MONTH 2020

QATAR AIRWAYS HEADQUATER

TABLE OF CONTENTS

THE SITE

OPTION 1 – THE CLOUD

OPTION 2 – THE DIAGONAL

OPTION 3 – THE FALCON

OPTION 4 – THE CIRCLE

ALL OPTIONS

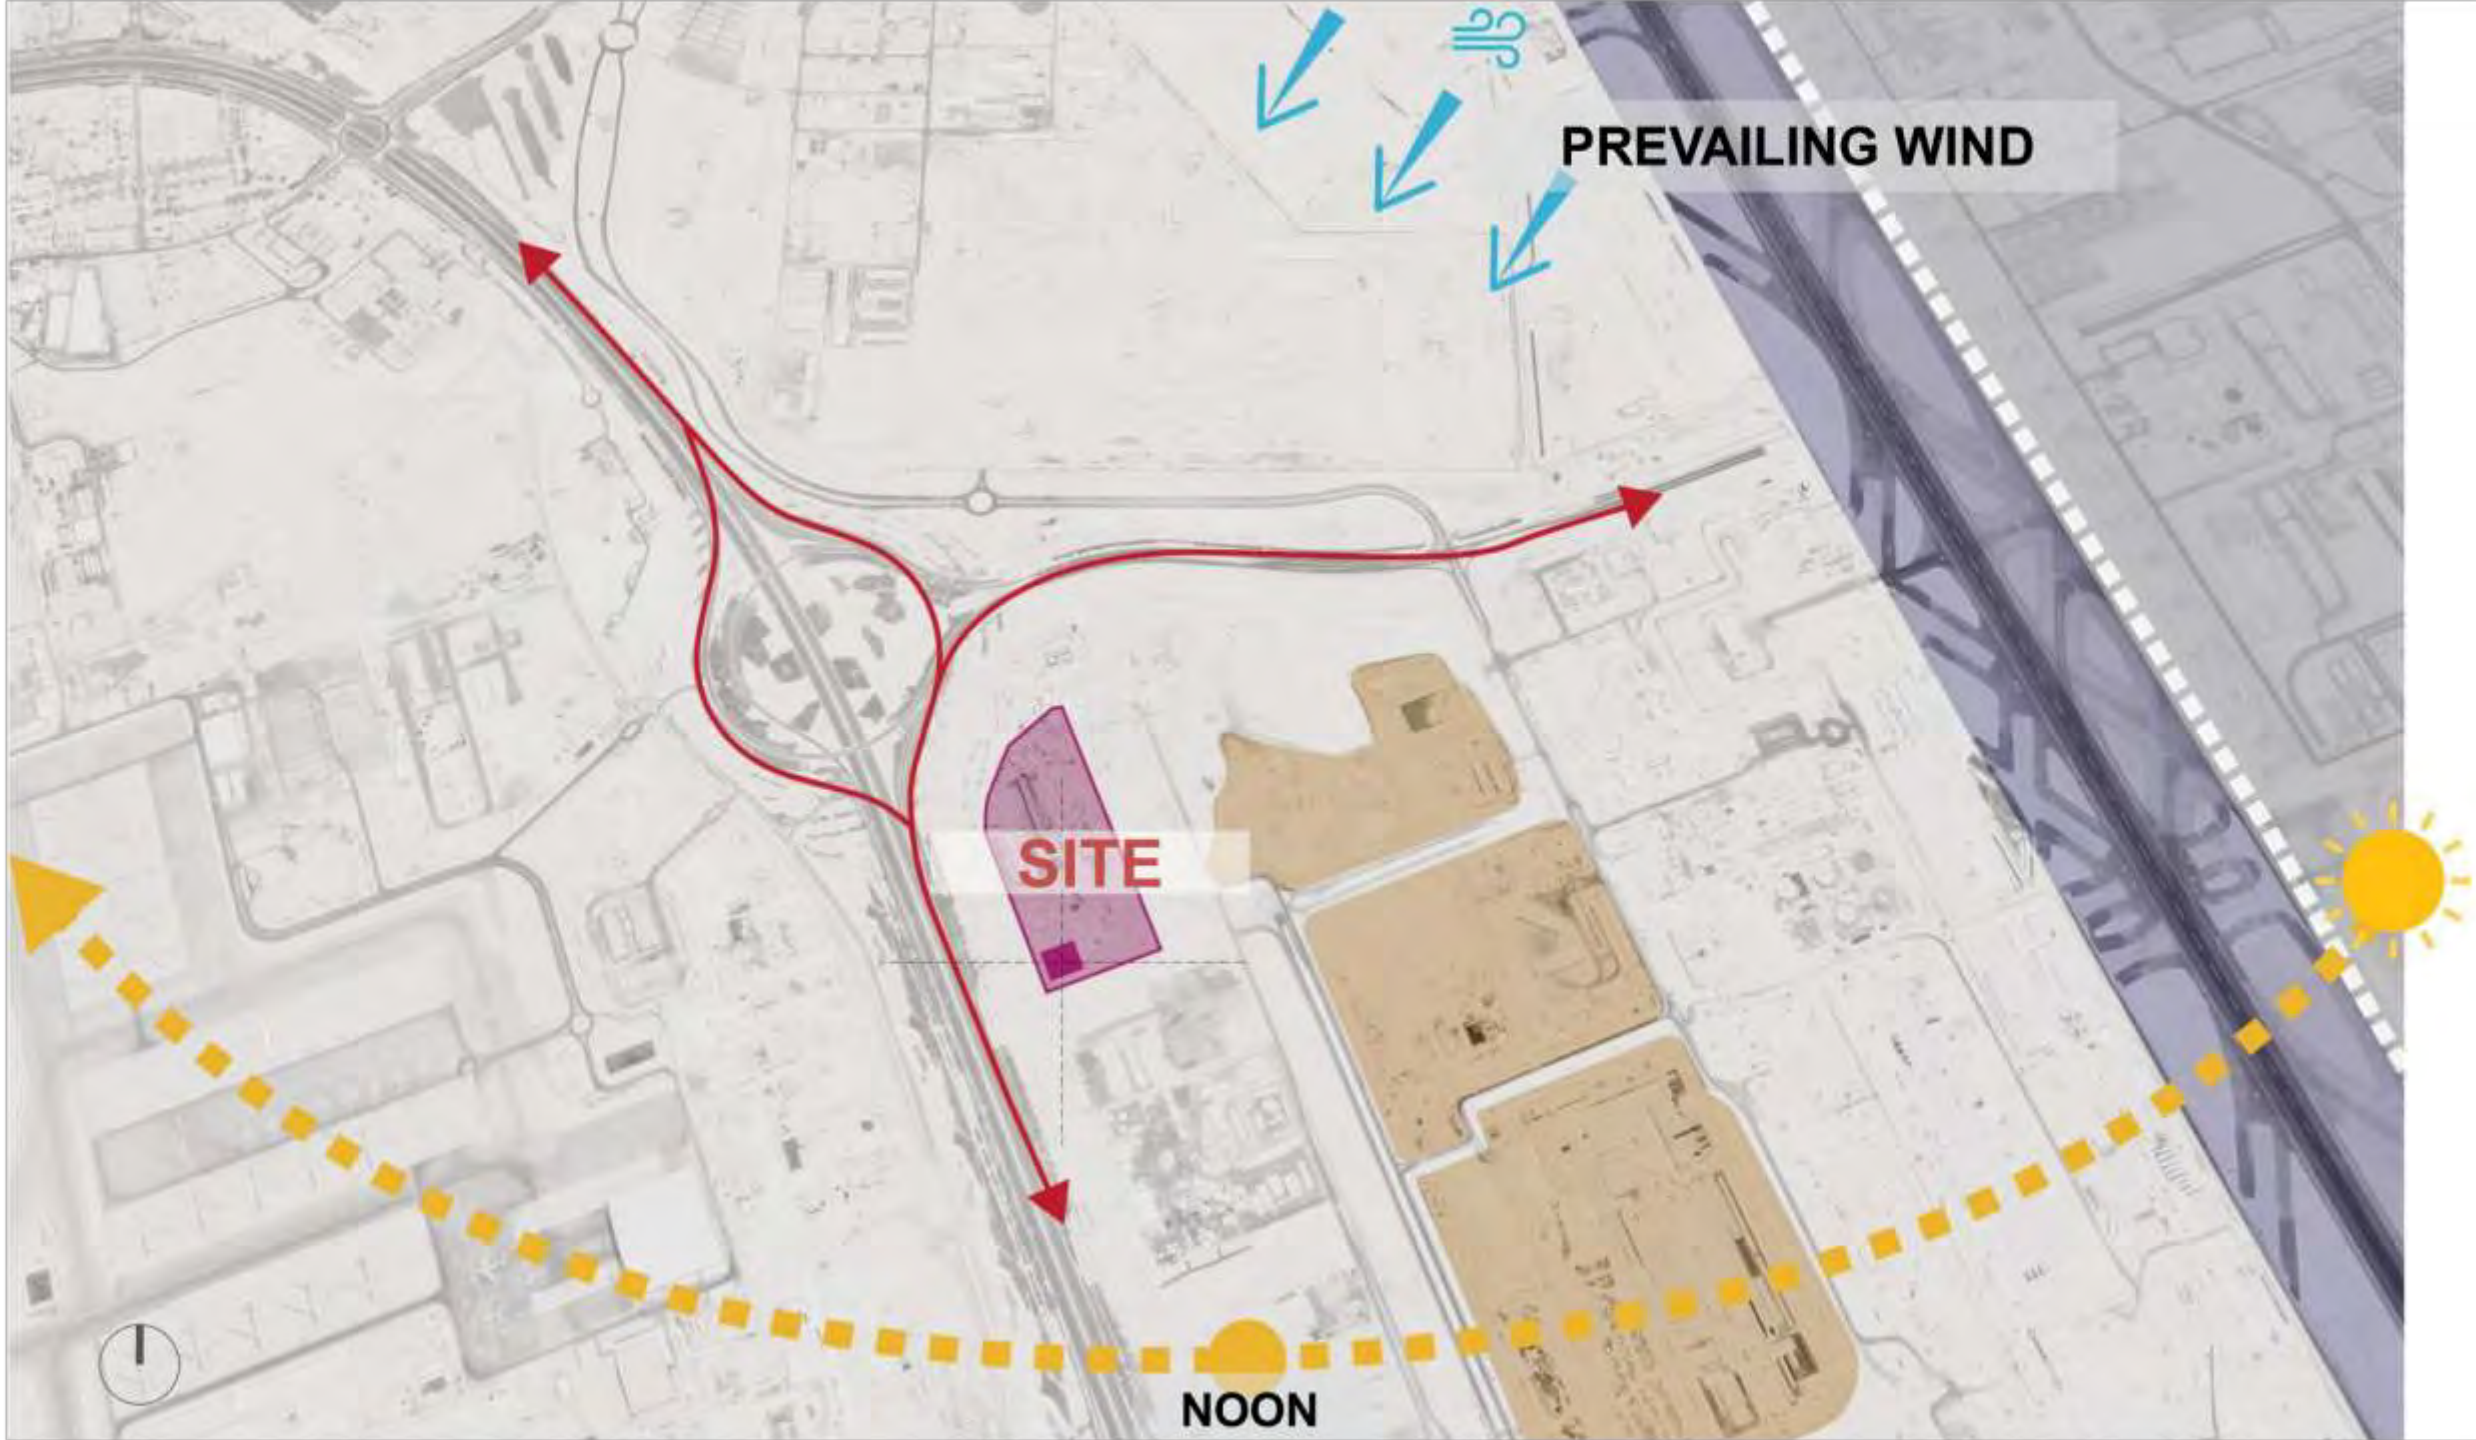

THE SITE

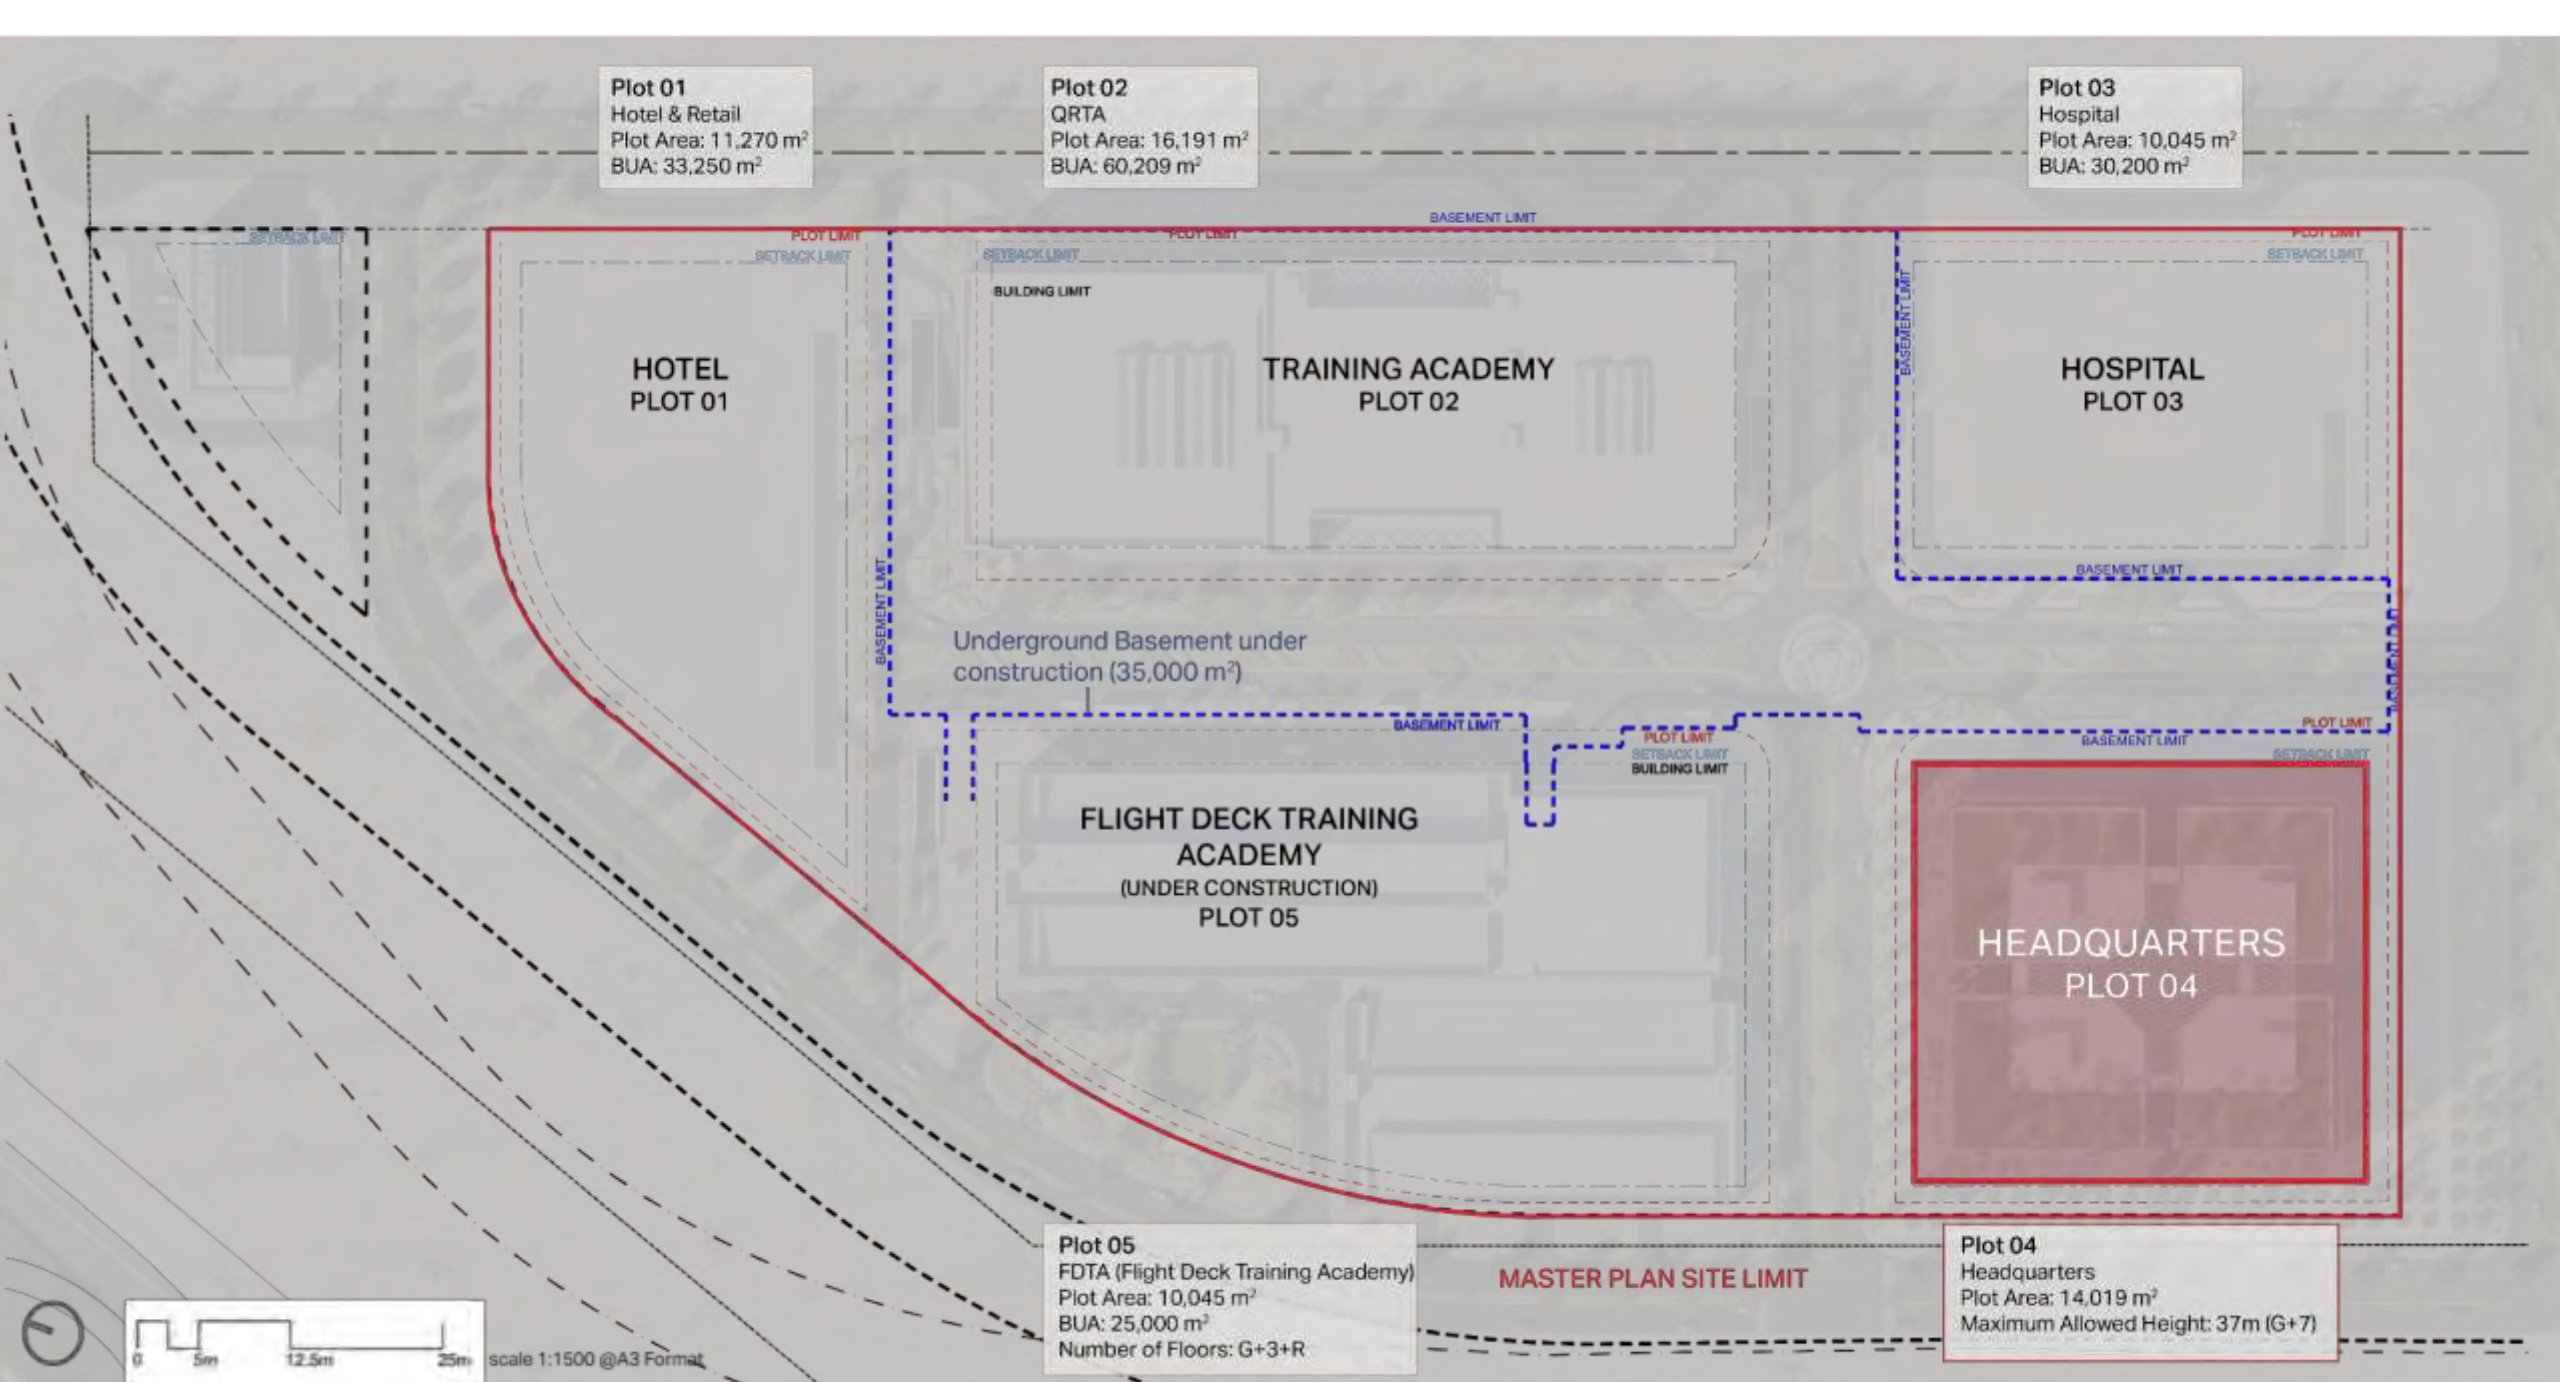

Doha

