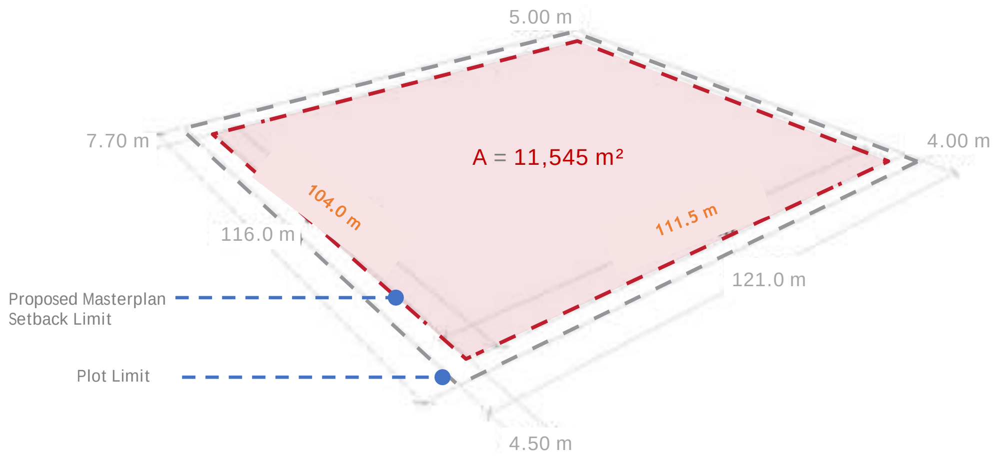
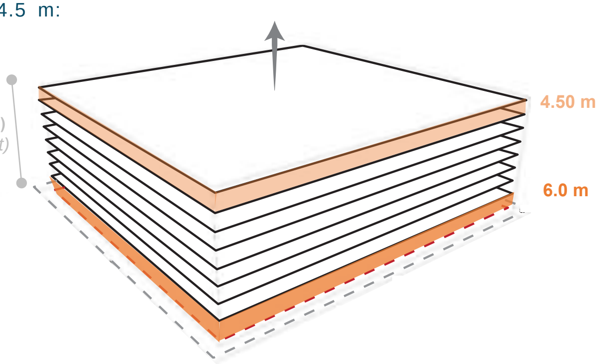
AREA STUDIES



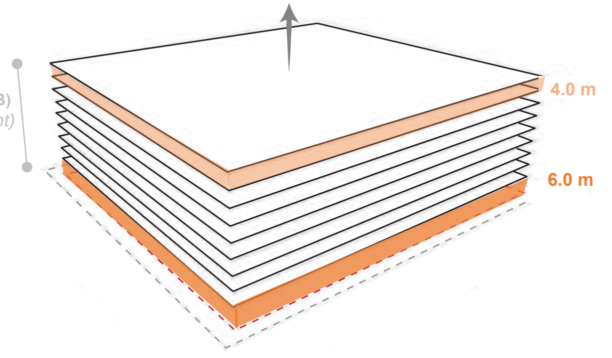
TYPICAL FLOOR @ 4.5 m:

[GF + 6]:



A = 11,545 m² x 7 = <u>80,815 m²</u>

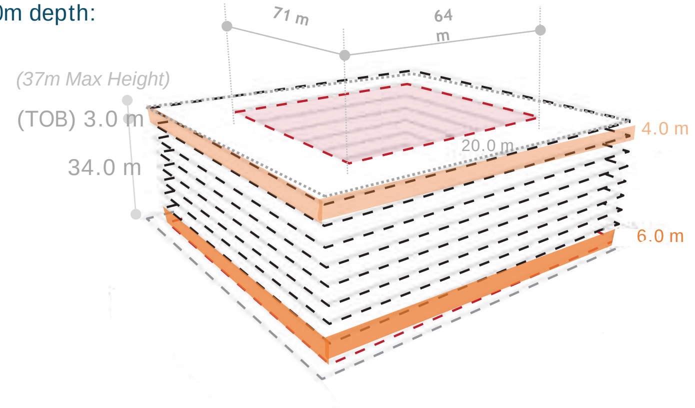
TYPICAL FLOOR @ 4.0m:
[GF + 7]:



A = 11,545 m² x 8 = <u>92,360 m²</u>

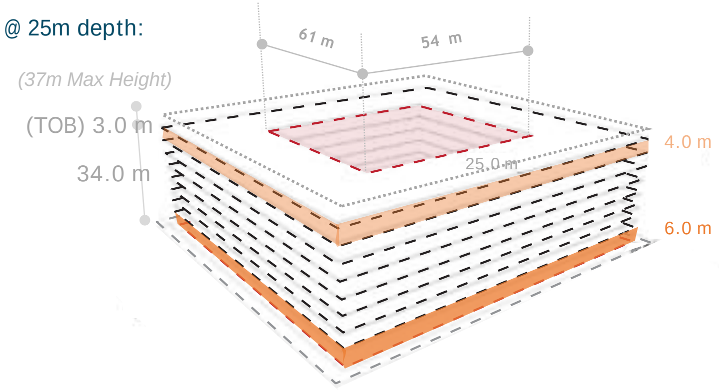
TYPICAL FLOOR @ 4.0 m:
[GF + 7]

@ 20m depth:

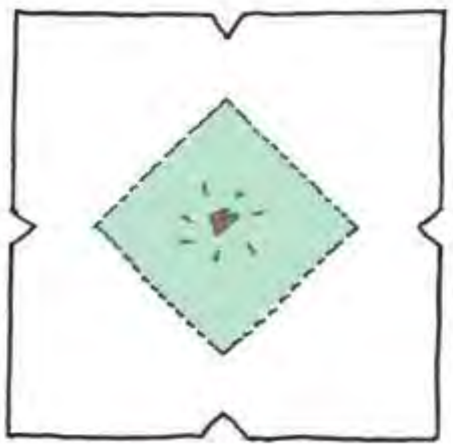


A = 7,030 m² x 8 =
<u>56,240 m²</u>

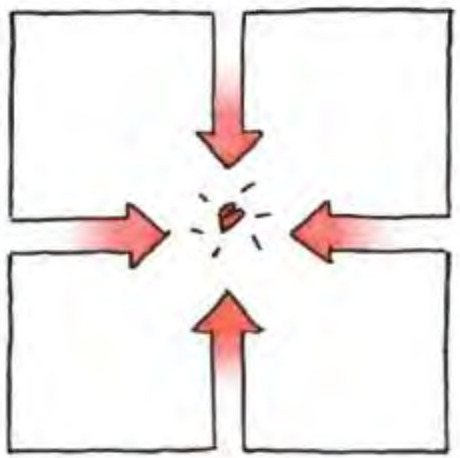
@ 25m depth:



