

An aerial architectural rendering of the Qatar Airways Headquarters Complex. The main building is a large, rectangular structure with a complex, perforated facade that allows natural light and air to pass through. It is surrounded by landscaped grounds with trees and walkways. In the background, other modern buildings and a road are visible. The overall scene is presented in a soft, illustrative style.

THE SITE

Doha

Headquarters Complex Site 100,000m²

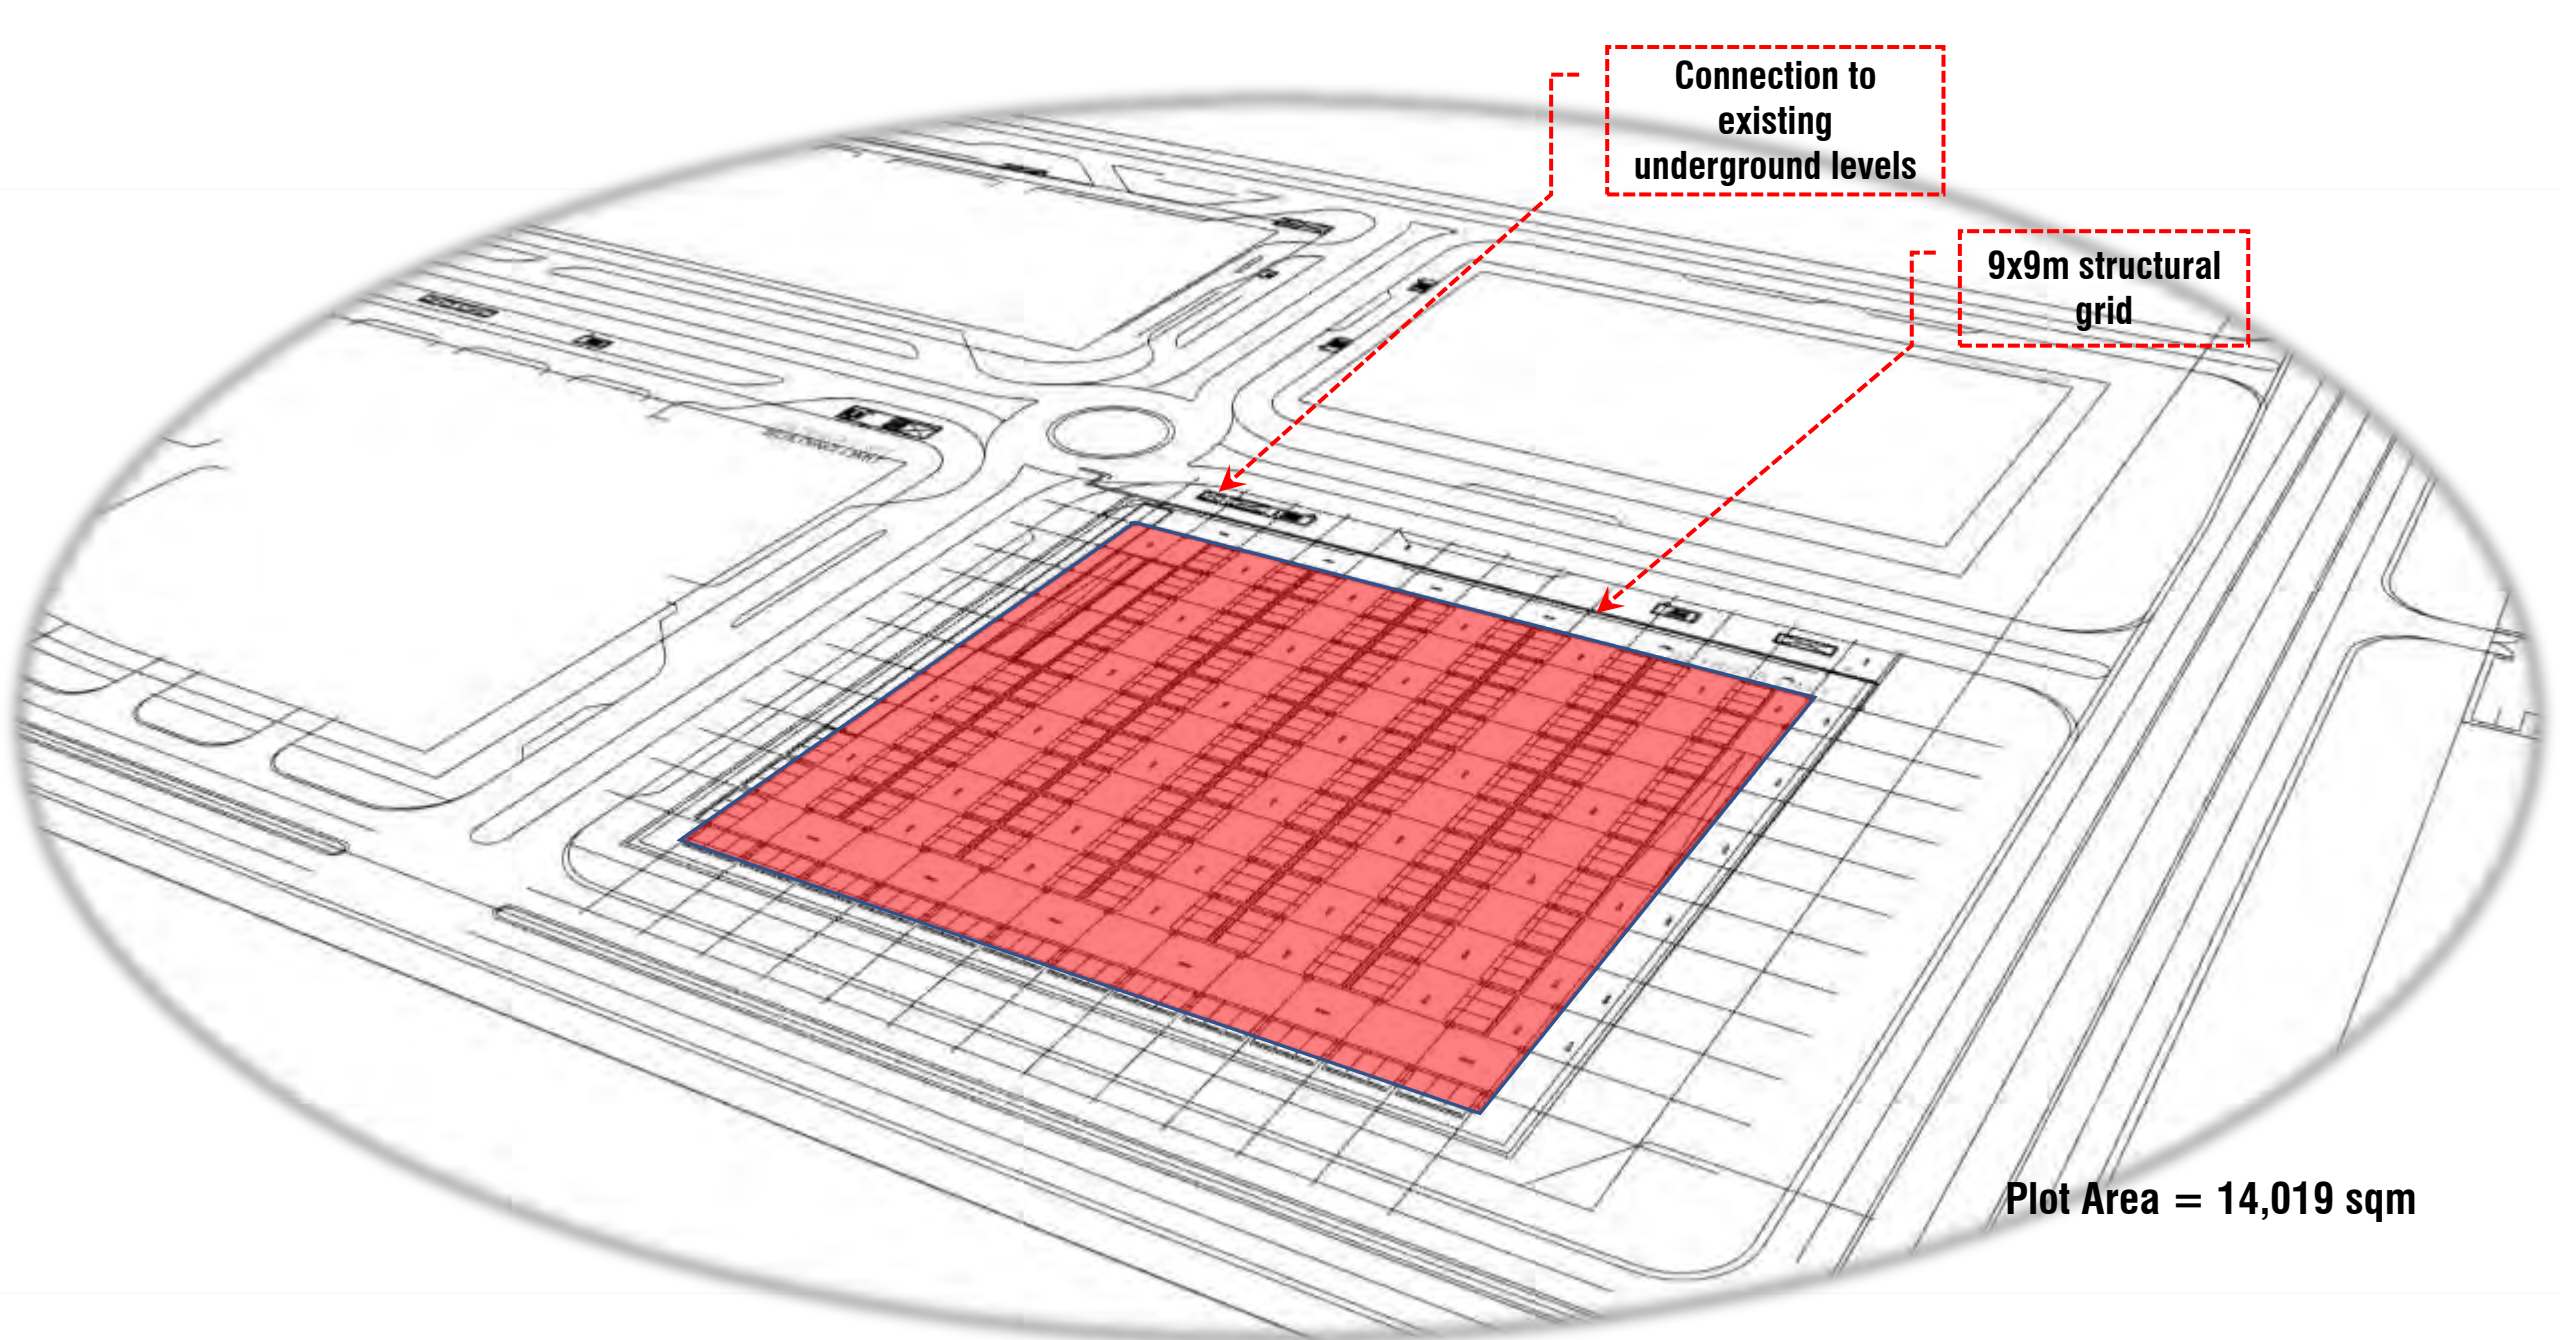