Headquarters Complex Site 100,000m²

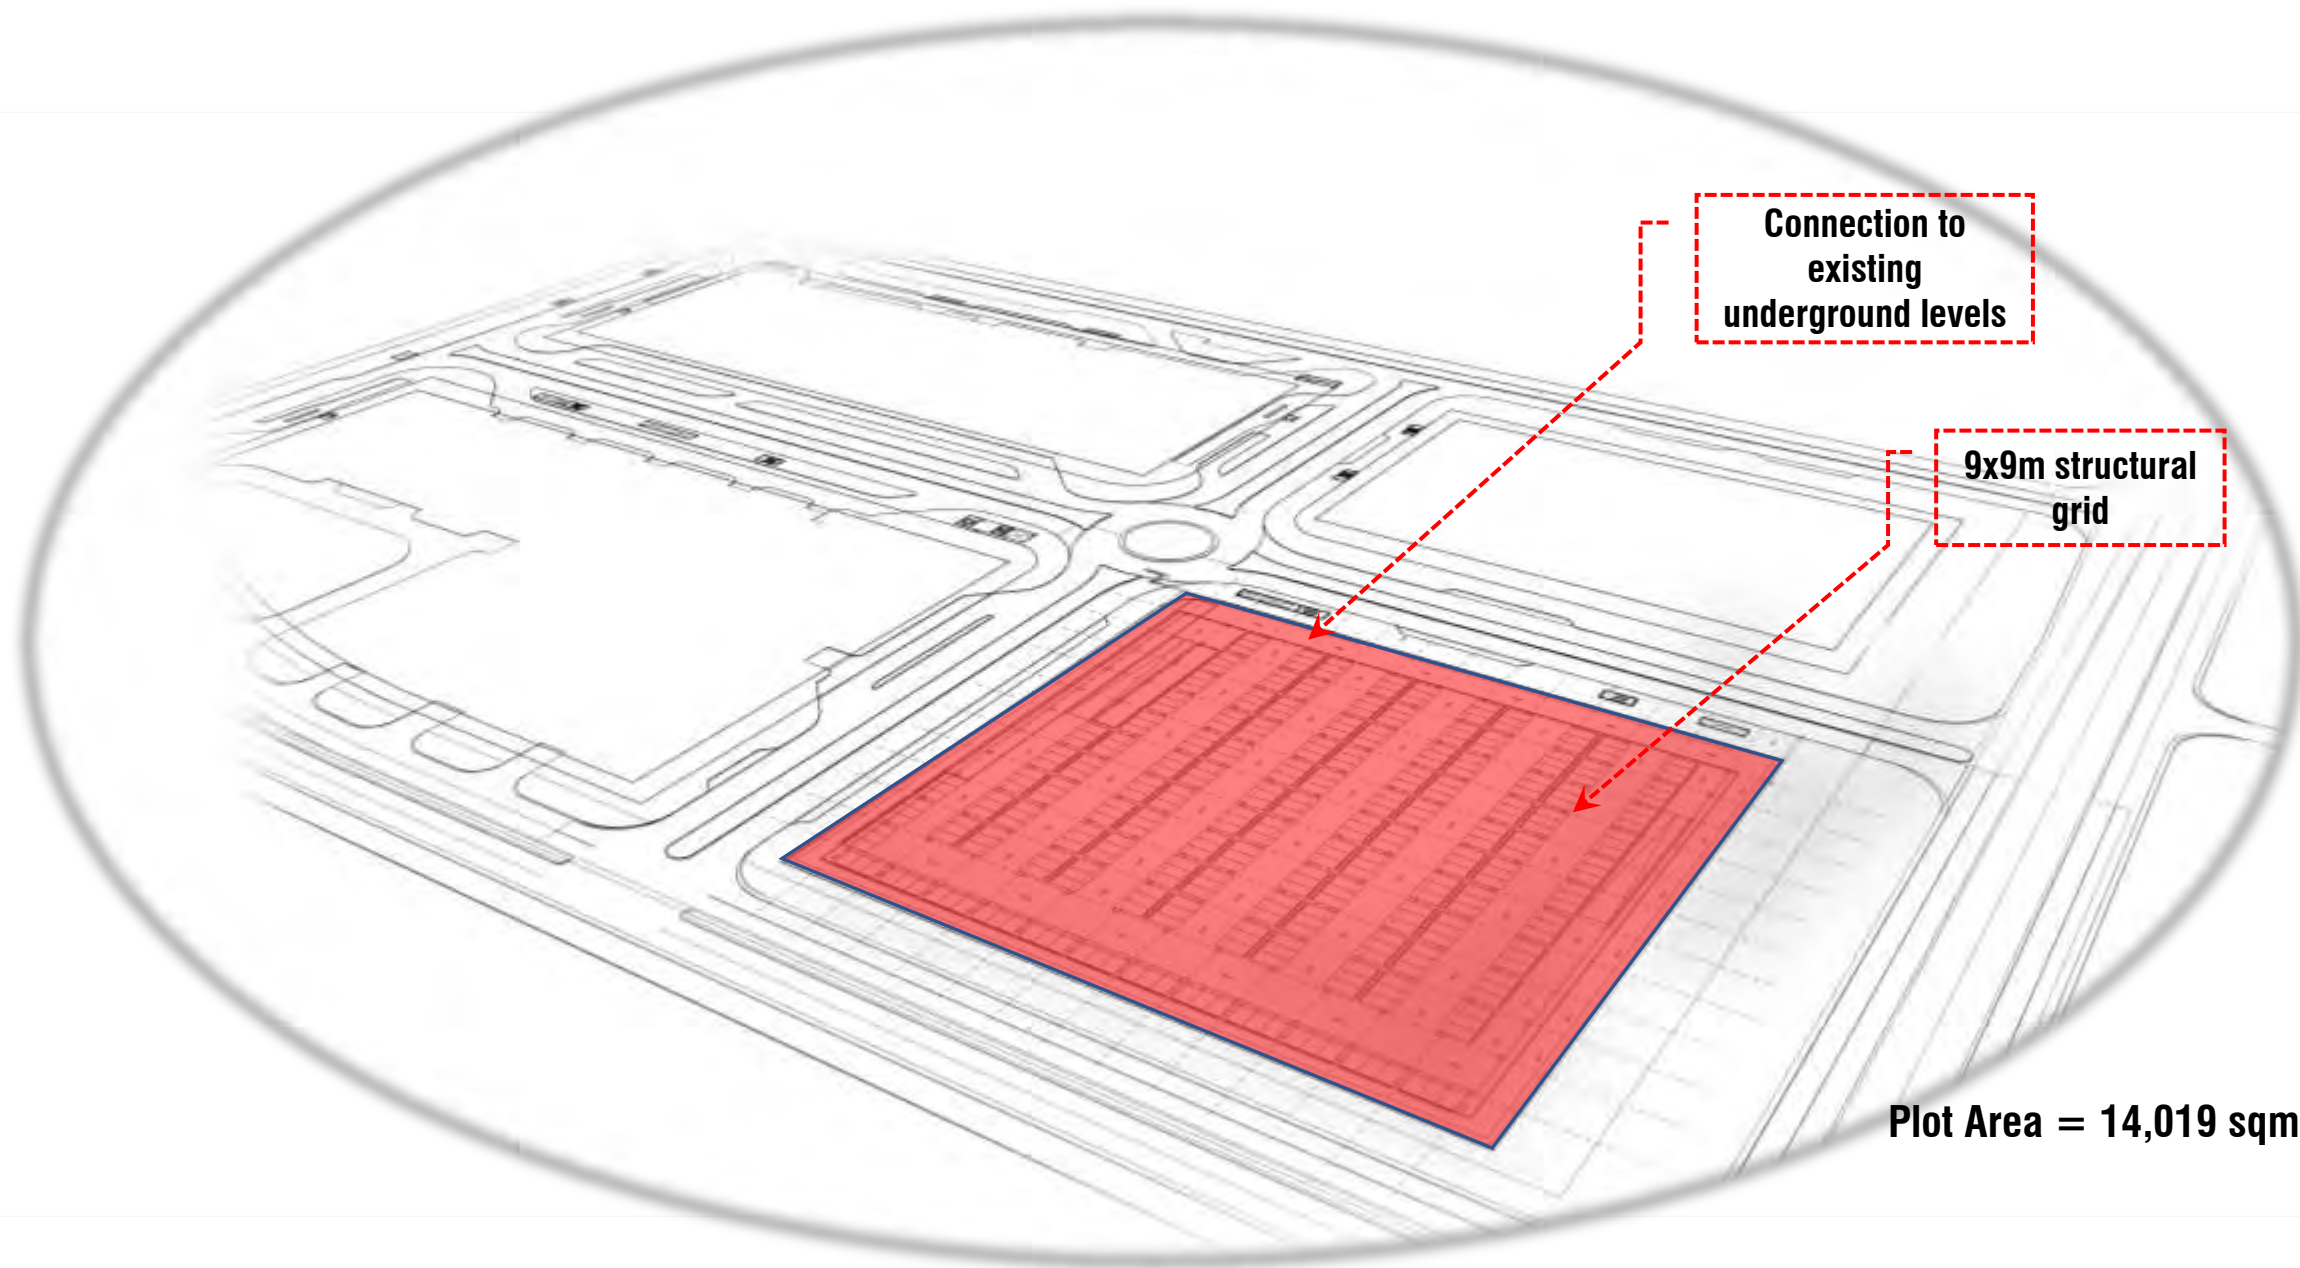

Proposed underground basement (71,500 m²) to include Plot 01 & Plot 04

OPTION 2

THE DIAGONAL

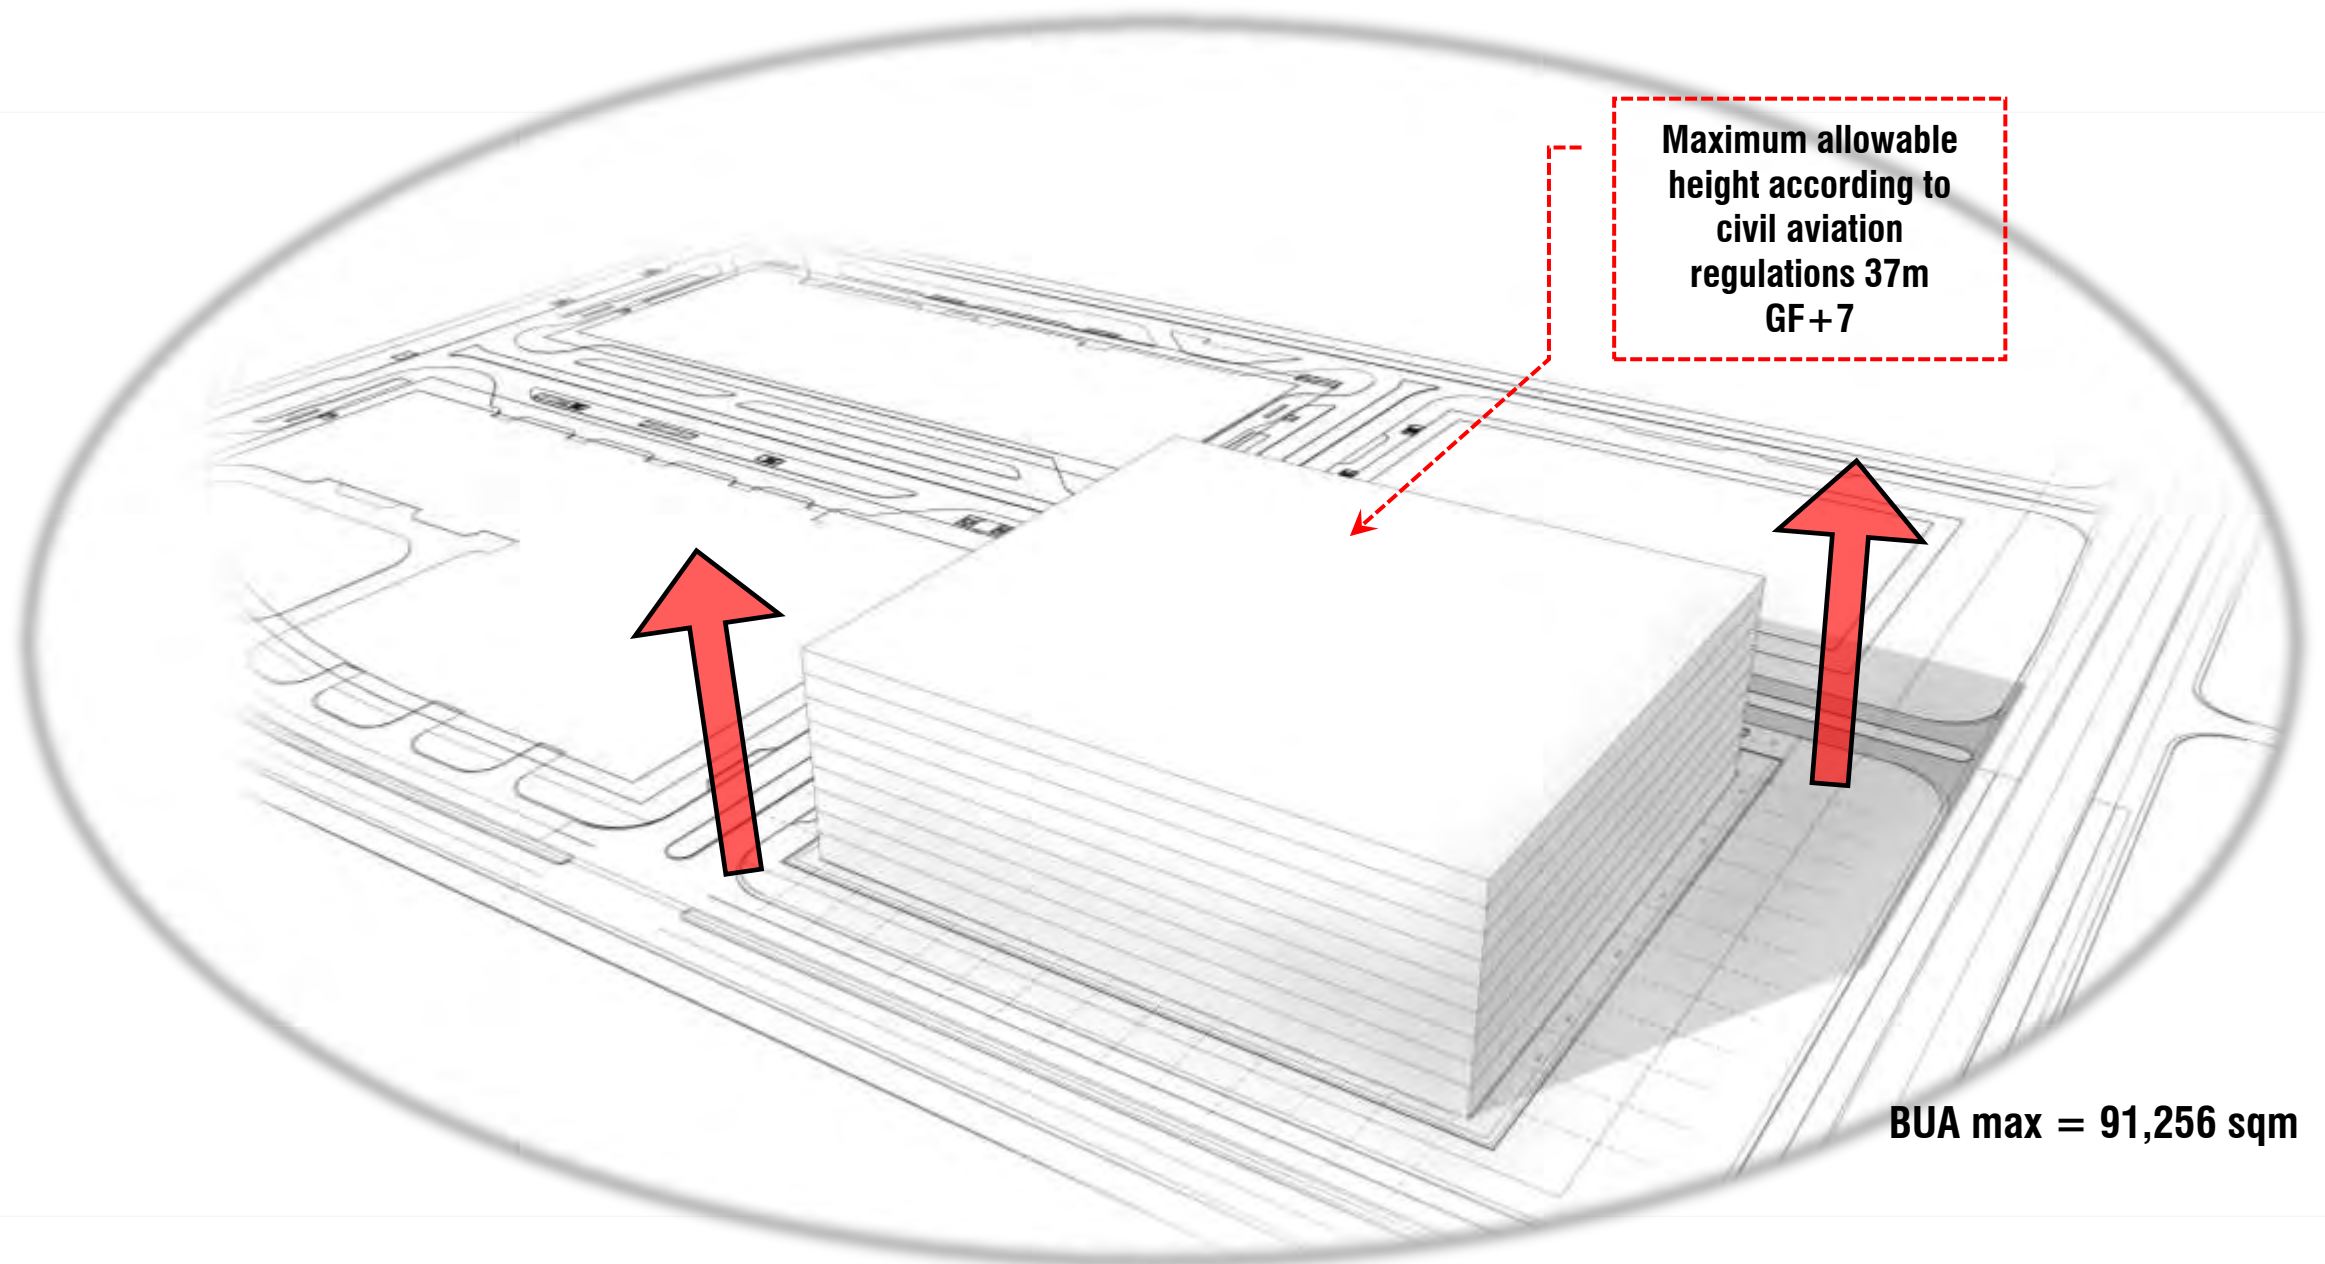

Connection to
existing
underground levels

9x9m structural
grid

Plot Area = 14,019 sqm

VOLUME DEVELOPMENT

Maximum allowable
height according to
civil aviation
regulations 37m
GF+7

BUA max = 91,256 sqm

VOLUME DEVELOPMENT

A diagonal rift is carved out the center of the volume creating an active street and maximizing the natural light and ventilation entering the building.