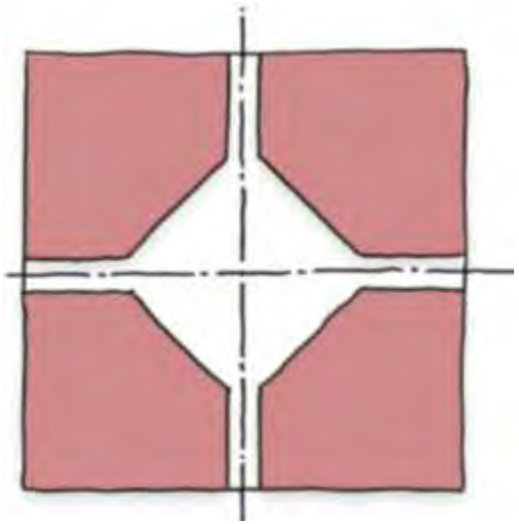
A = 8,290 m² x 8 =
<u>66,320 m²</u>



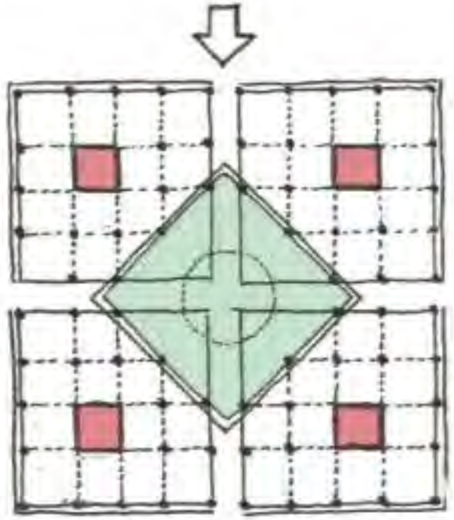
A green heart forms the central space of the building.



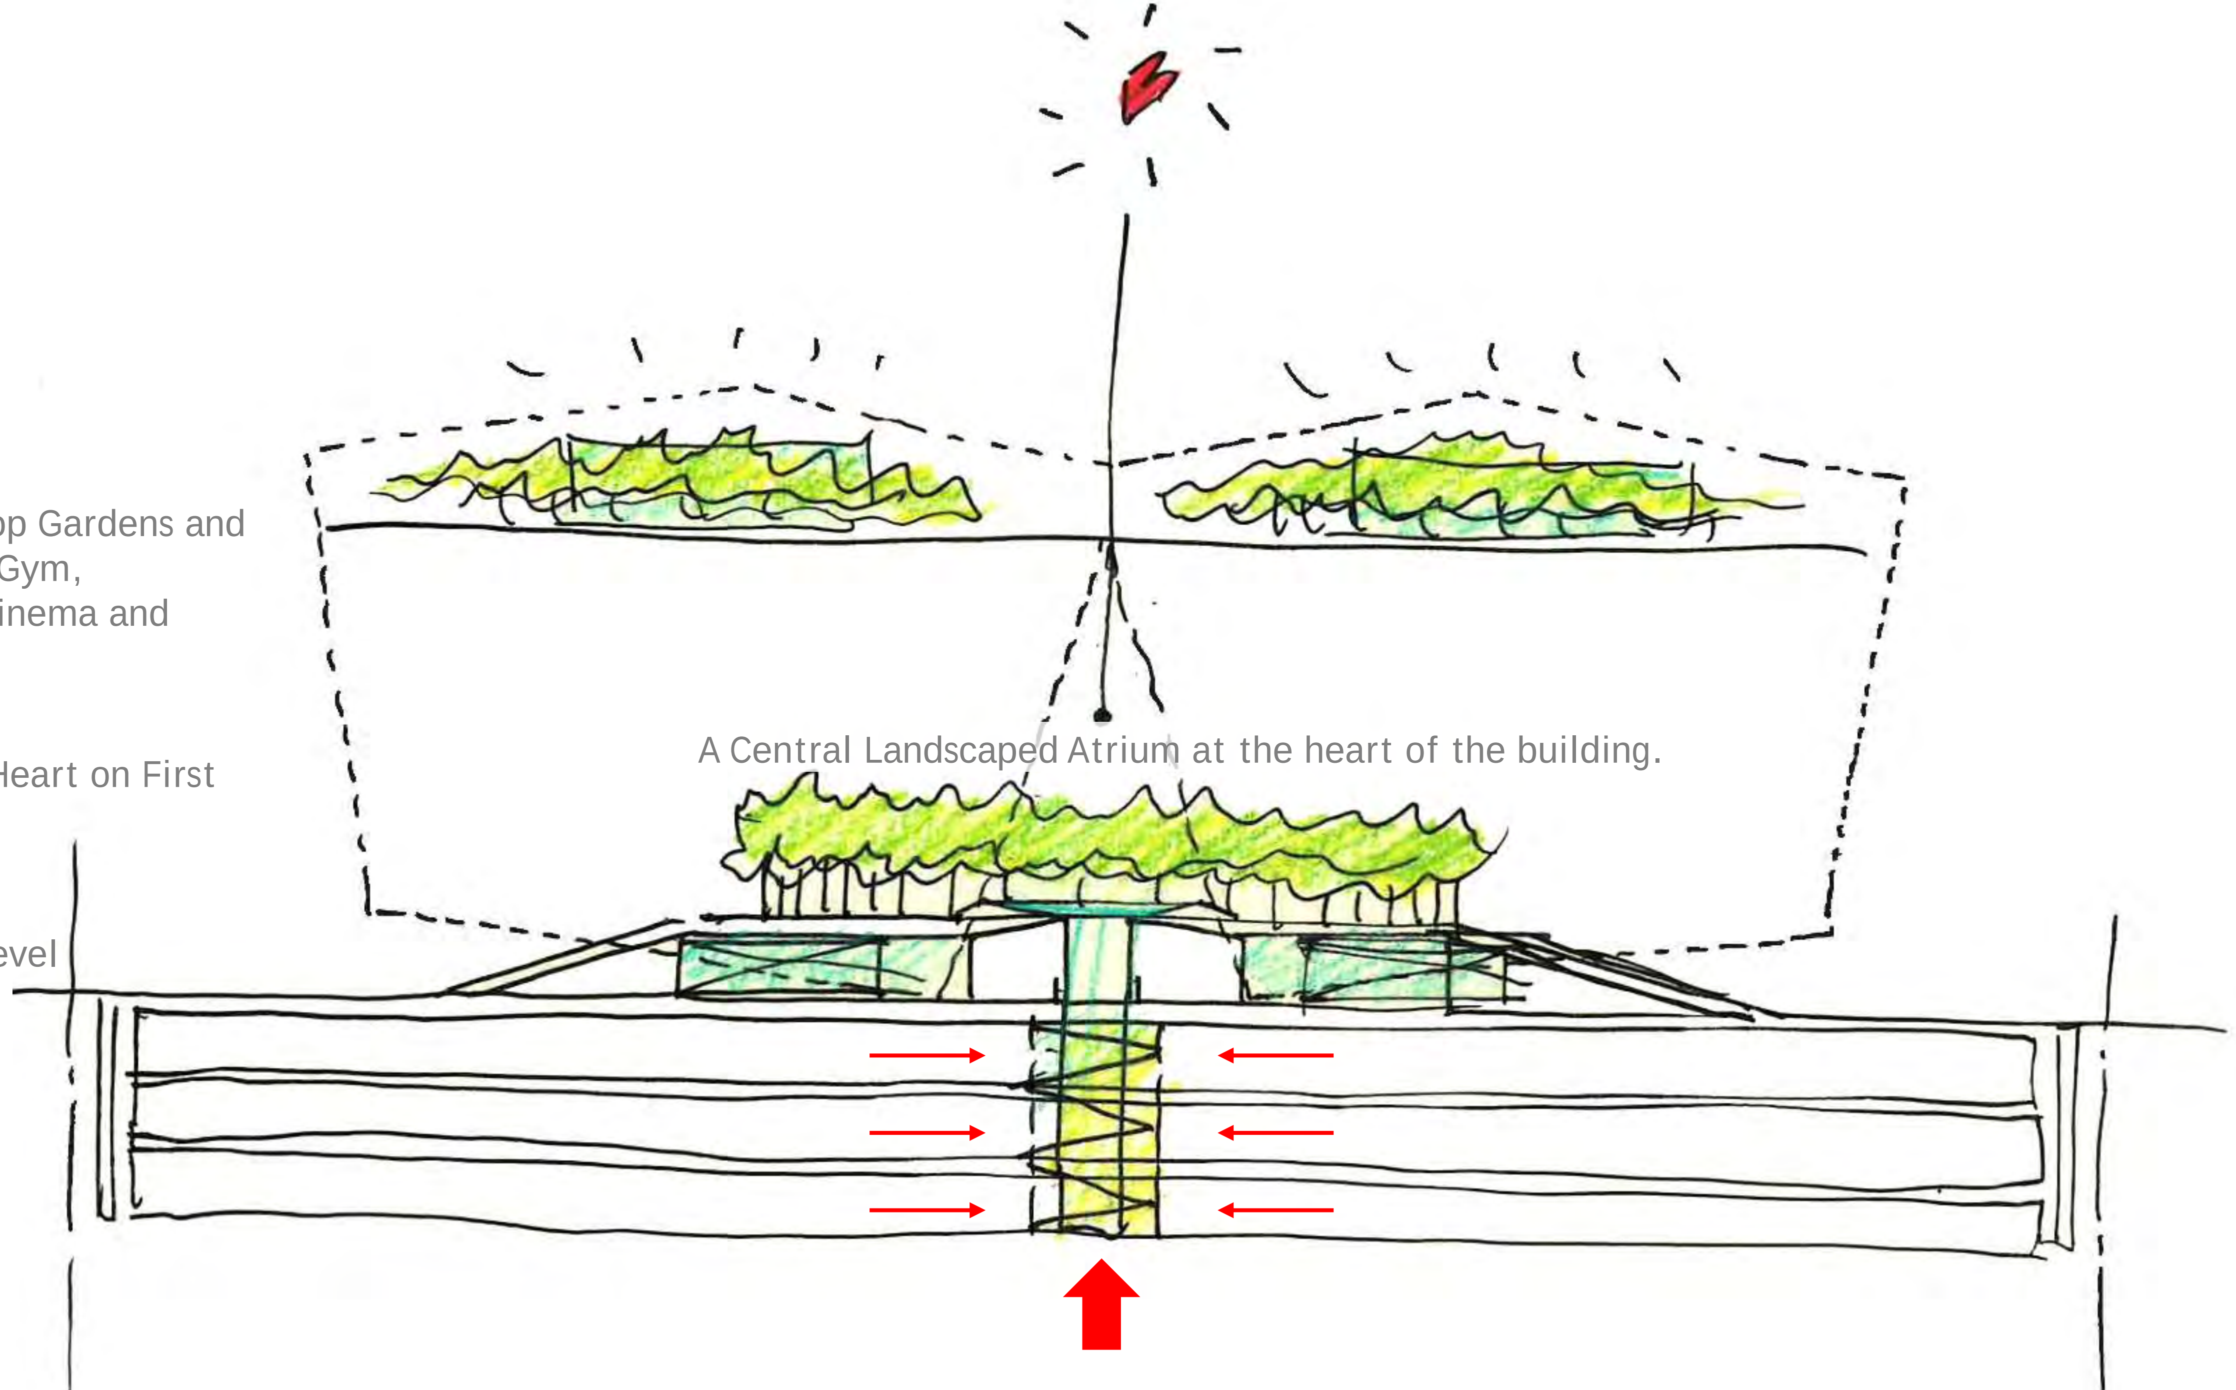
The Surrounding Site leaks in through the four major cracks in the four sides of the building