Proposed underground basement (71,500 m²) to include Plot 01 & Plot 04

OPTION 1
THE CLOUD

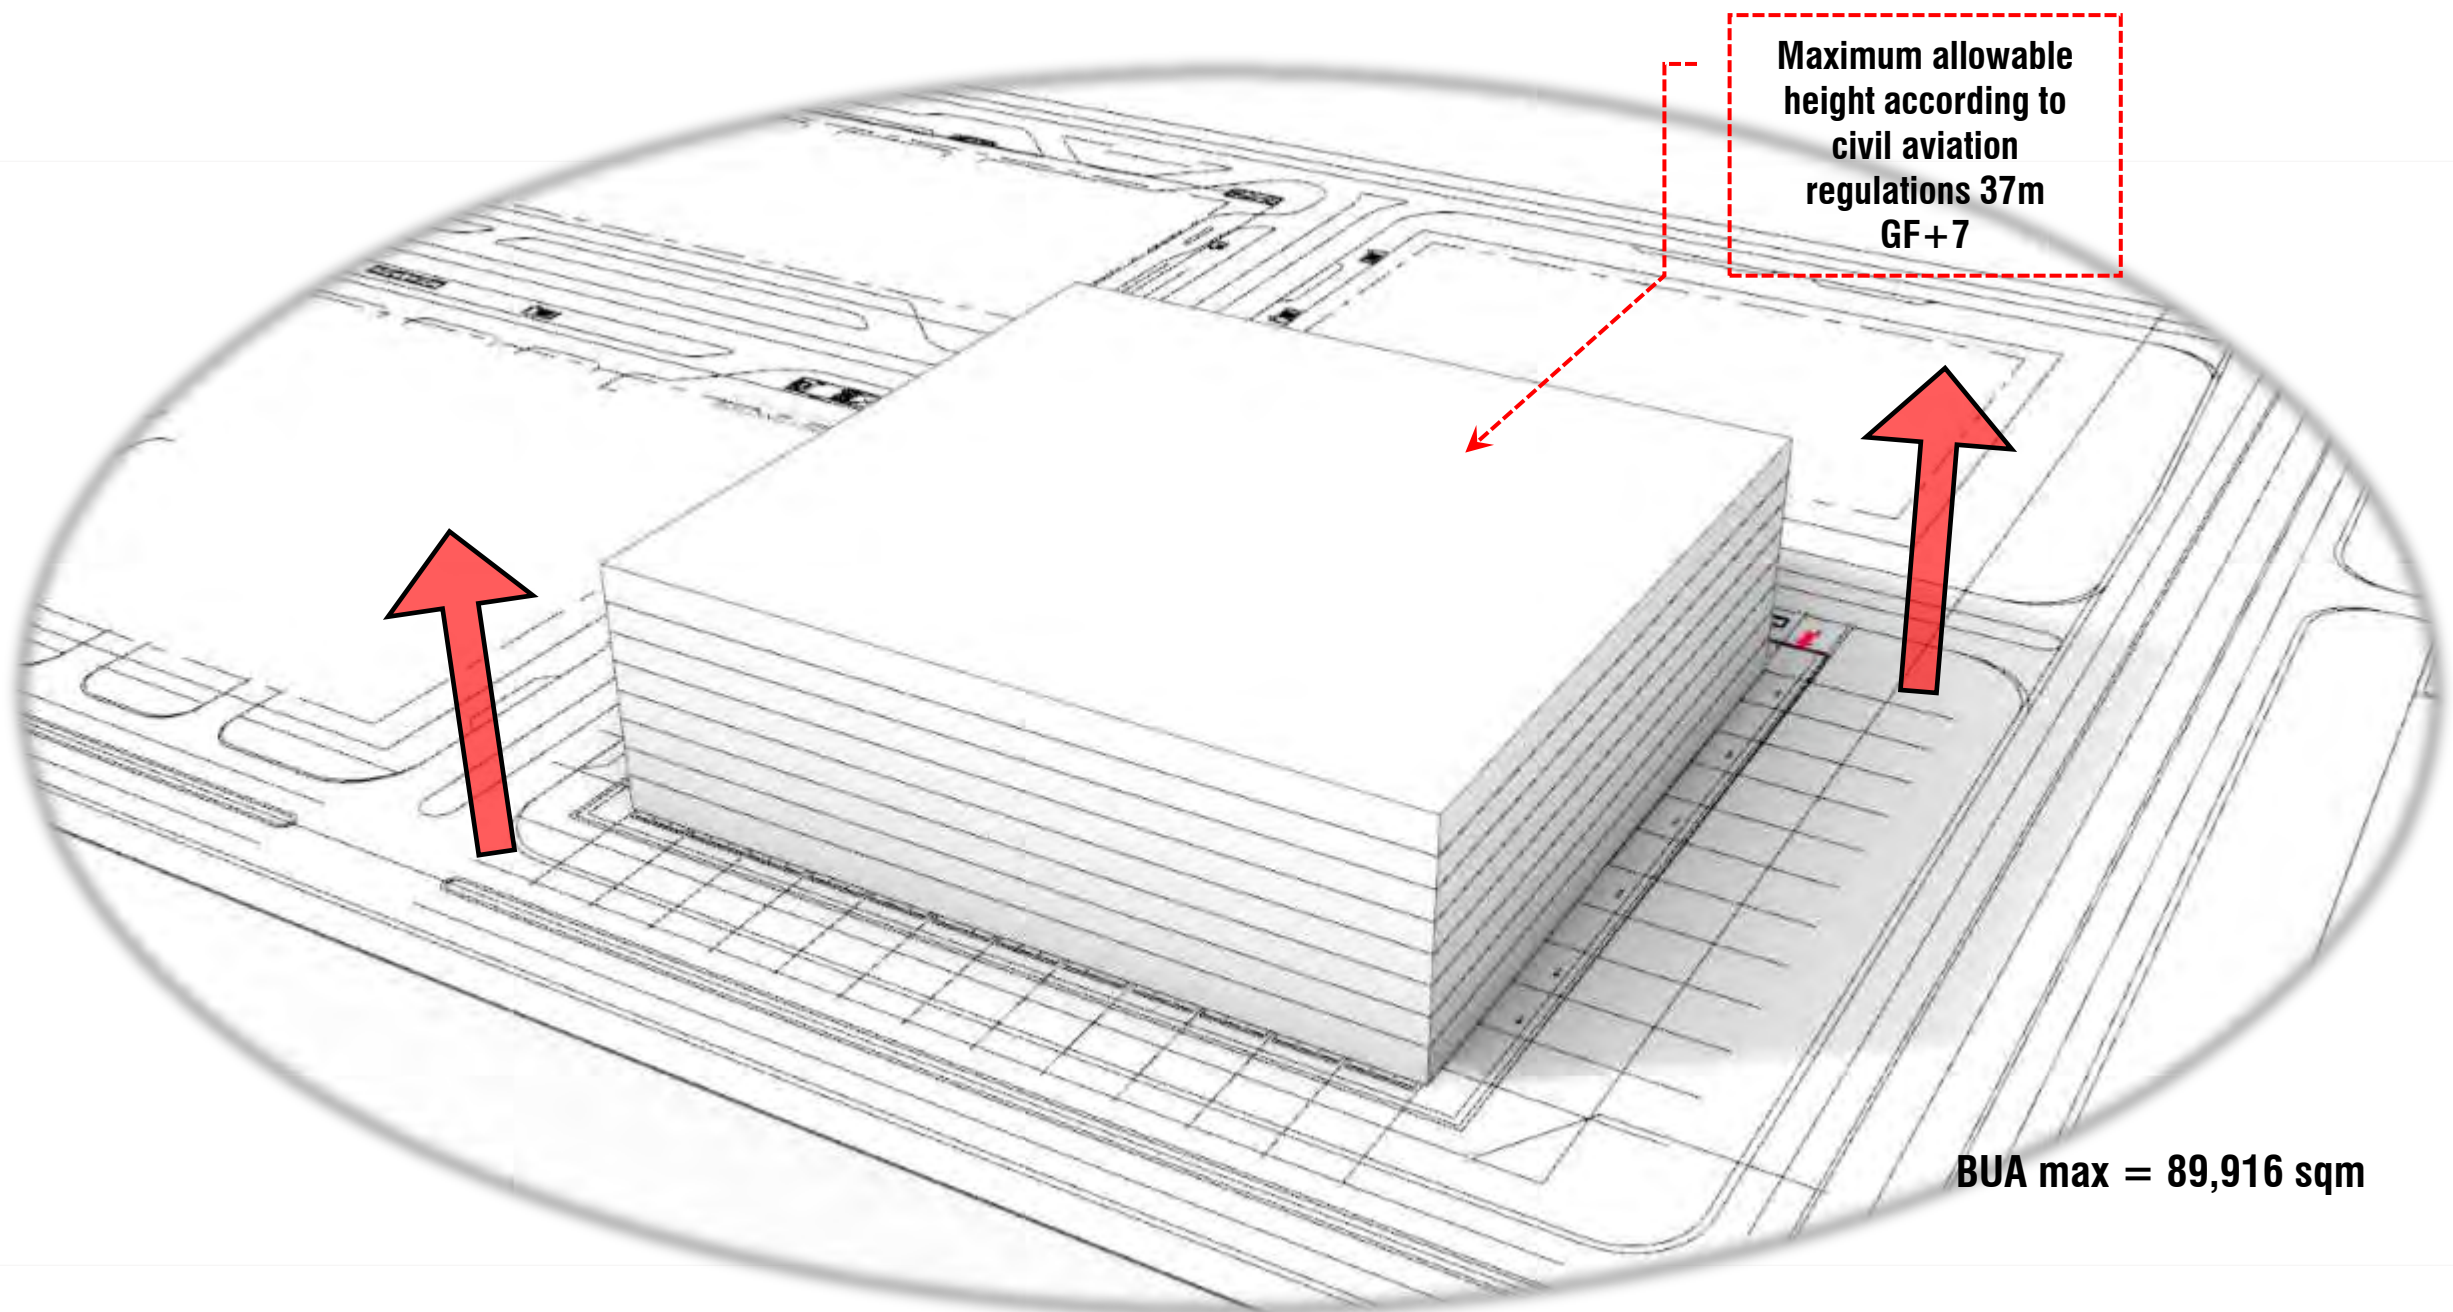

Connection to
existing
underground levels

9x9m structural