BUA = 72,640 sqm

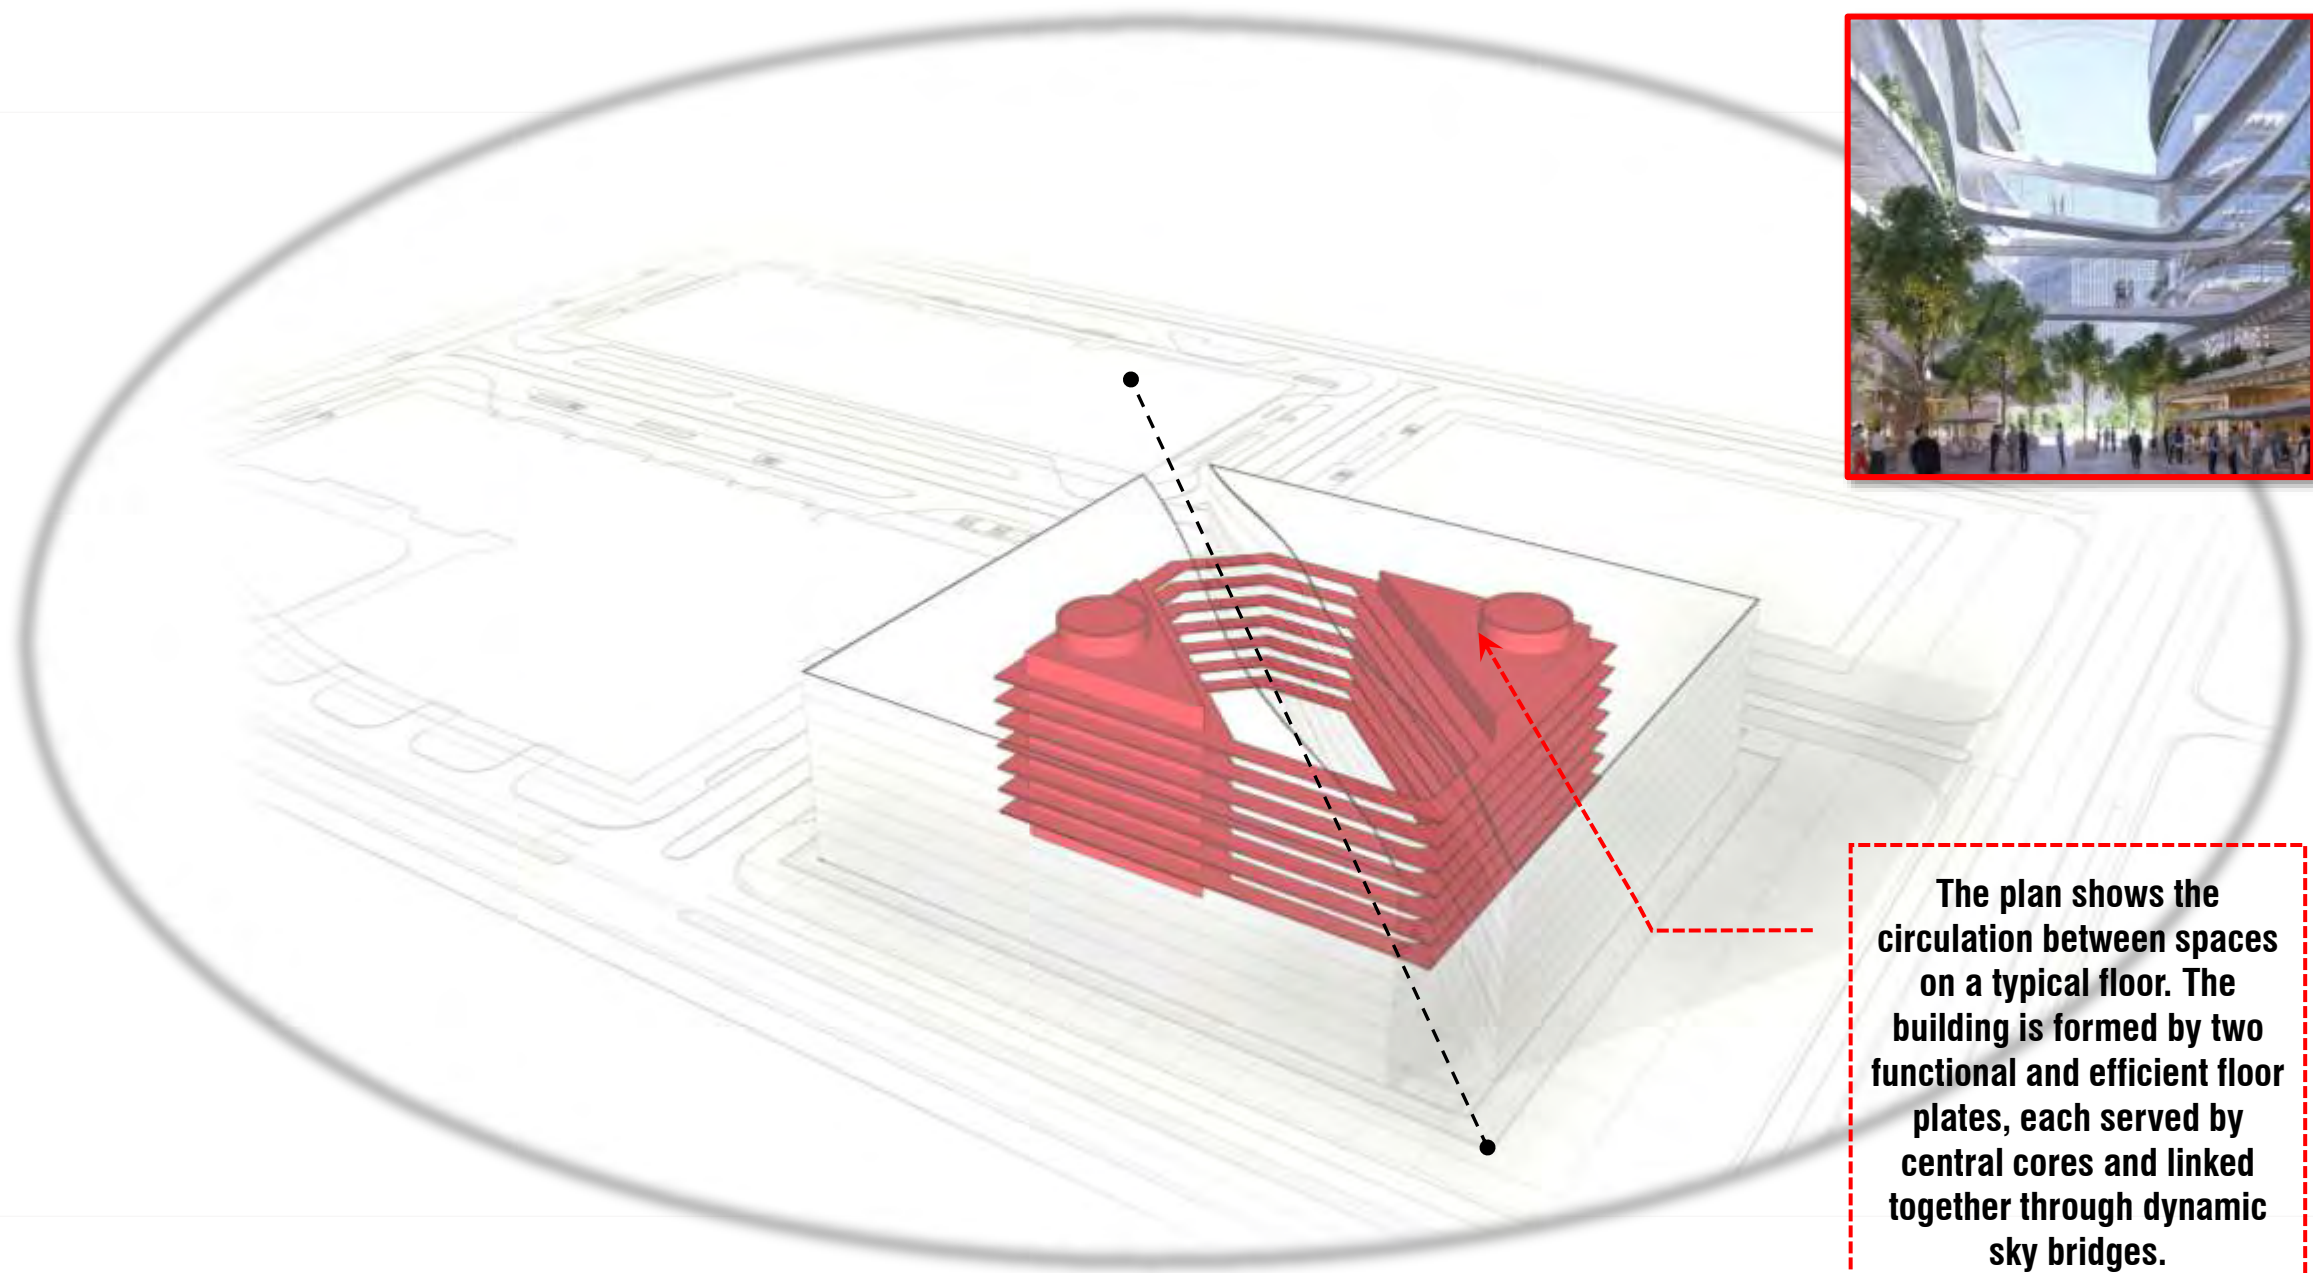

VOLUME DEVELOPMENT

The form of the diagonal rift takes on a layered, fluid and dynamic character evoking the freedom of flight.