The building is divided into 4 components/ departments that come together at a green heart.



Four Vertical circulation cores provide independent department buildings, which connect to deliver one HQ building.



Flexible Rooftop Gardens and Event Spaces: Gym, Restaurants, Cinema and Entertainment
A Central Landscaped Atrium at the heart of the building.
Raised Green Heart on First Floor

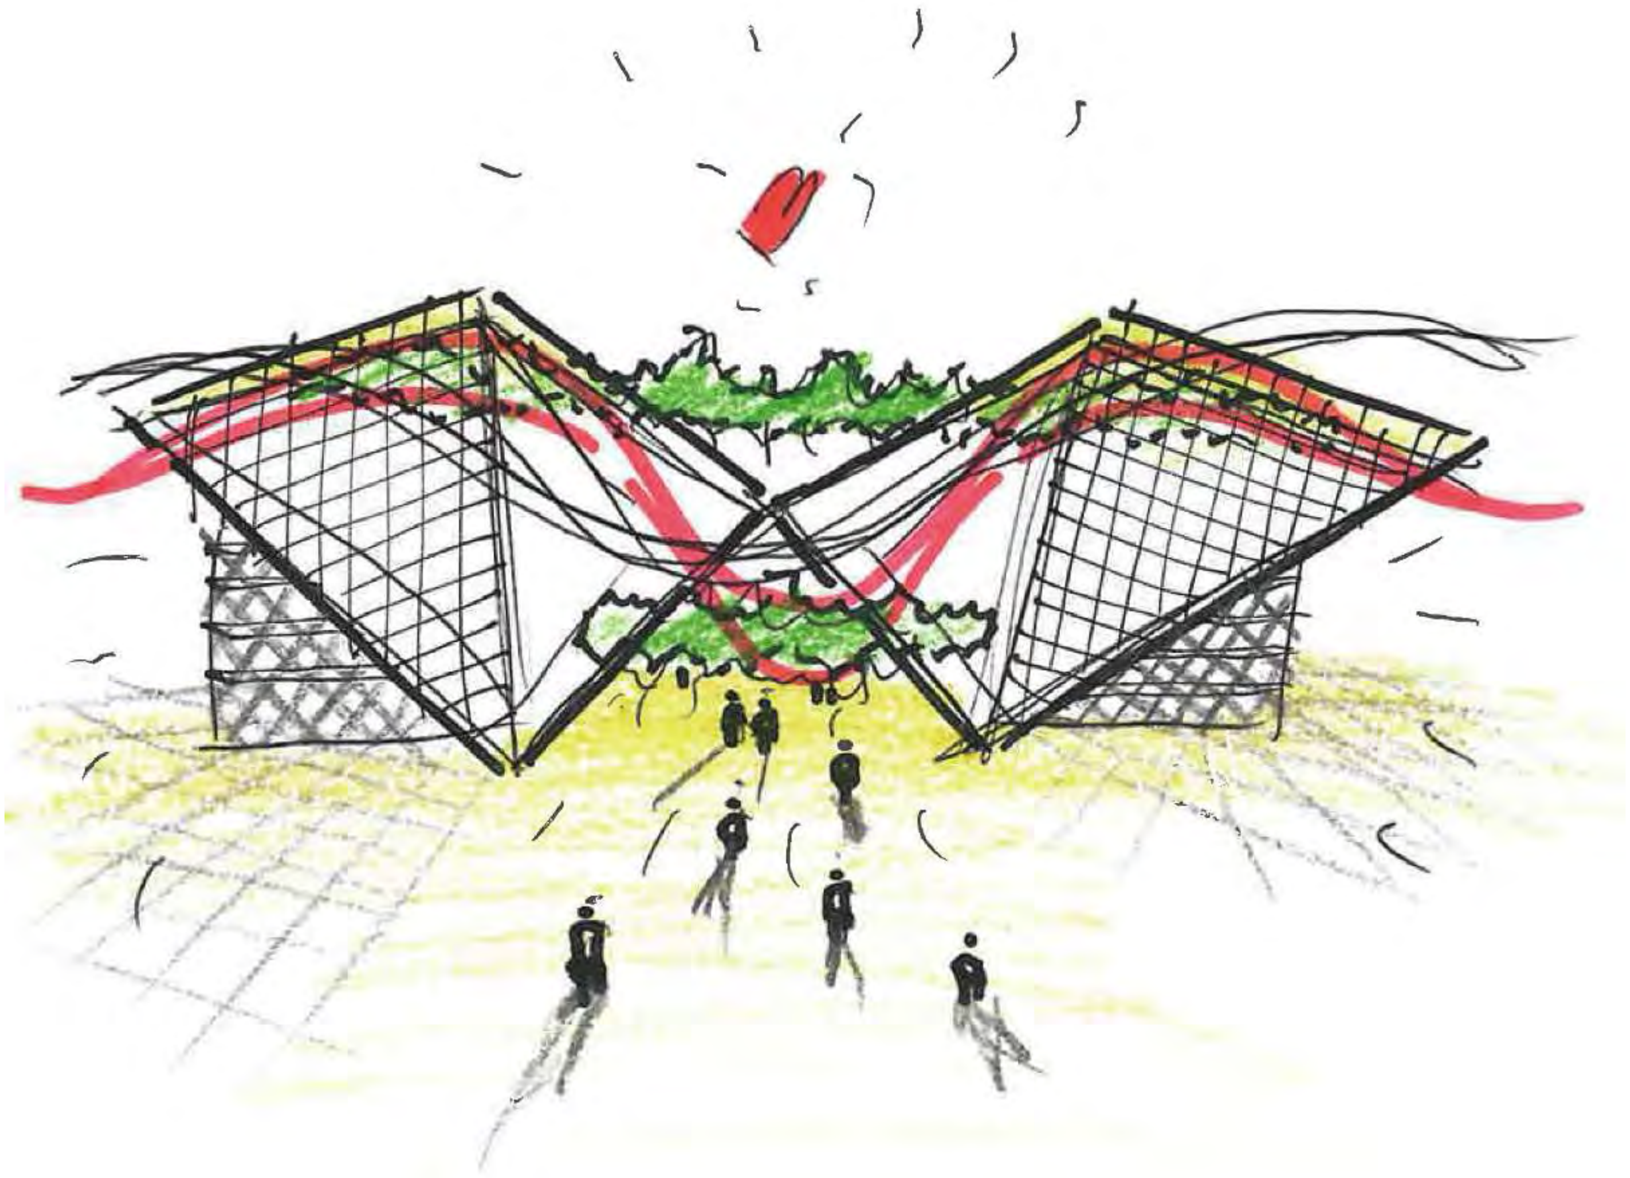
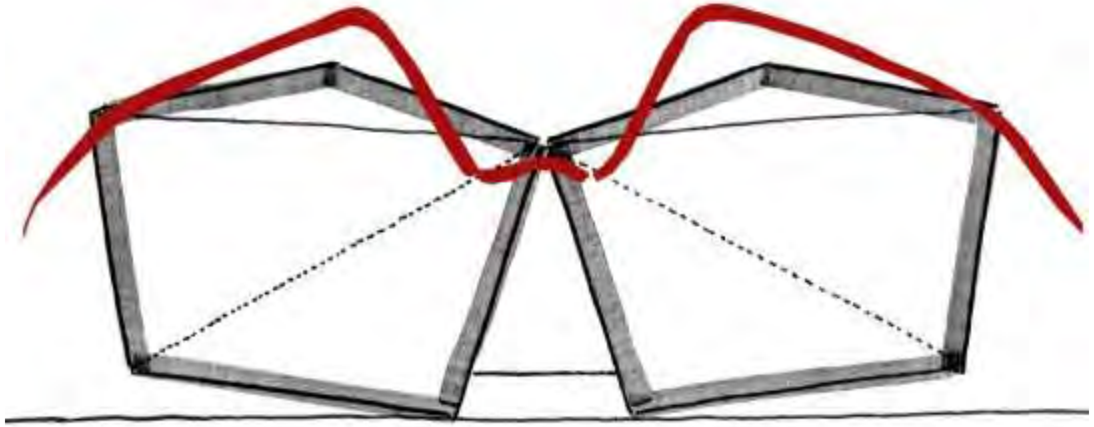
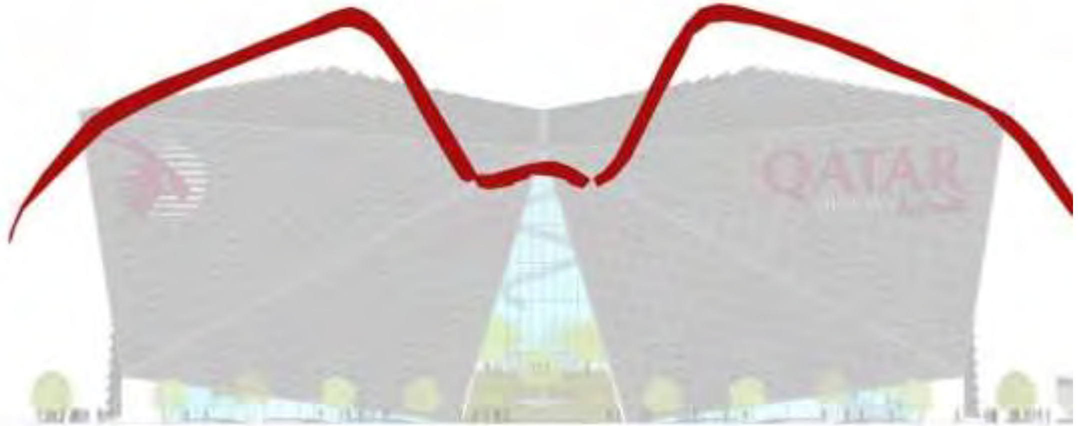
The Falcon .... Qatar's National Bird