grid

Plot Area = 14,019 sqm

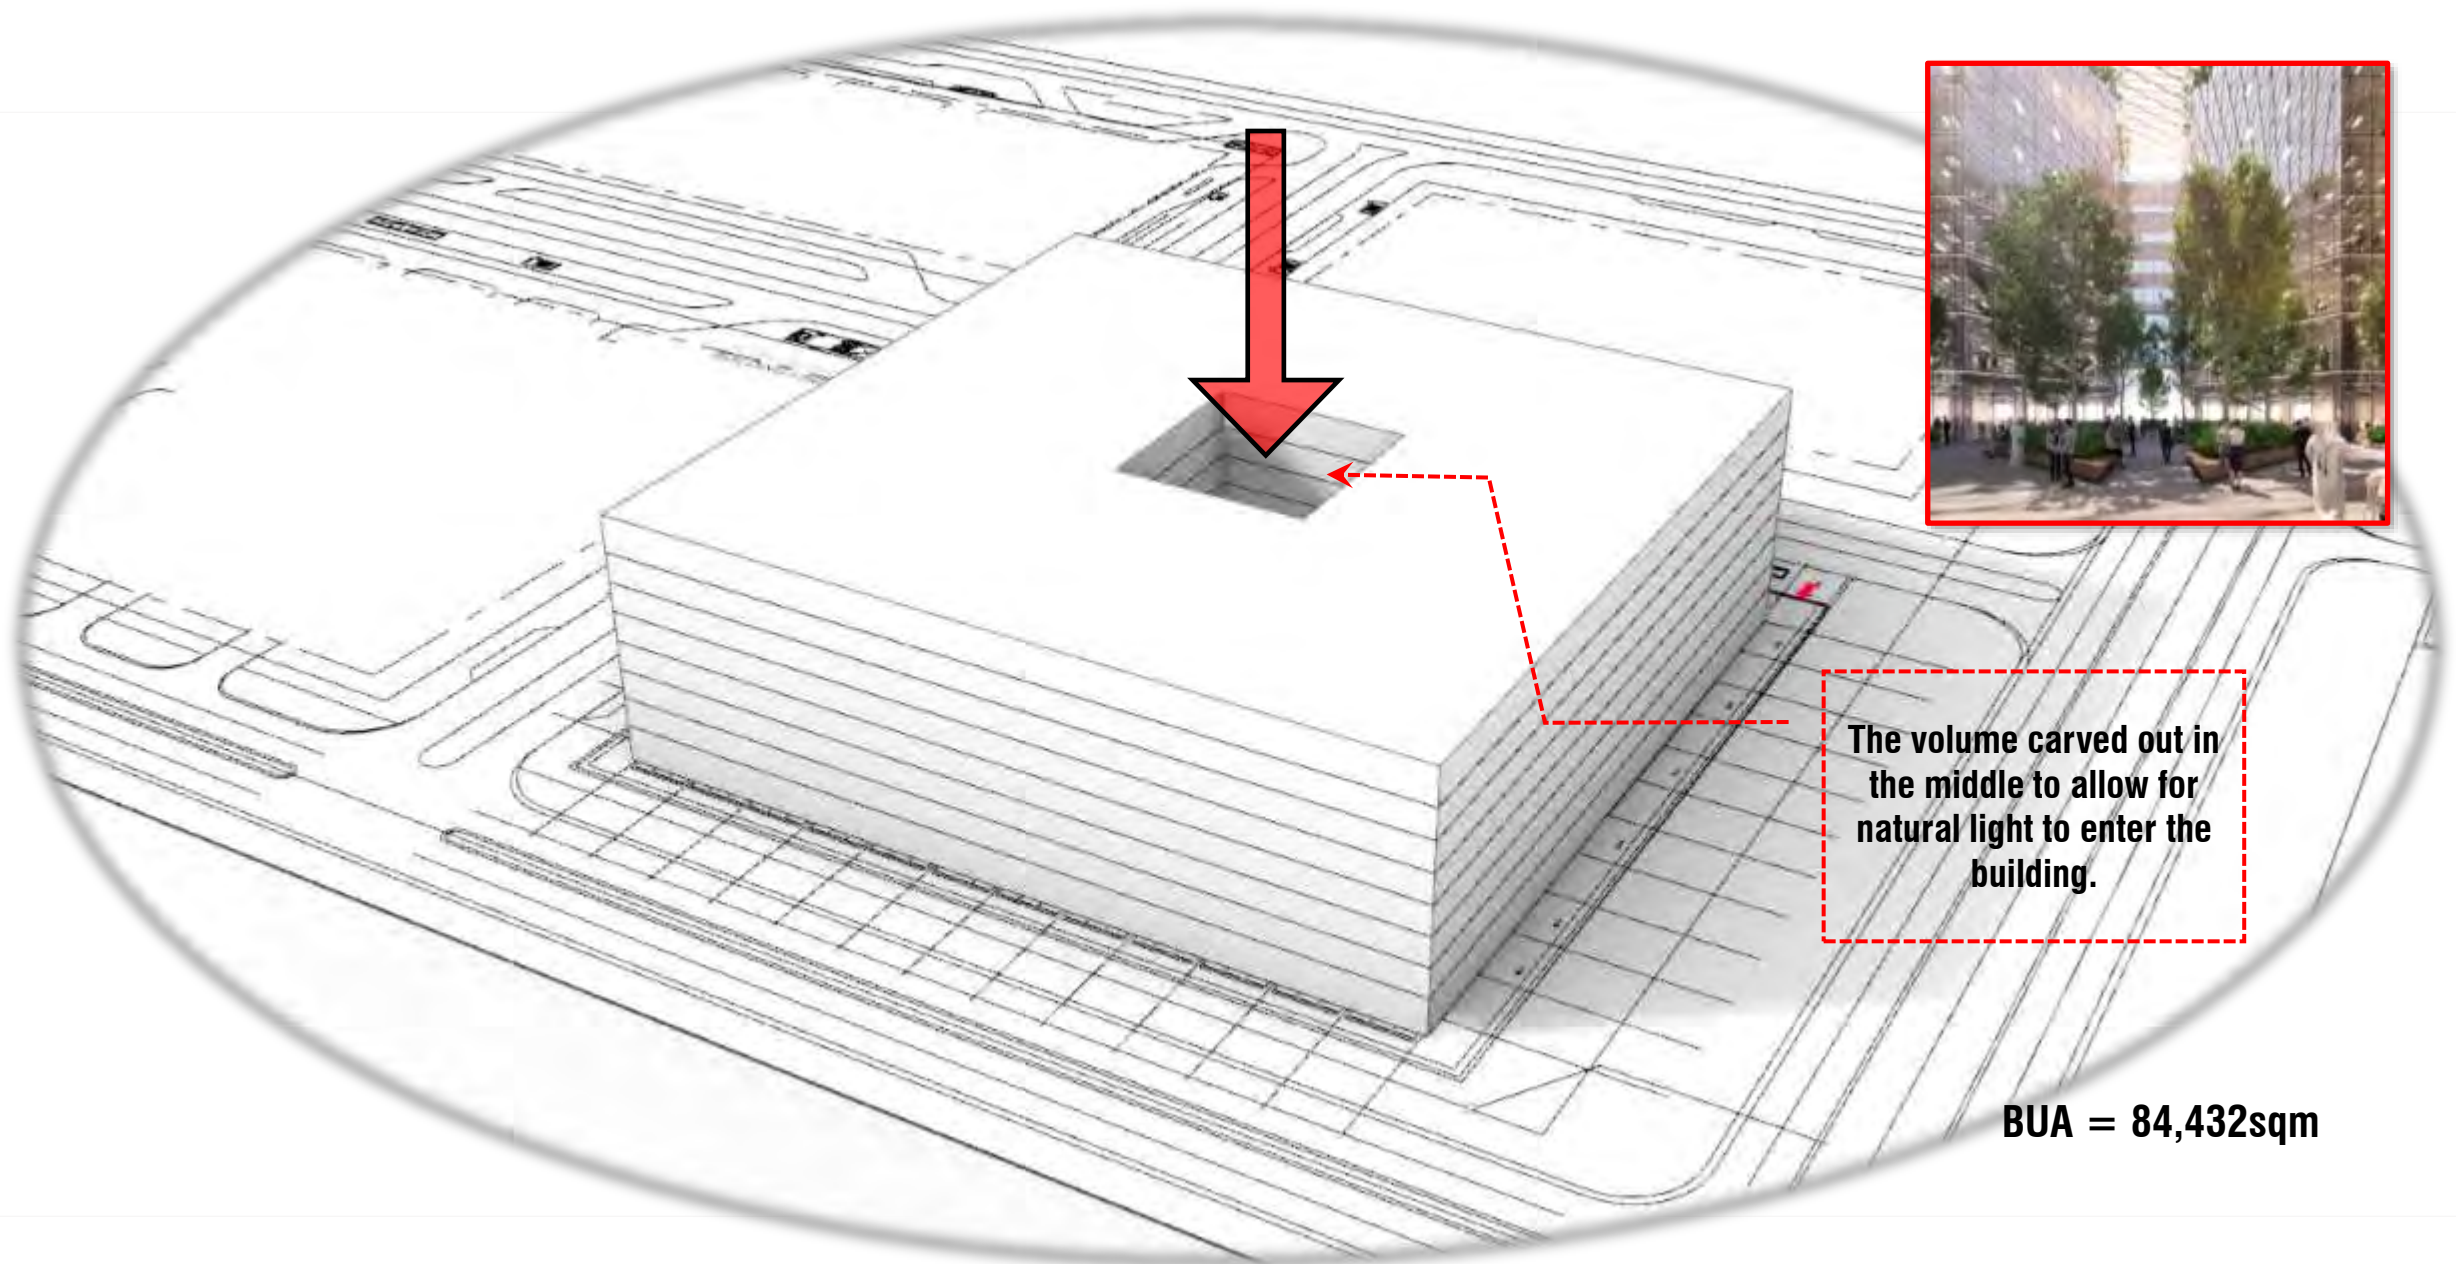

VOLUME DEVELOPMENT

Maximum allowable
height according to
civil aviation
regulations 37m
GF+7