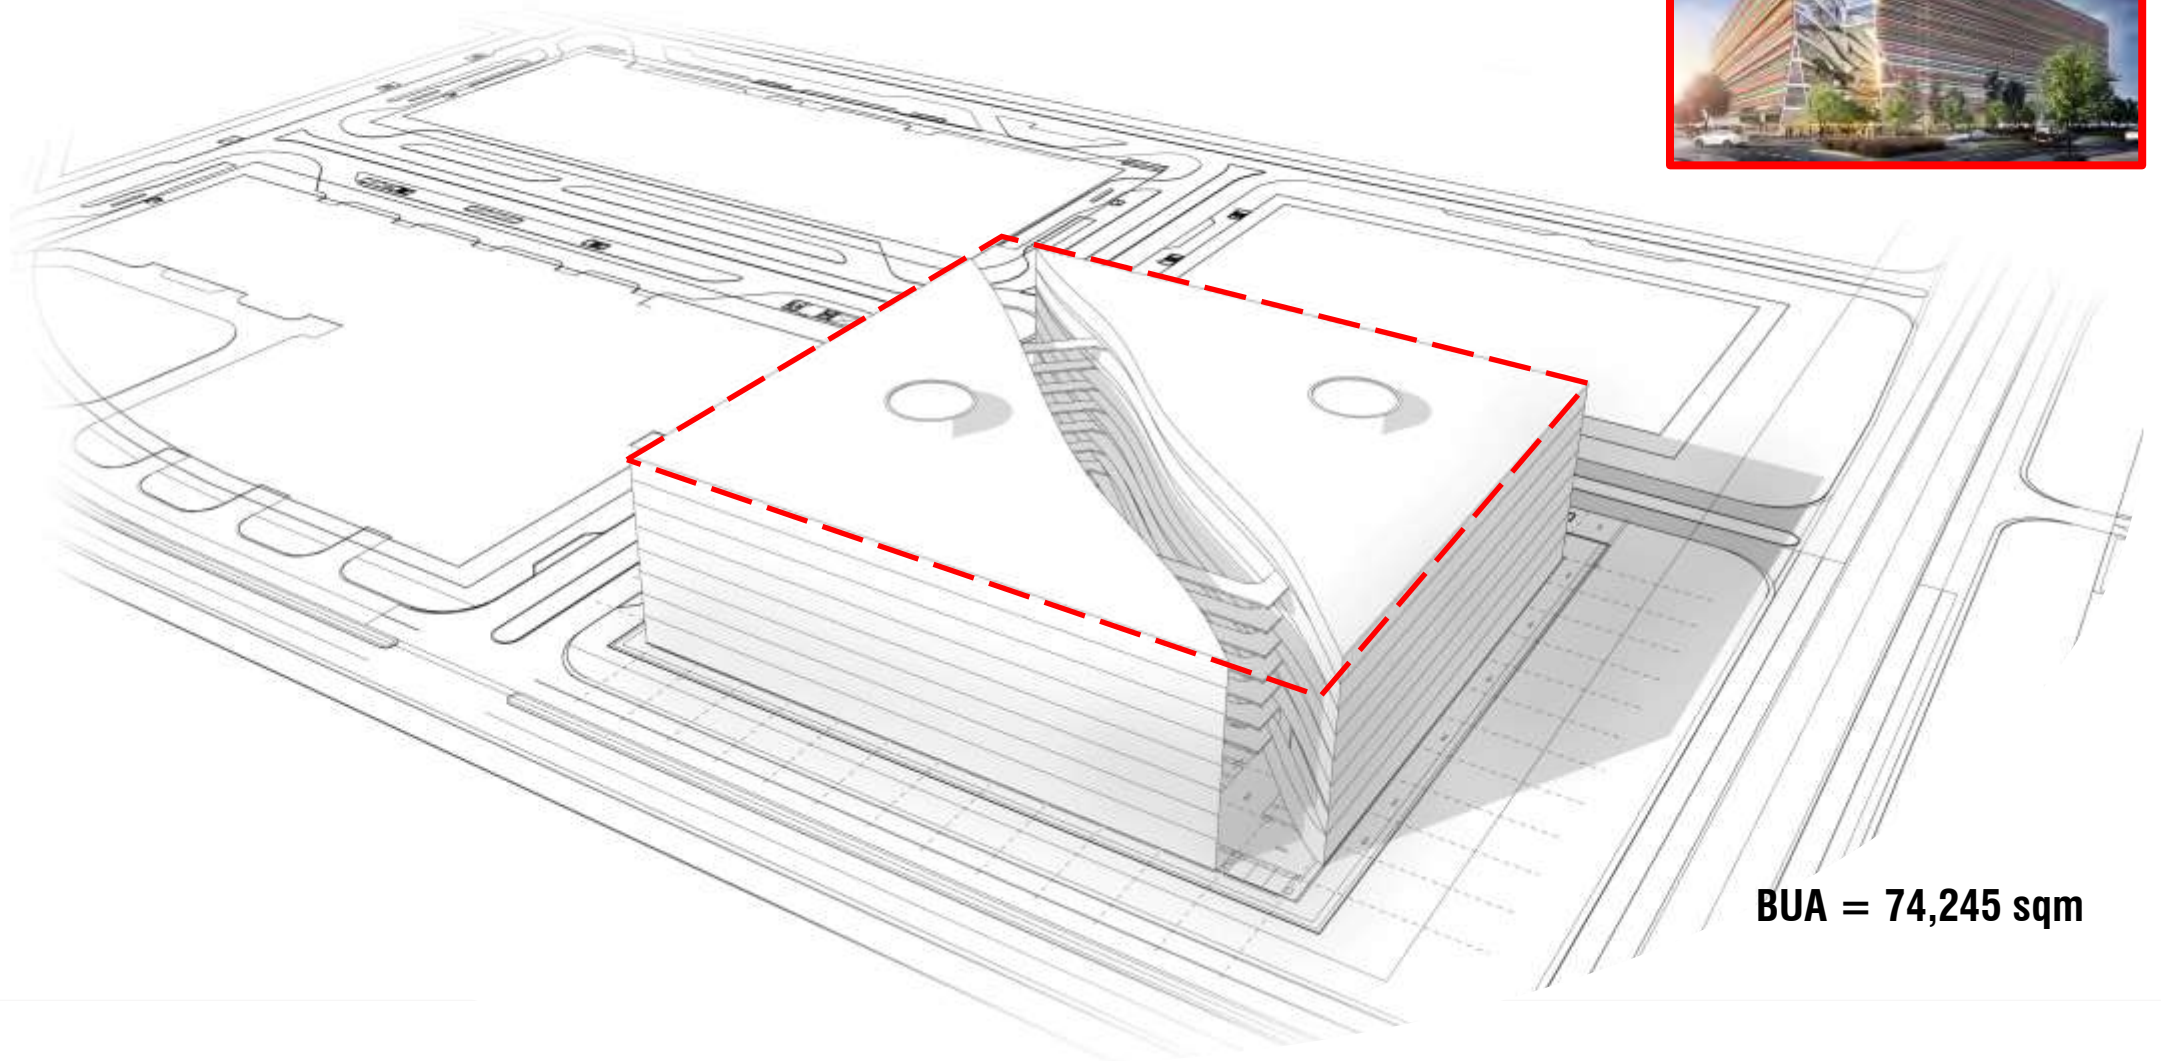

BUA = 74,245 sqm

VOLUME DEVELOPMENT

The plan shows the circulation between spaces on a typical floor. The building is formed by two functional and efficient floor plates, each served by central cores and linked together through dynamic sky bridges.

VOLUME DEVELOPMENT

BUA = 74,245 sqm

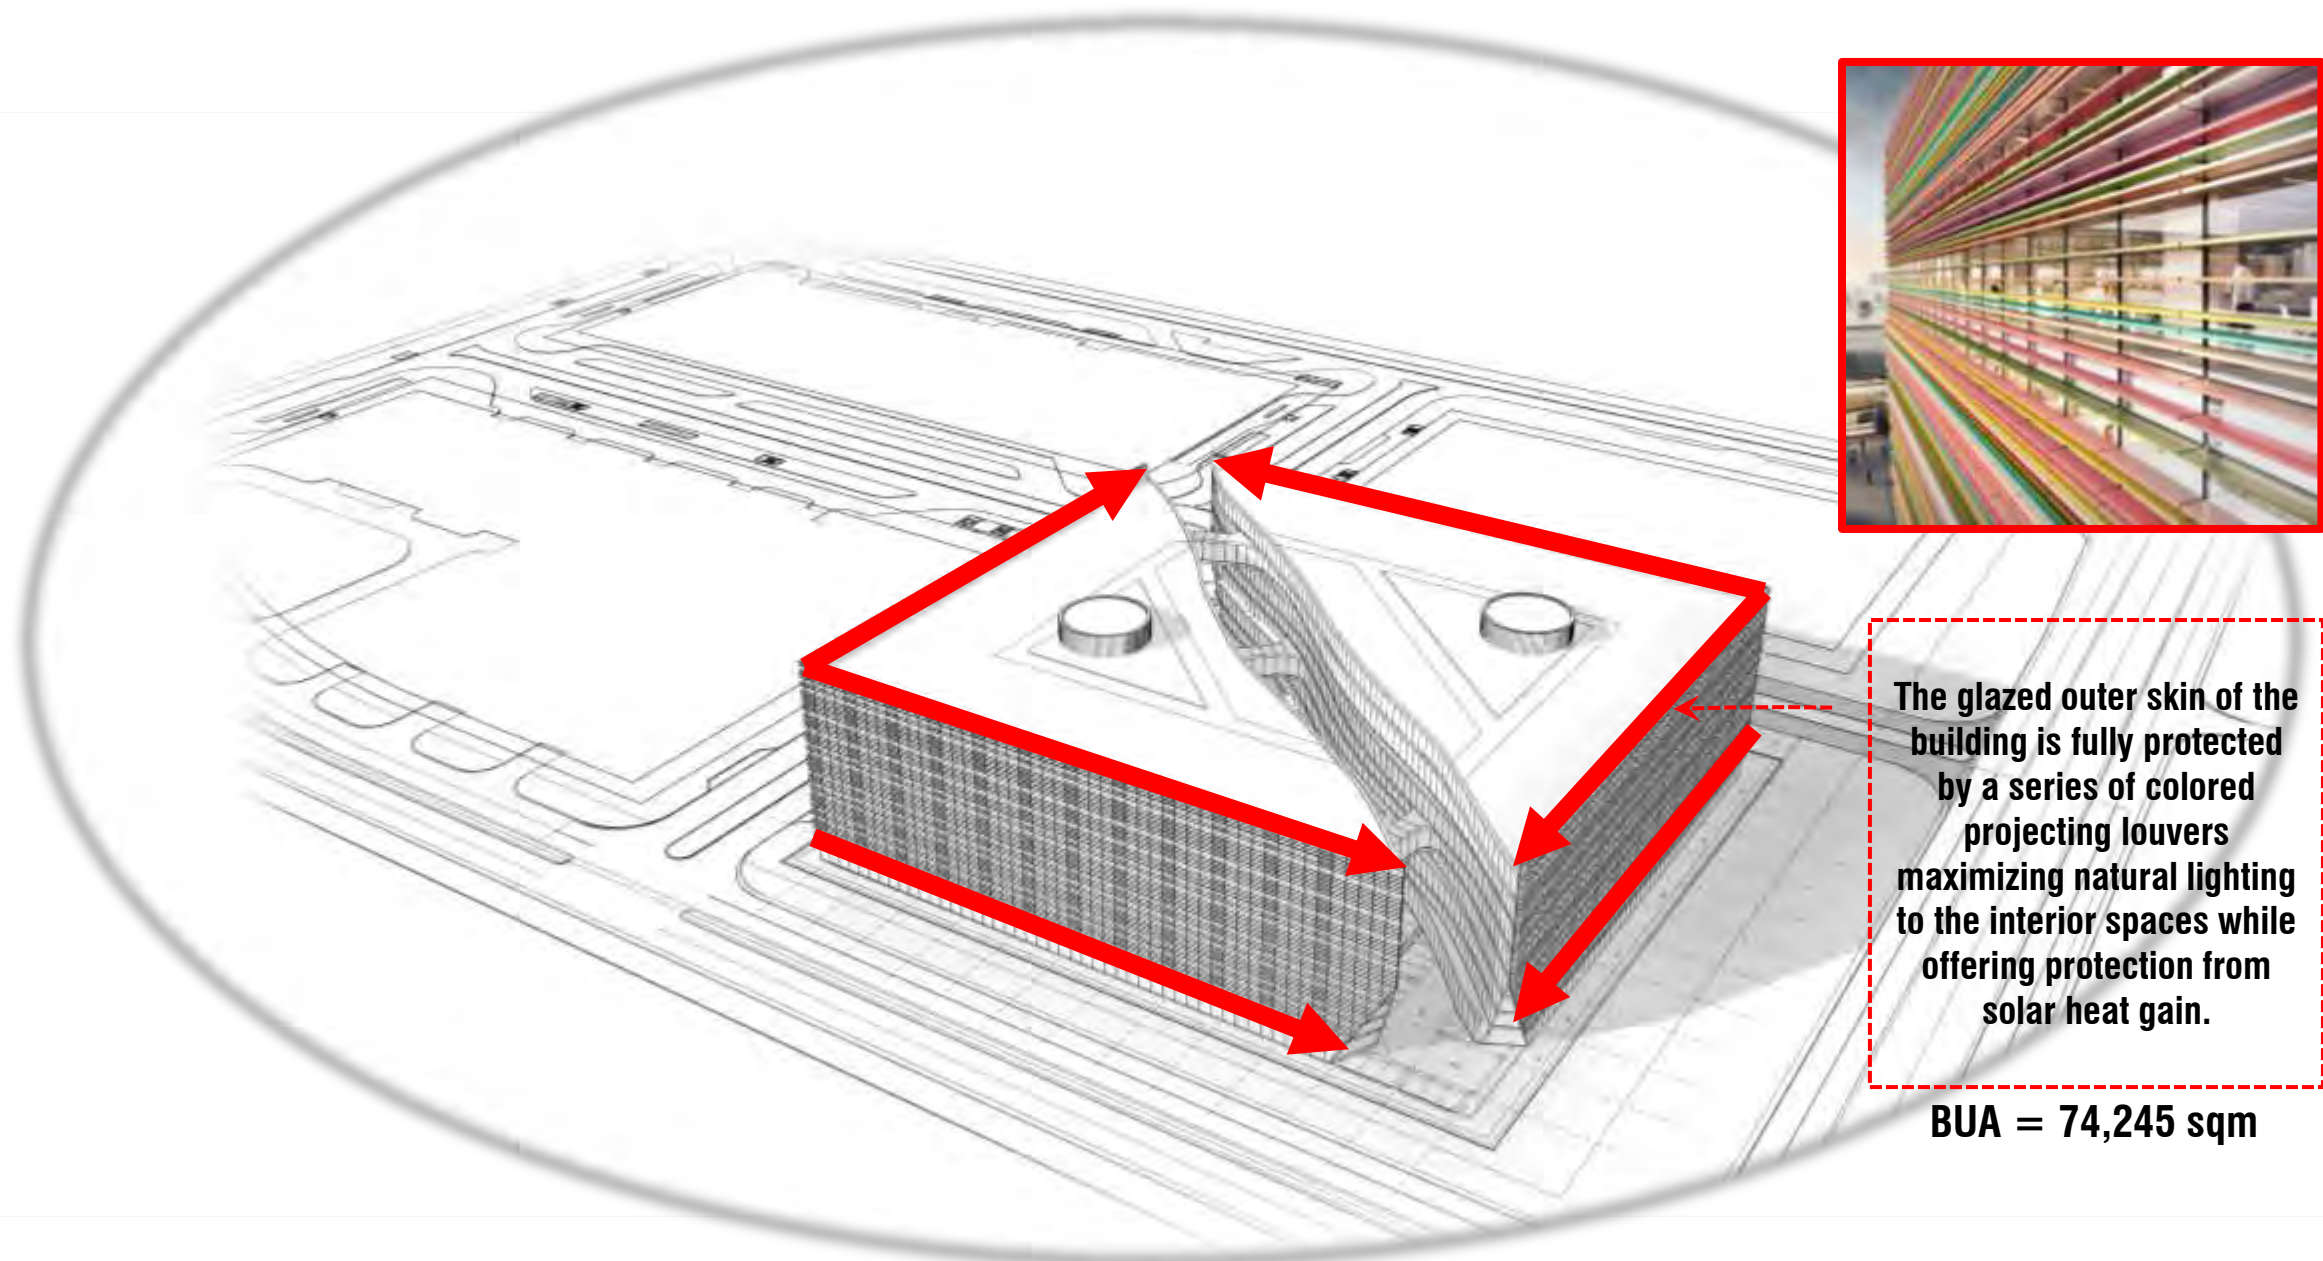

VOLUME DEVELOPMENT

Dramatic chamfers at the building corners accentuate the significance of the diagonal rift, as if to channel the users into a fluid ethereal experience.