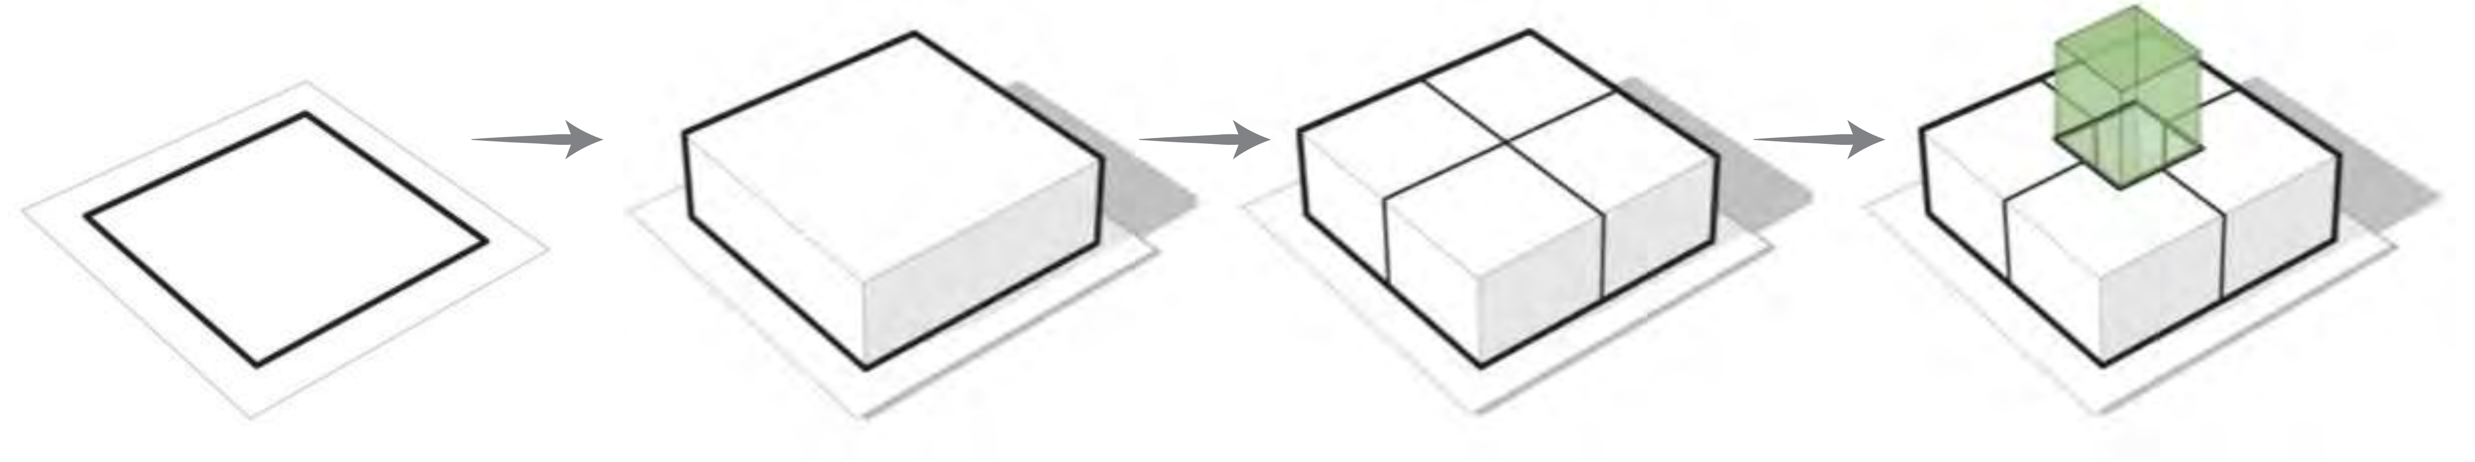




Creating the building form



Alluding to flight ...