BUA max = 89,916 sqm

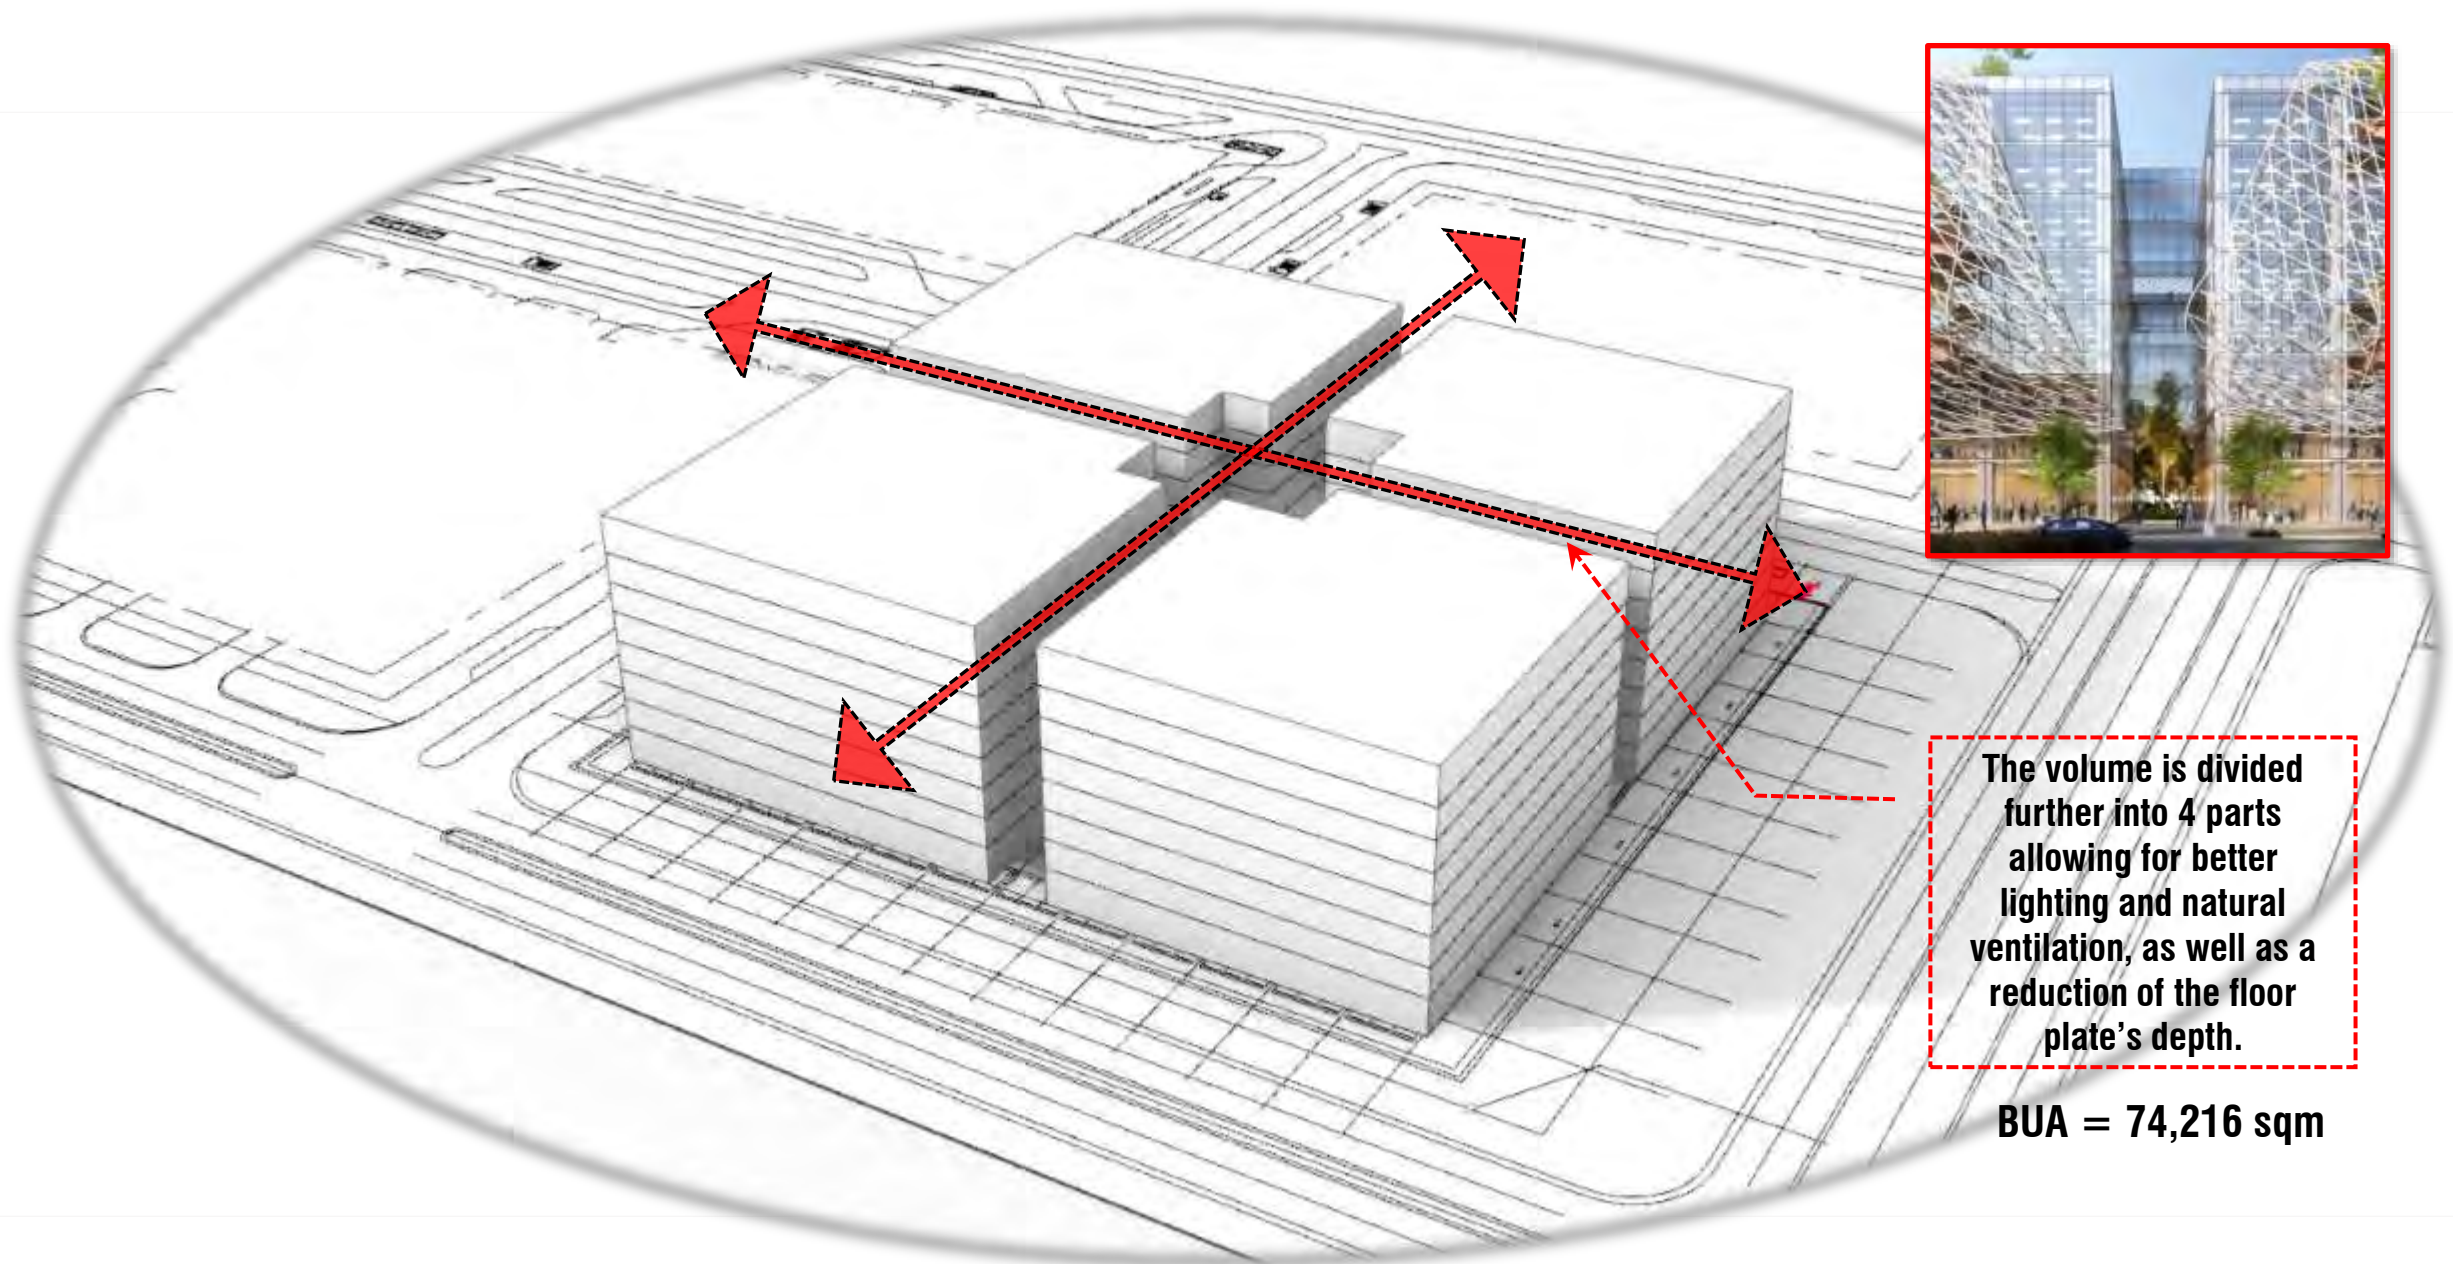

VOLUME DEVELOPMENT

The volume carved out in the middle to allow for natural light to enter the building.