BUA = 74,245 sqm

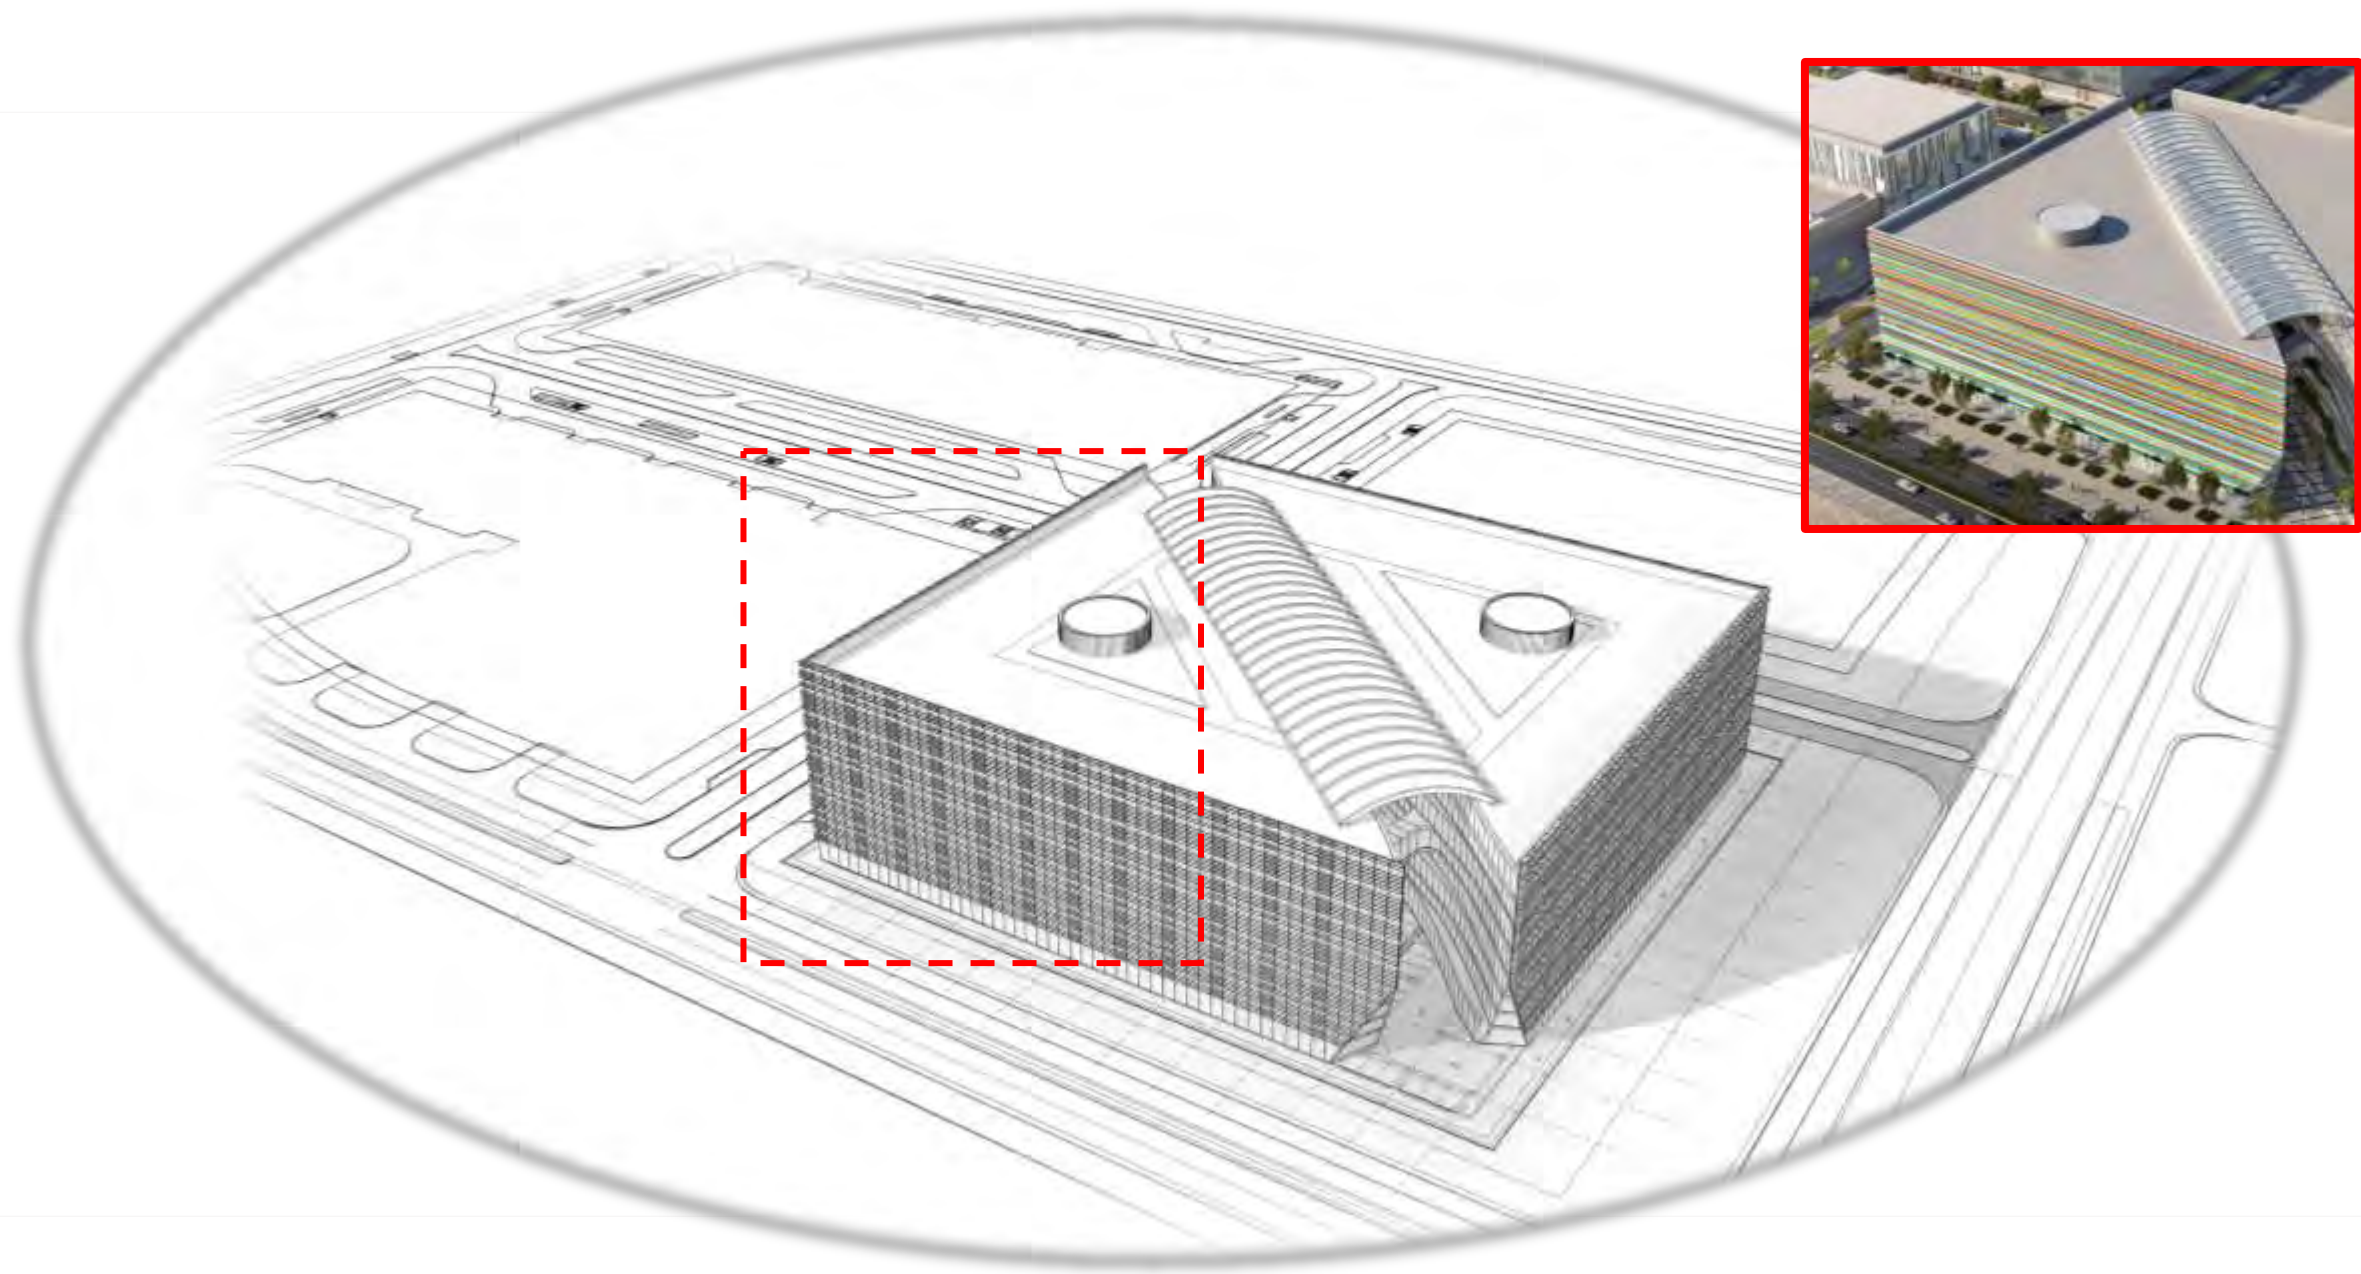

VOLUME DEVELOPMENT

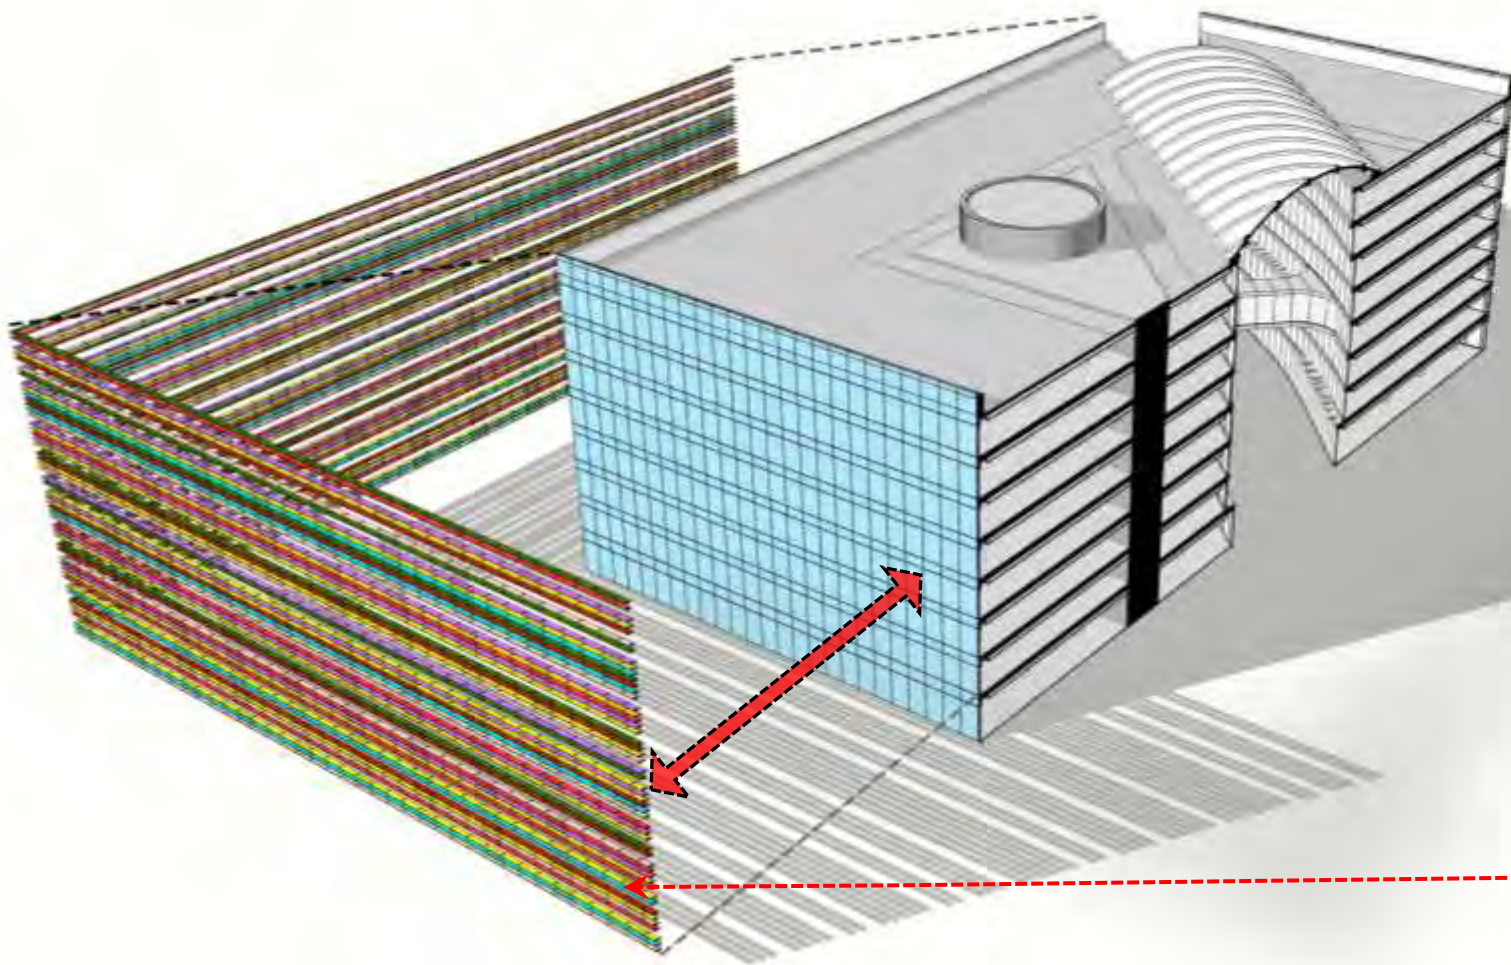

The glazed outer skin of the building is fully protected by a series of colored projecting louvers maximizing natural lighting to the interior spaces while offering protection from solar heat gain.

BUA = 74,245 sqm

VOLUME DEVELOPMENT

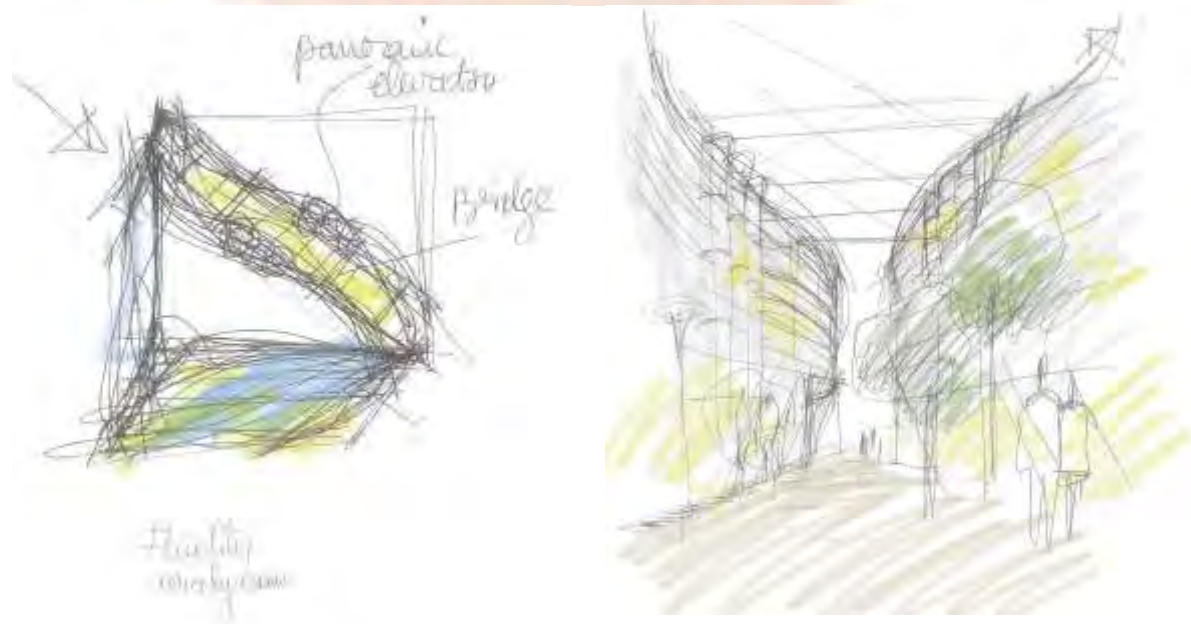

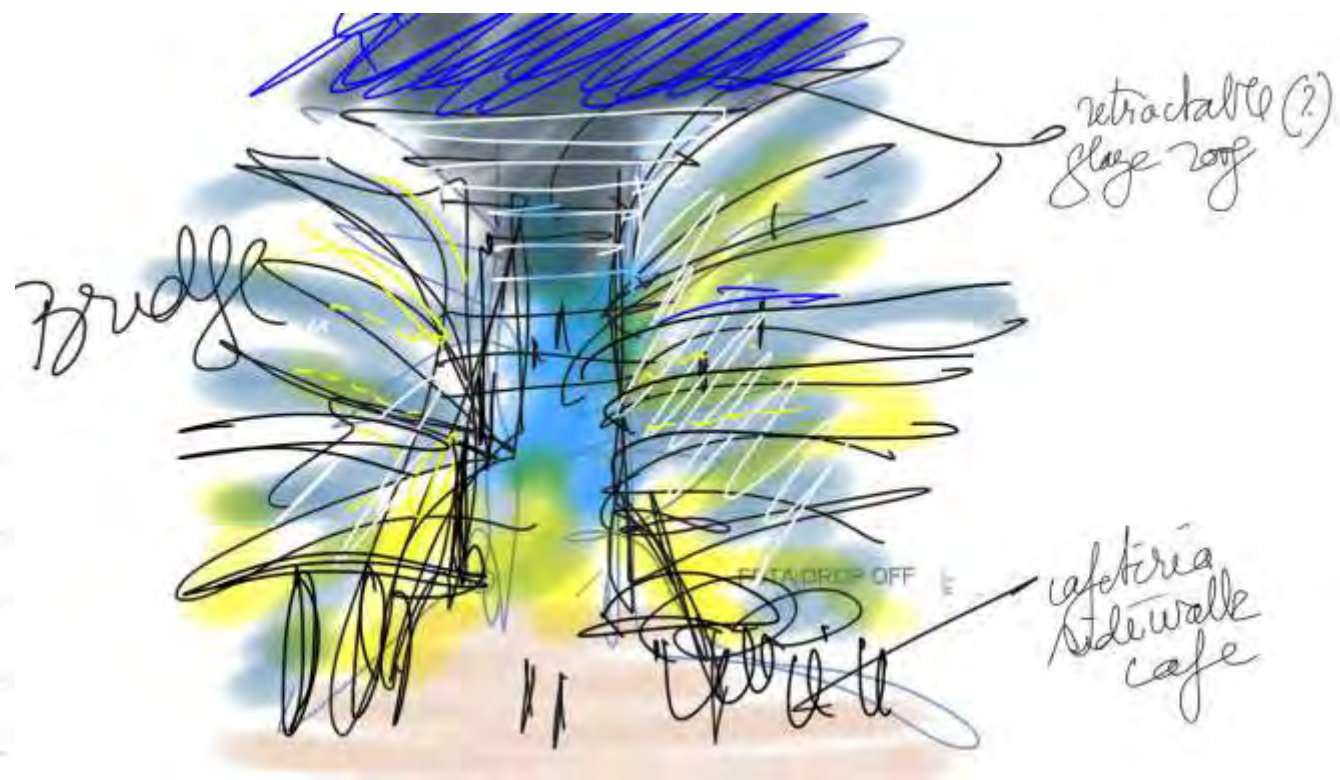

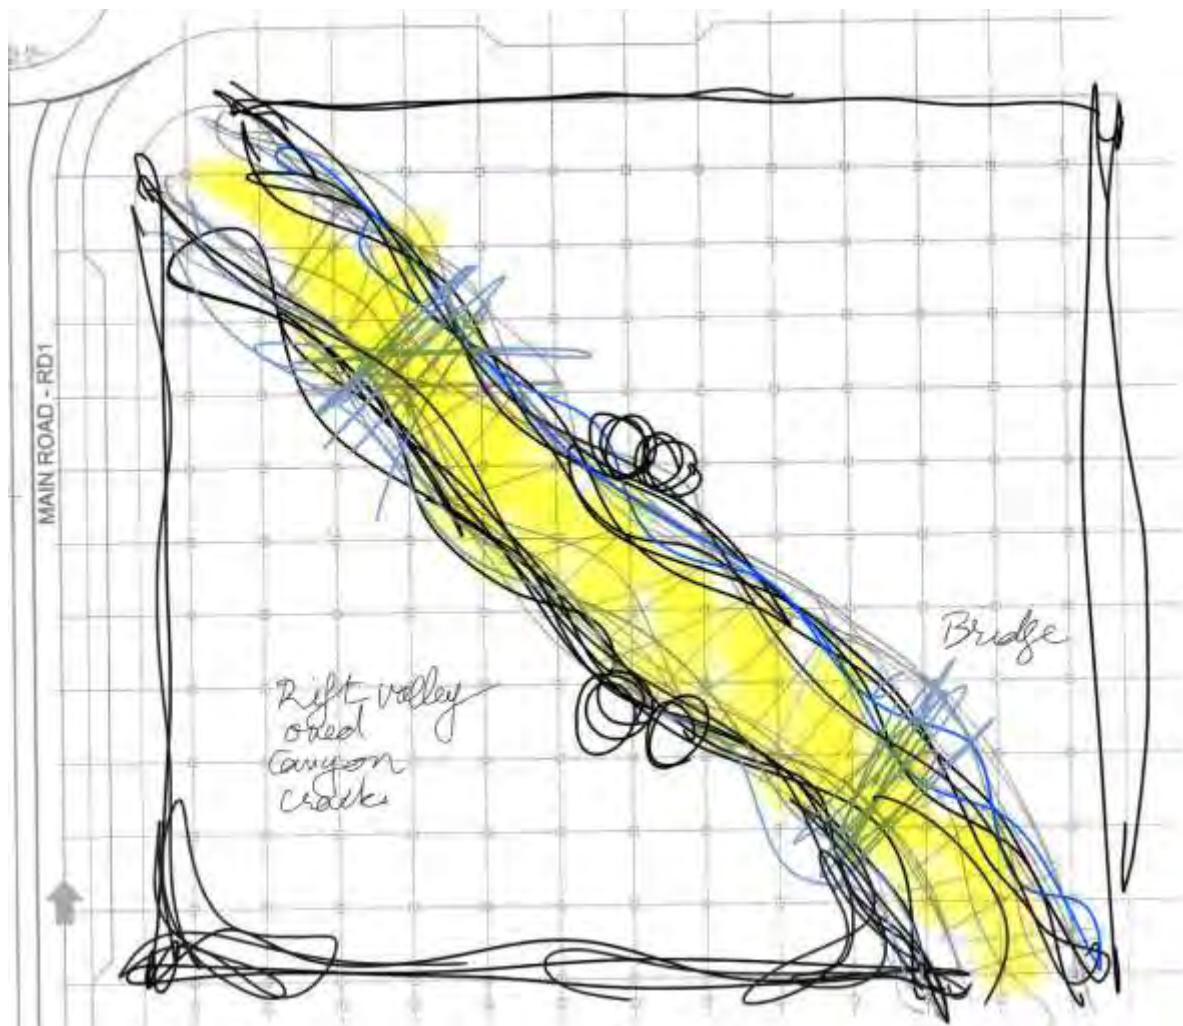

VOLUME DEVELOPMENT

The color and layout of the projecting louvers create a distinct pattern on an impressive scale creating a distinctive and memorable building from both the land and the air.

Aligning with the full extents of the site in order to maximize BUA, the building's orthogonal shell contrasts with the fluidity and dynamic nature of the diagonal rift.

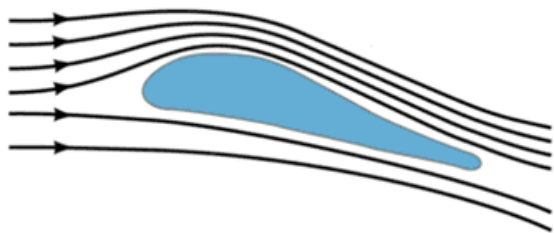

Dramatic chamfers at the building corners accentuate the significance of the diagonal rift, as if to channel the users into a fluid ethereal experience.

The glazed outer skin of the building is fully protected by a series of colored projecting louvers, maximizing natural light to the interior spaces while offering protection from solar heat gain.