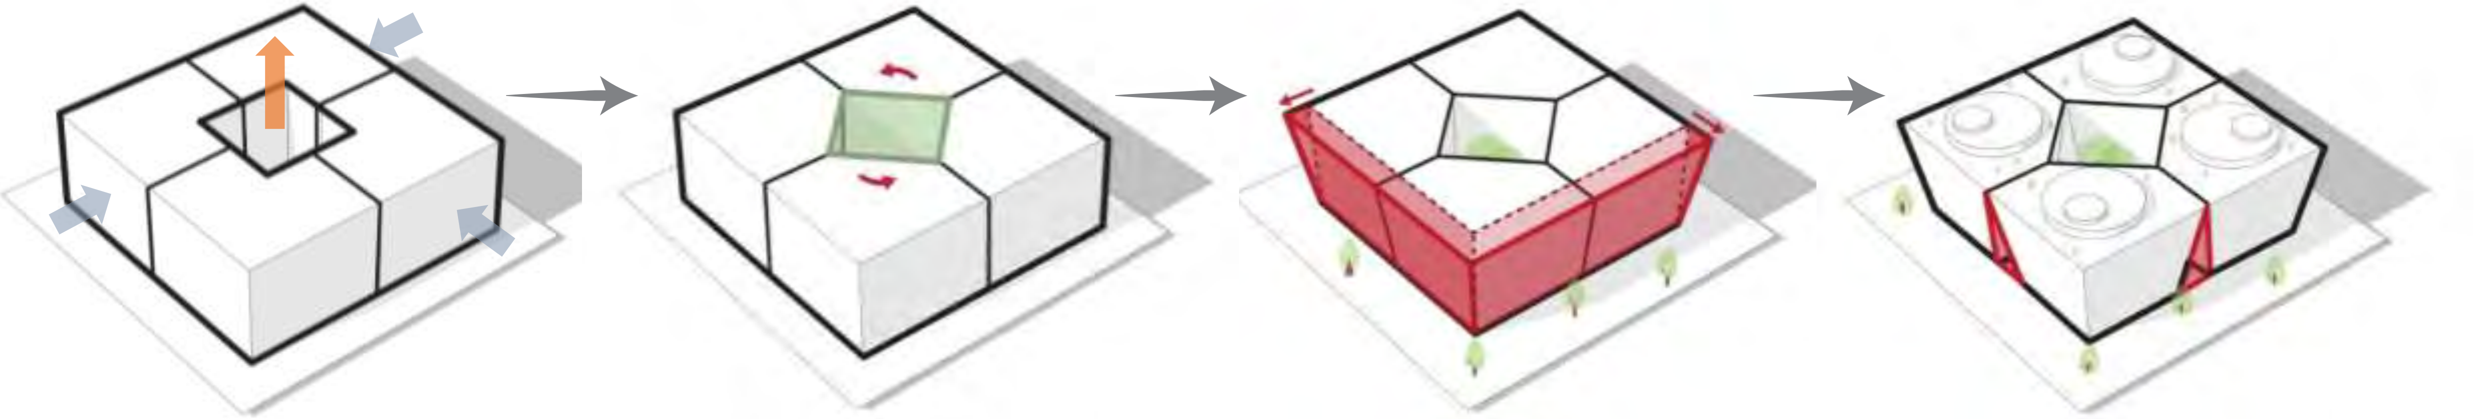


Maximum Build Plot

Maximum Plot Development.

into 4 equal paPlot divided
rts.

Creating efficient office floor plates
creates a central atrium.