A lightweight roof enclosure
glides above the void, providing
discreet shelter from the
elements and moderating the
microclimate of the space

The distinctively sinuous curves
of the office floorplates and the
seamless fluidity of the sky
bridges express aerodynamic
geometries designed to
generate lift

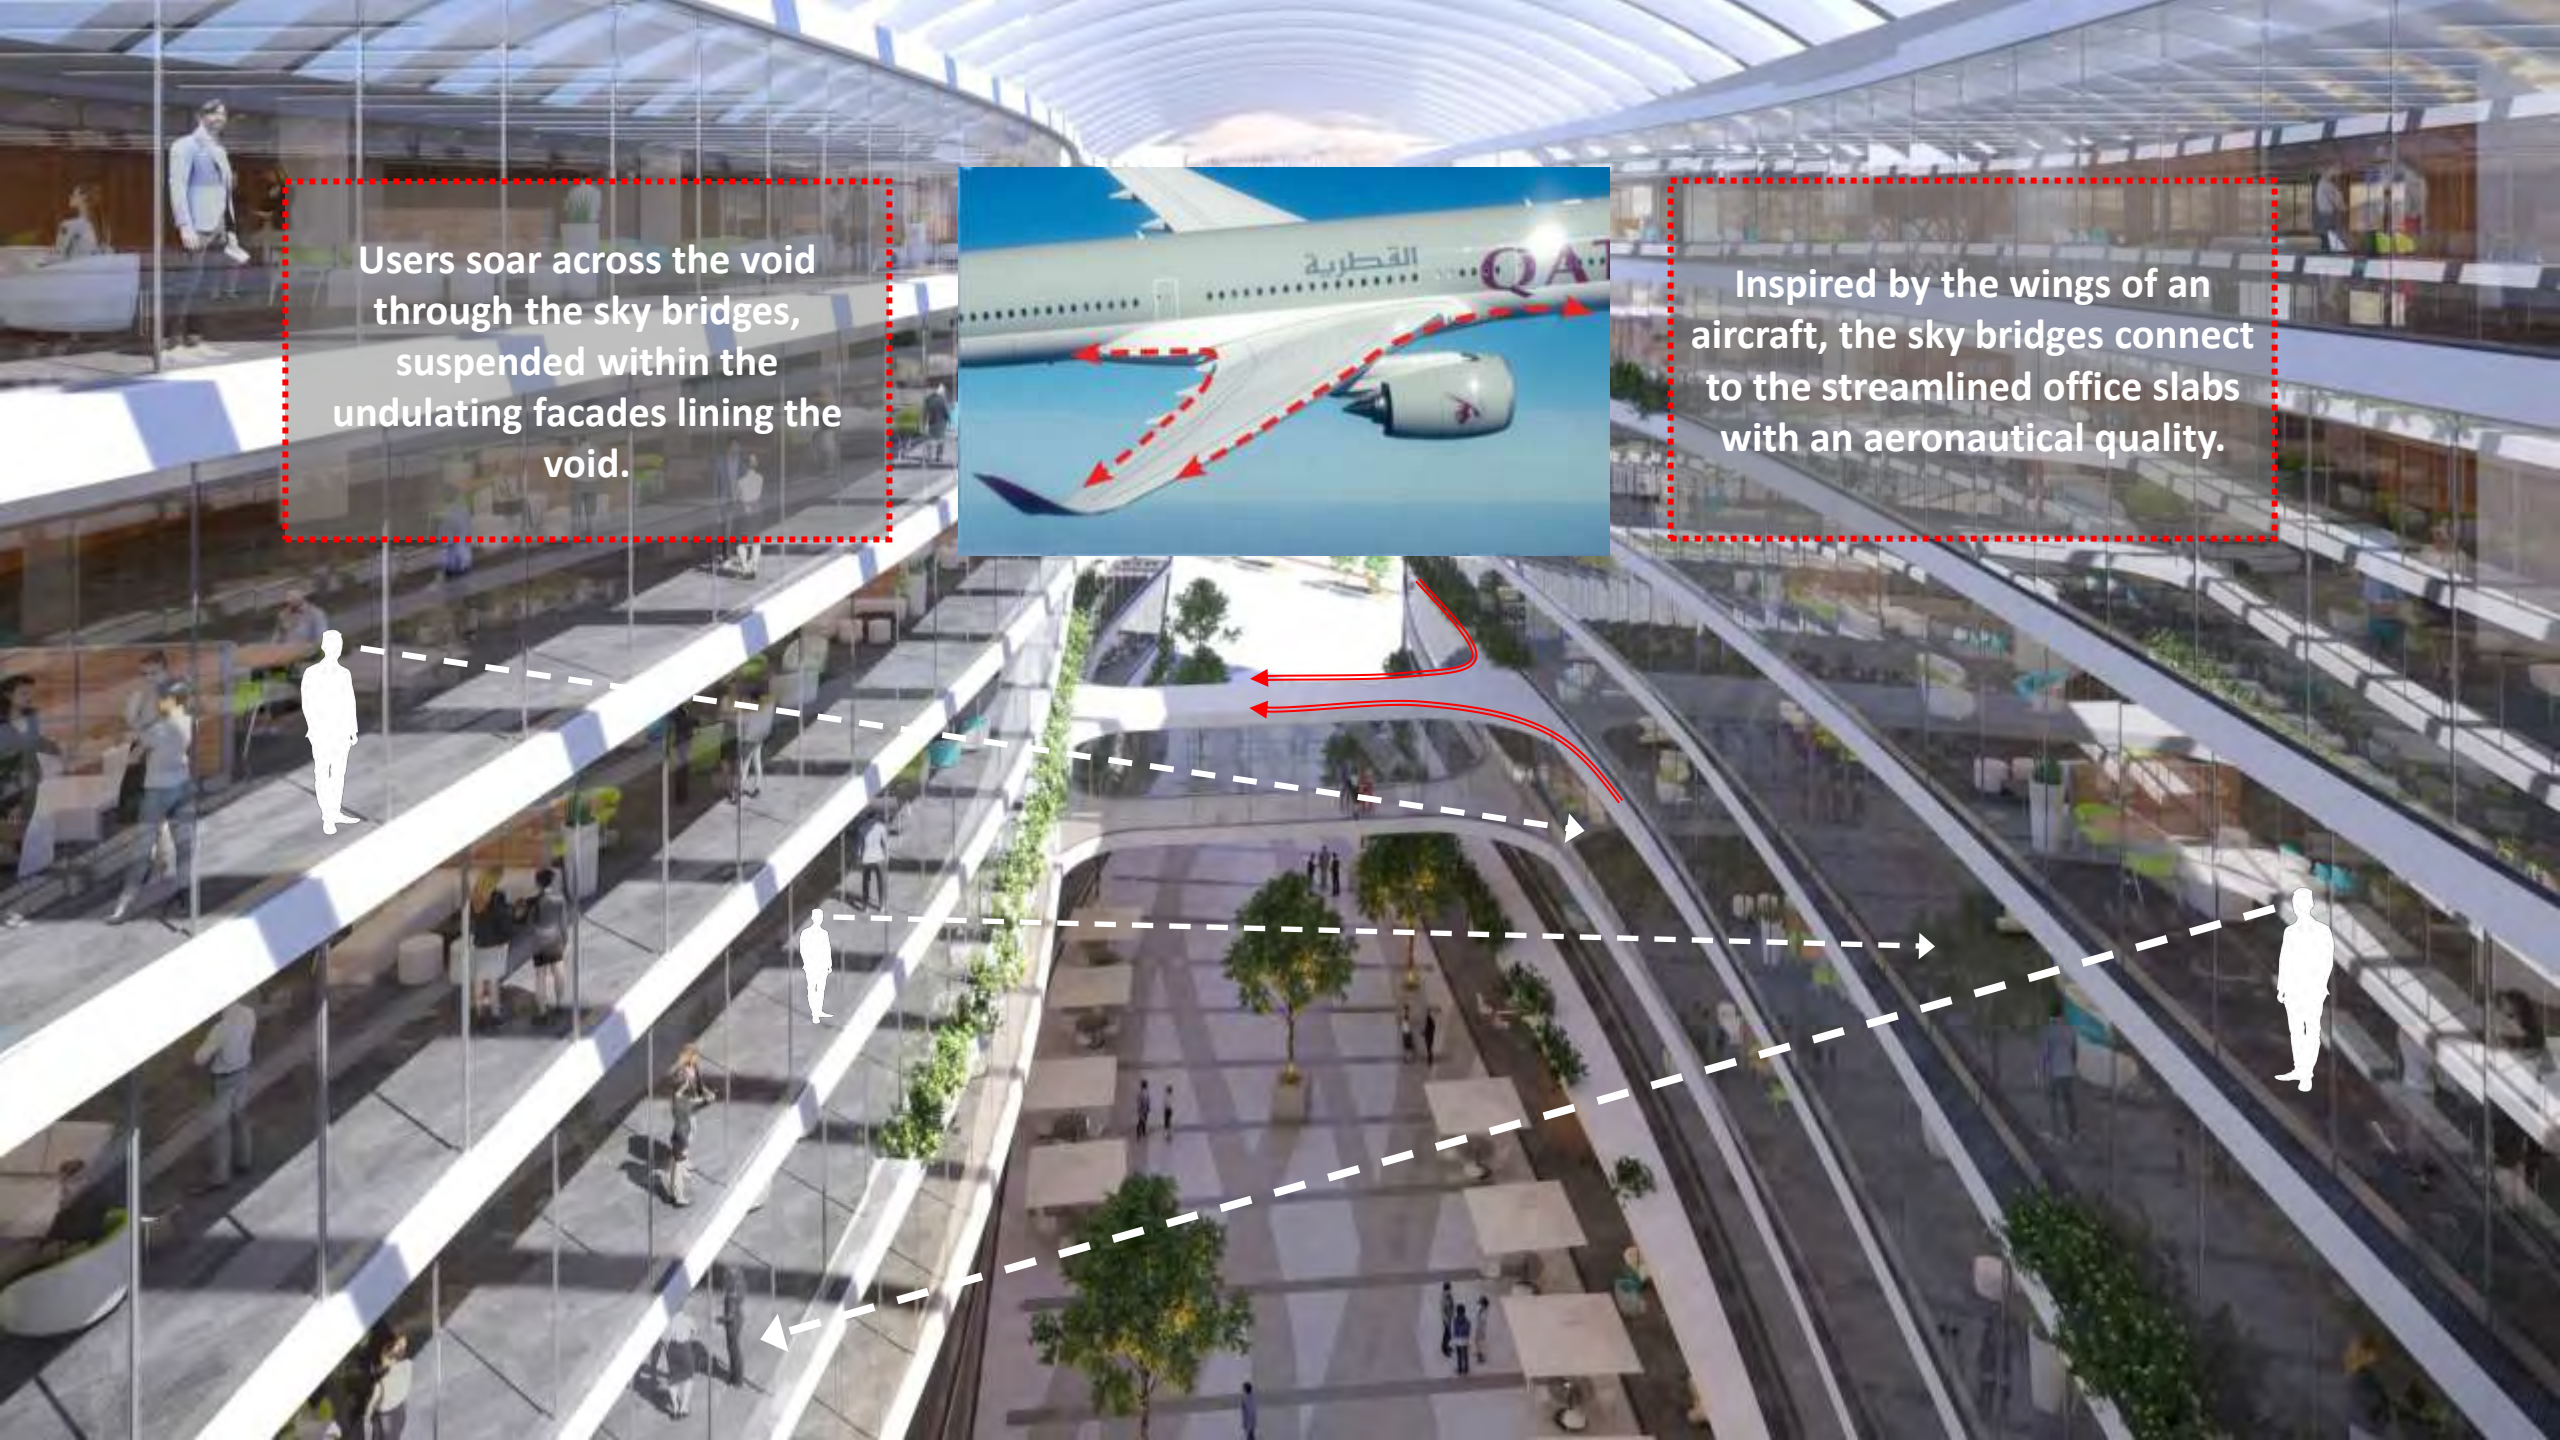

Below the floating
floorplates of the office
levels, the base of the
diagonal rift, with it's café
seating and landscaped
break-out spaces, acts as
an outdoor extension to
the building, offering
various opportunities for
social interaction of the
employees

Users soar across the void through the sky bridges, suspended within the undulating facades lining the void.

Inspired by the wings of an aircraft, the sky bridges connect to the streamlined office slabs with an aeronautical quality.

A series of seemingly elevated employee break-out areas and meeting rooms line the edges of the void, creating a highly visual and animated backdrop to the work environment

Crossing sky bridges and overlooking office spaces animate the void through a layered expression of the dynamism and interaction of the user's activity

The fully glazed exterior façade is delicately enhanced by the subtle variations in colored projecting louvers, protecting from direct solar heat gain and glare

Through the use of color, the projecting louvers lining the exterior shell of the building afford protection from solar heat gain while providing an opportunity to express the distinct building character, evoking the vibrant hues of a dramatic sky.

The glazed outer skin of the building is fully protected by a series of colored projecting louvers, maximizing natural light to the interior spaces and views to the horizon while offering protection from solar heat gain

ALL OPTIONS

THE CLOUD

OPTION 1

BUA (above ground): 56,760 m²
Total BUA (including basement): 97,470 m²

THE DIAGONAL

OPTION 2

BUA (above ground): 75,245 m²
Total BUA (including basement): 114,955 m²

THE FALCON

OPTION 3

BUA (above ground): 55,482 m²
Total BUA (including basement): 96,192 m²

THE CIRCLE

OPTION 4

BUA (above ground): 53,896 m²
Total BUA (including basement): 94,606 m²