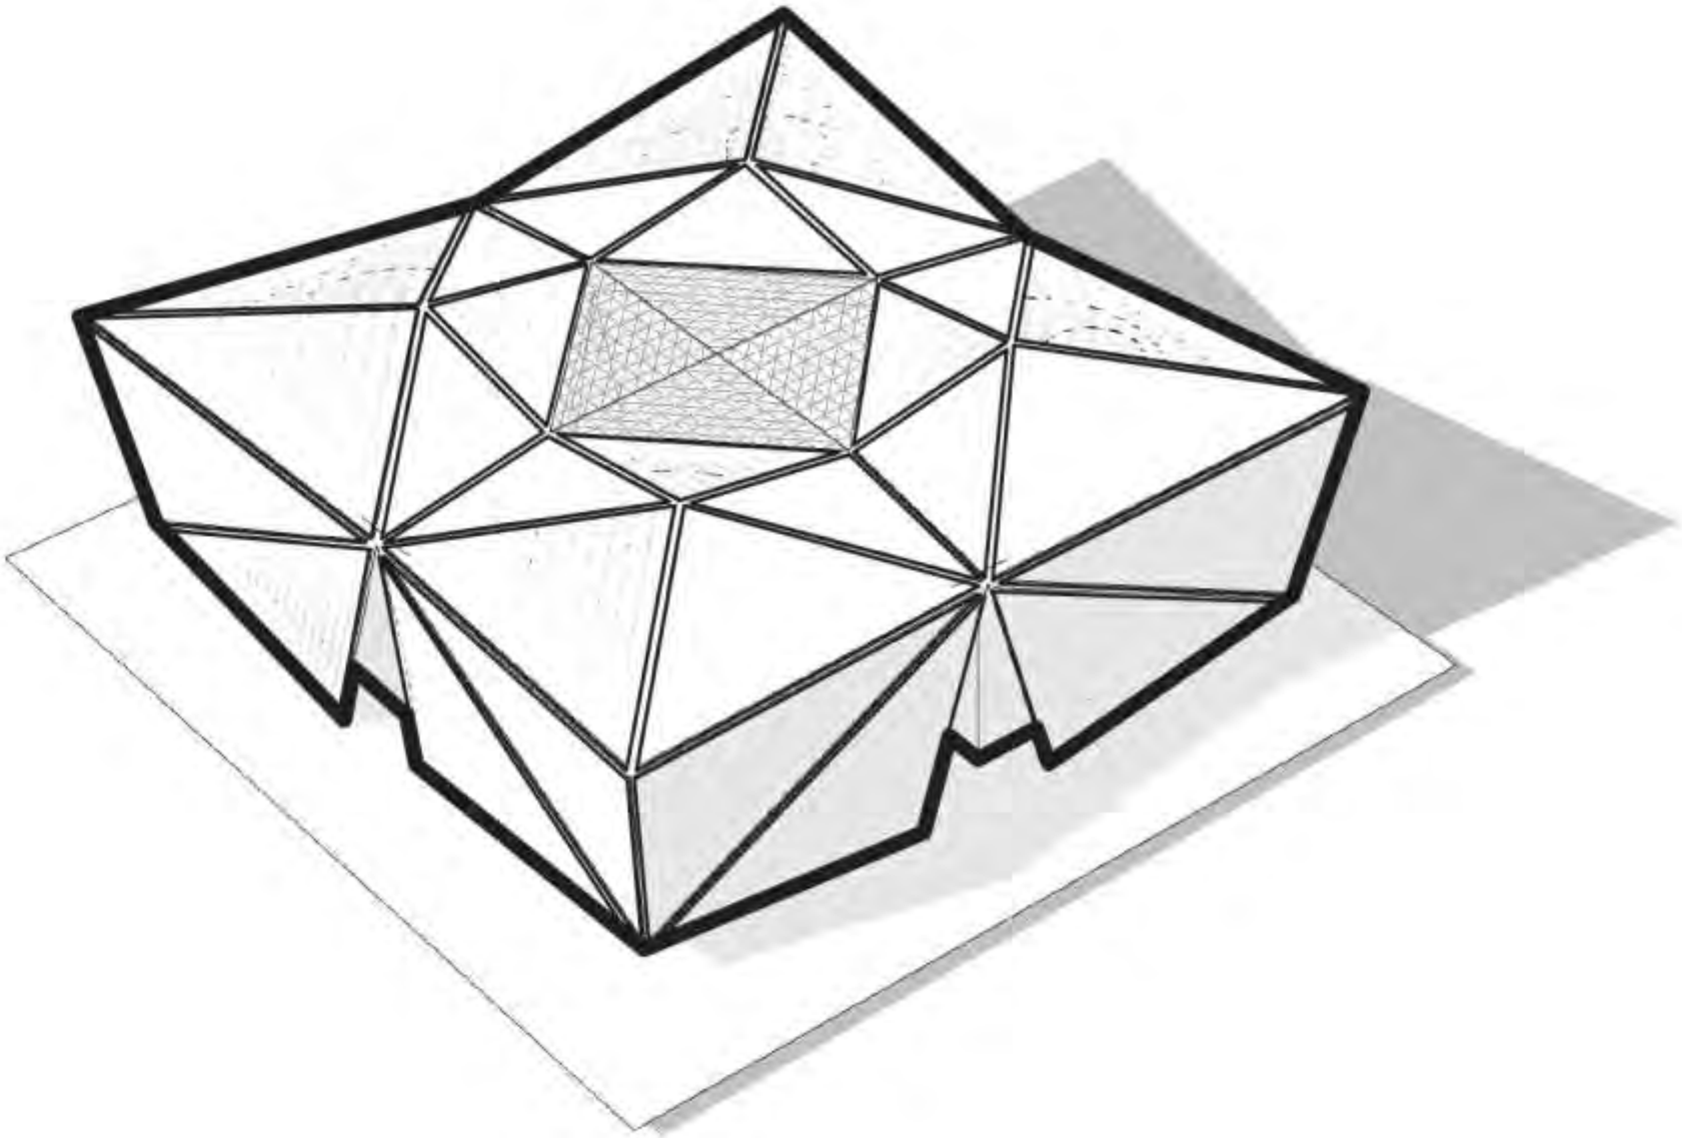


Atrium naturally ventilates
Office floor plates

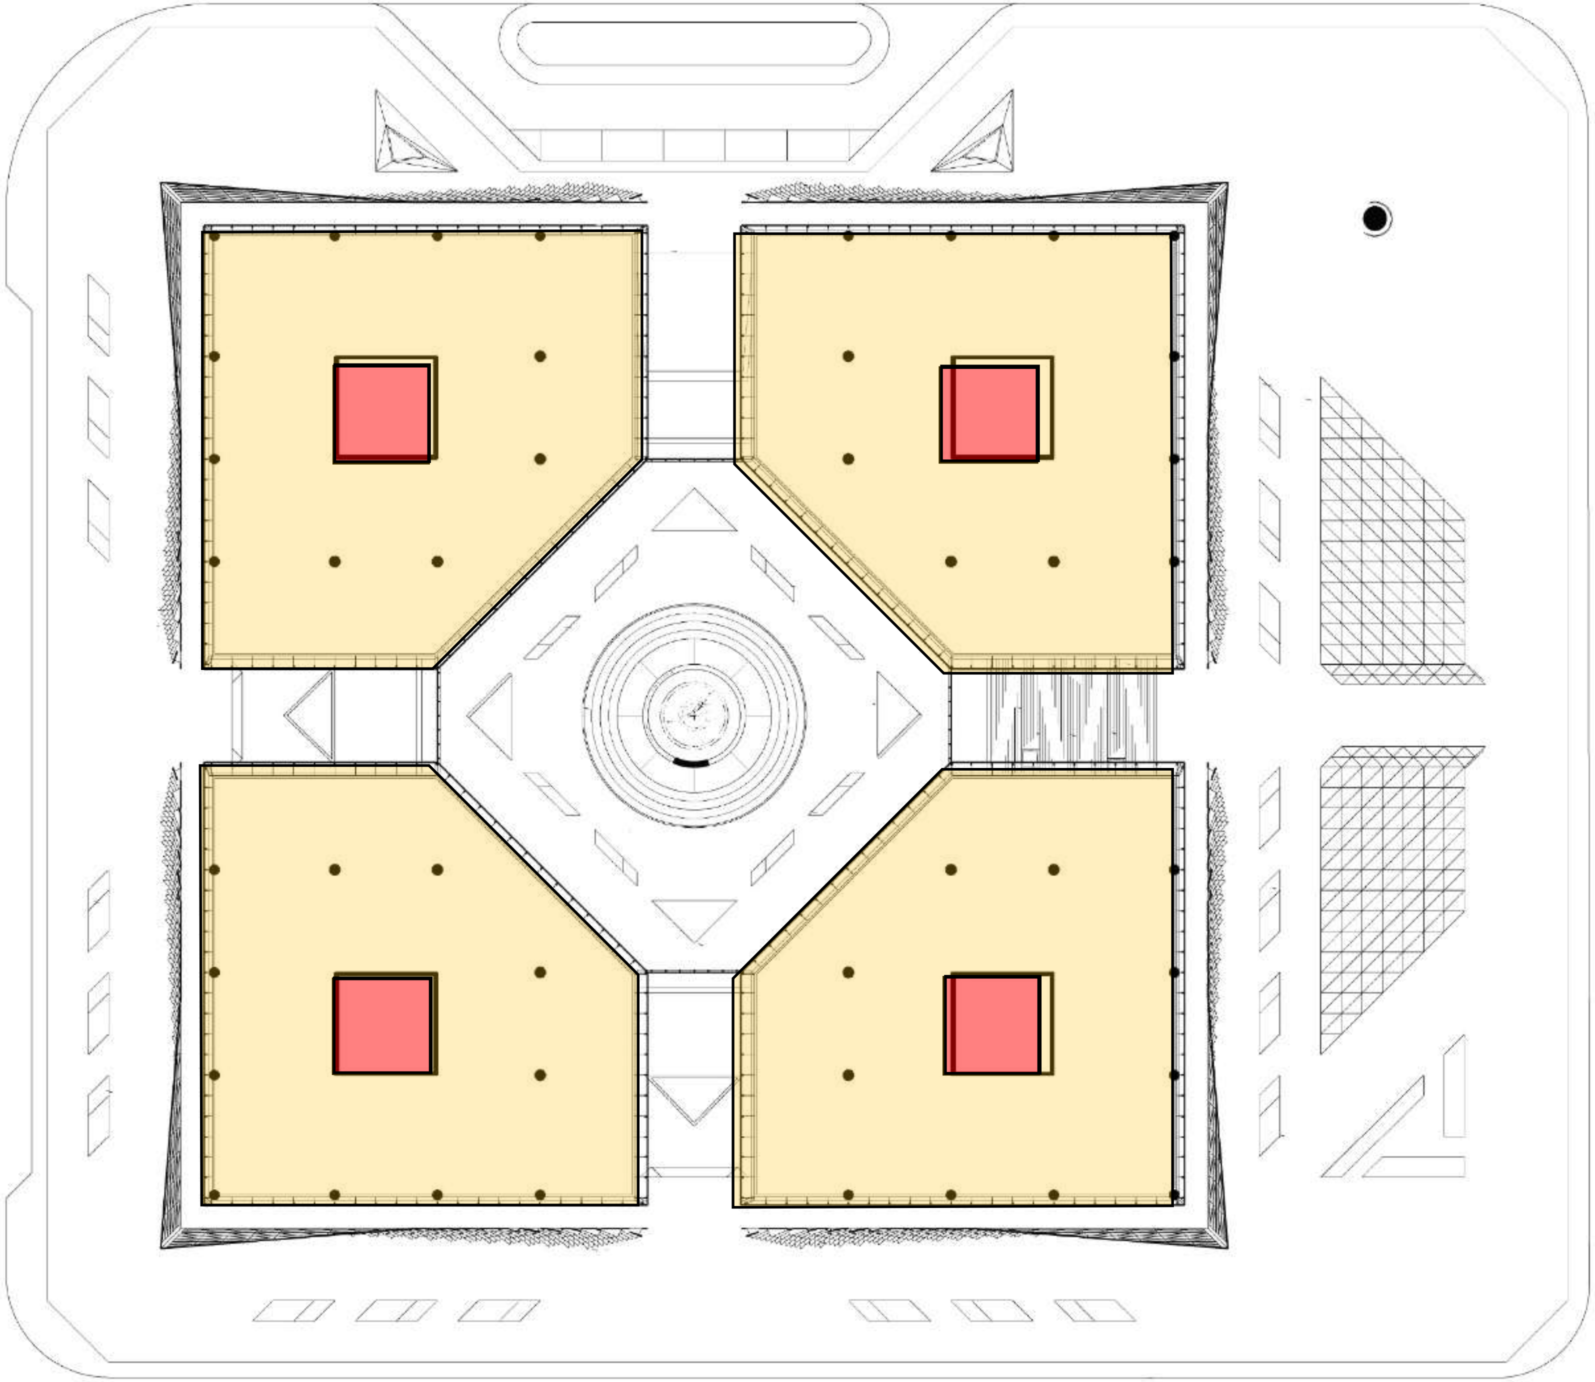
Atrium is rotated 45 degrees
to allow connection to
entrances

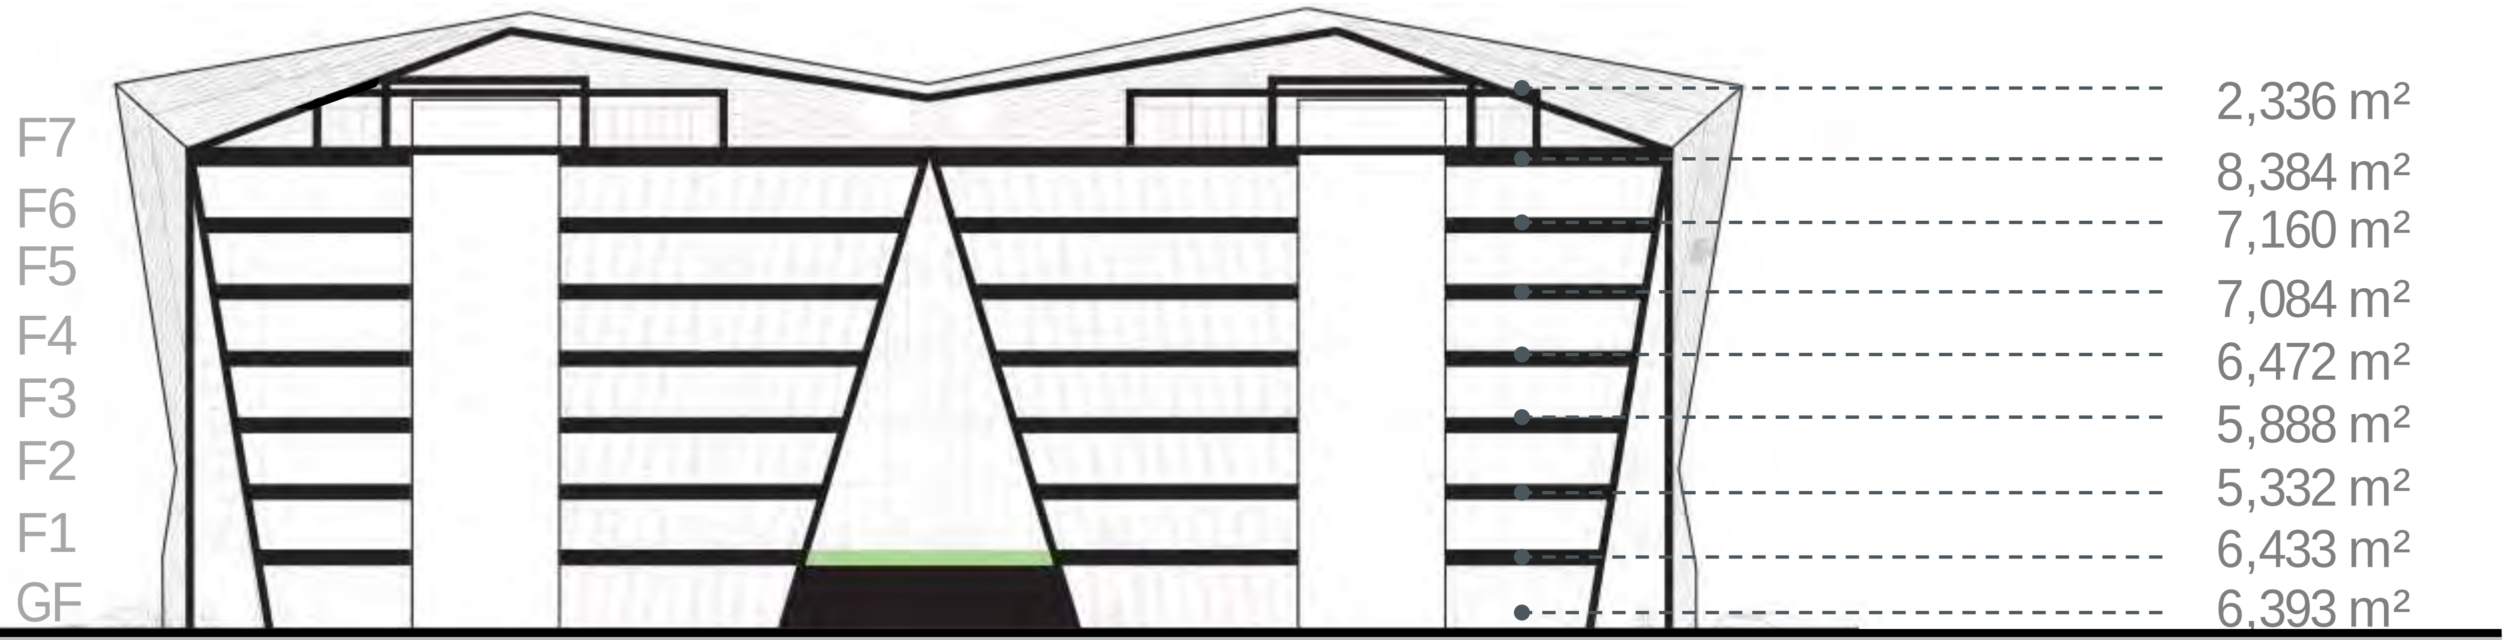
The façade leans out to
increase solar shading and
maximize upper floor plates.

Triangular spaces connect each
entrance to the central atrium and
unite all four departments.



External Solar shading is faceted to create shaded spaces at rooftop and reduce the cooling required for the building.





TOTAL BUILT UP AREA = 55,482 m²