BUA = 84,432sqm

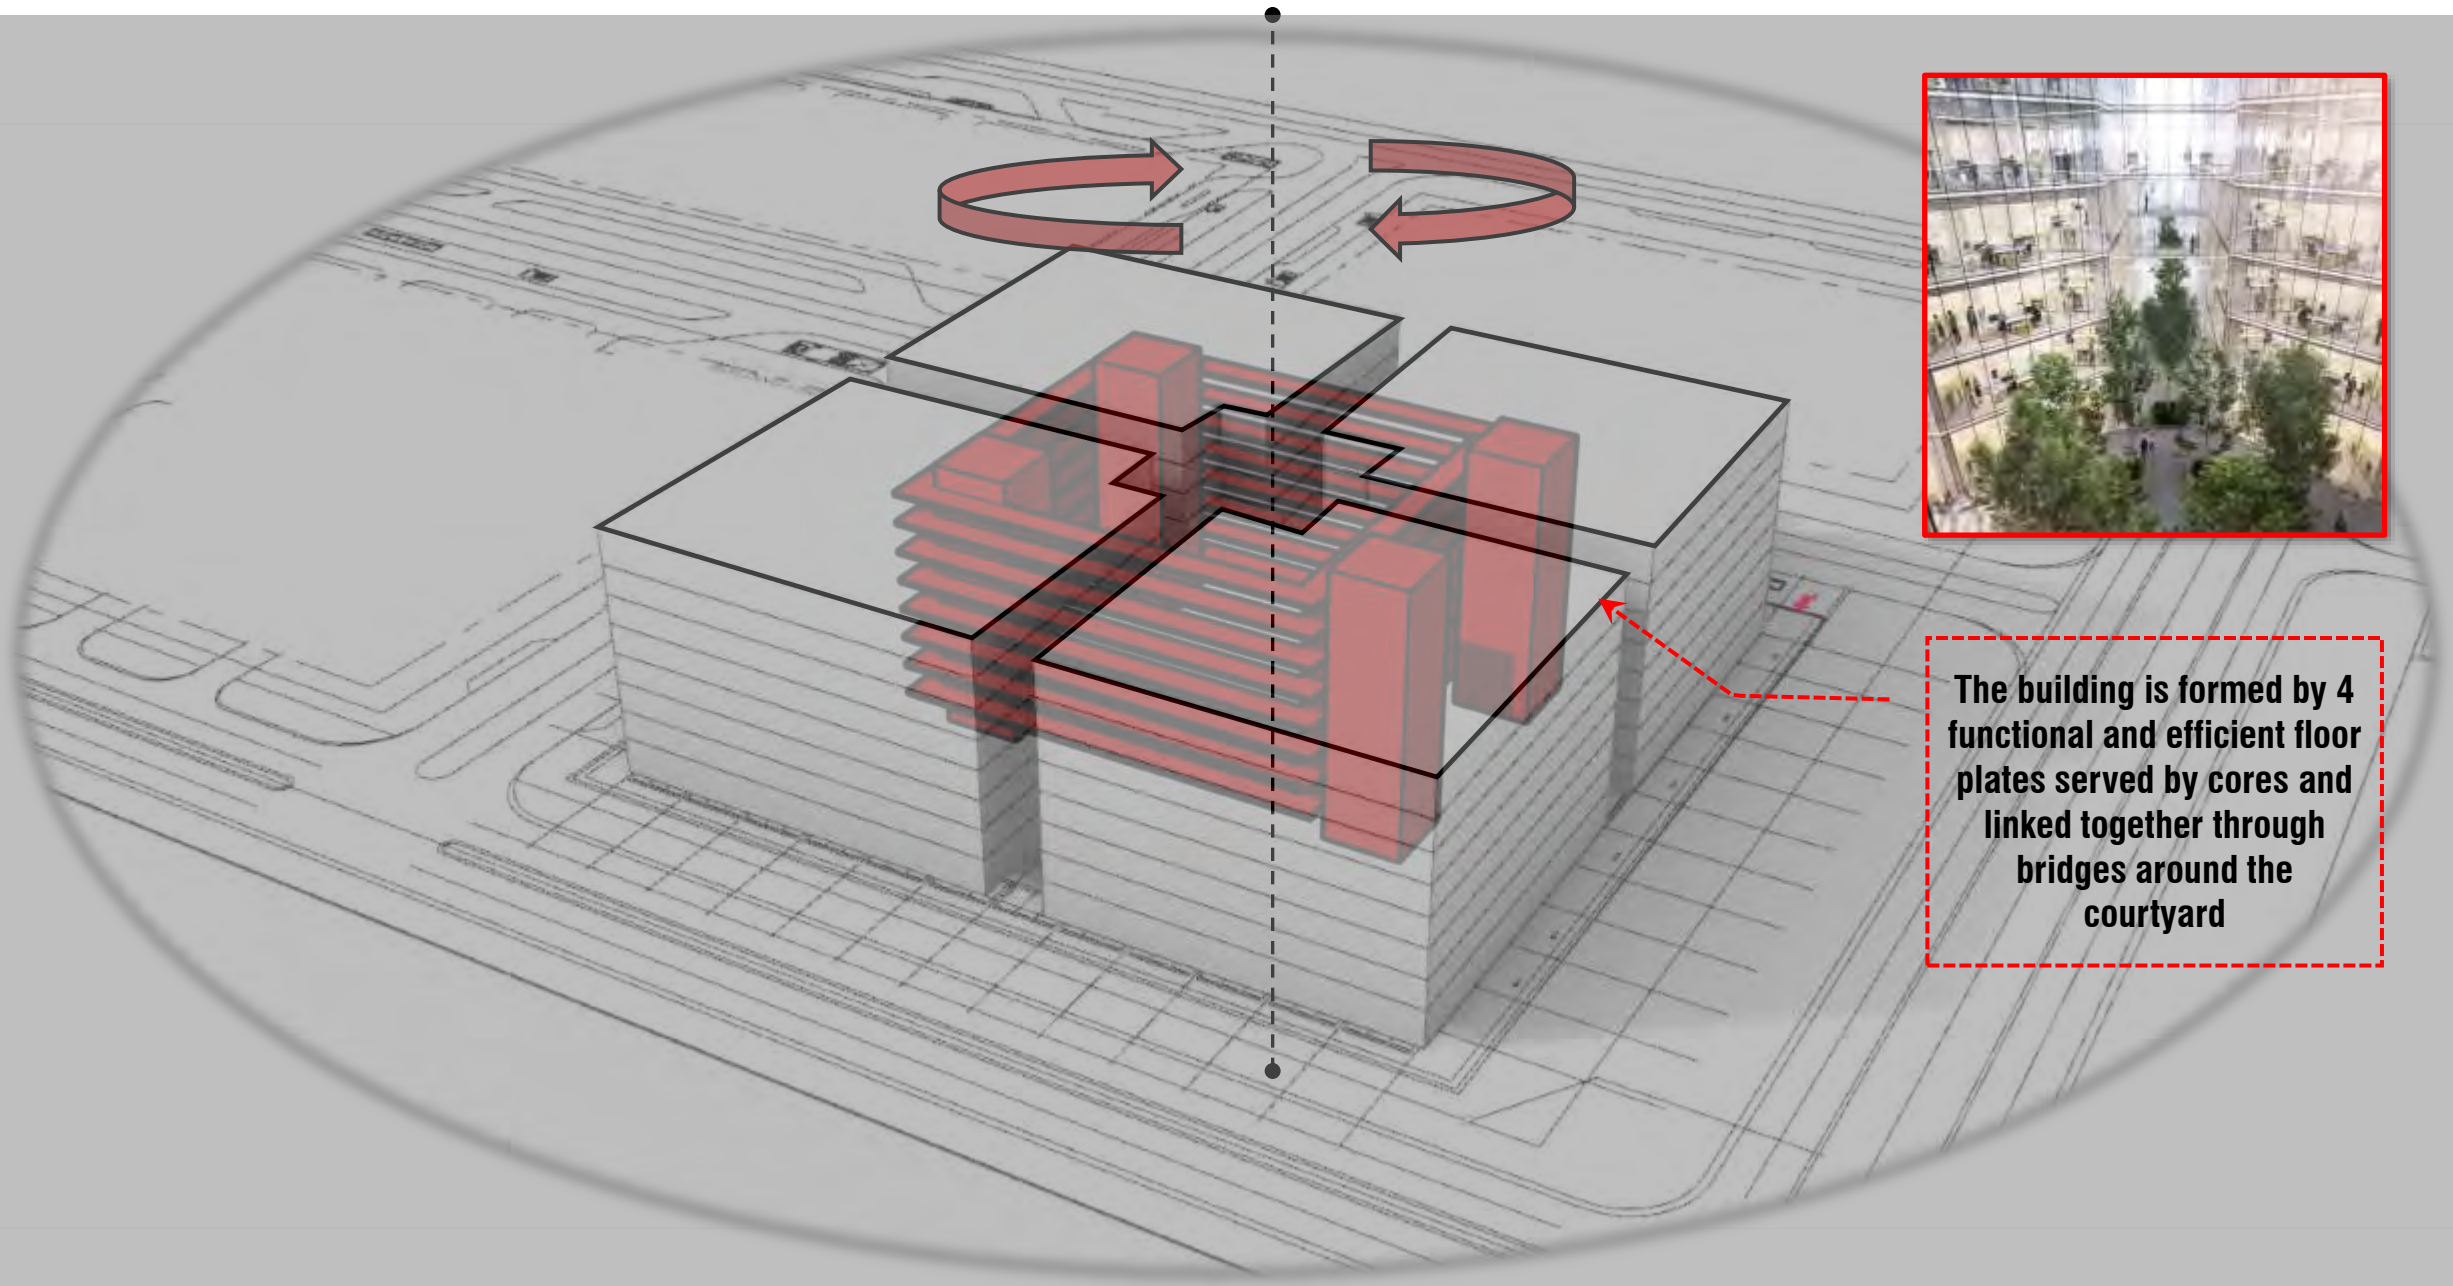

VOLUME DEVELOPMENT

The volume is divided further into 4 parts allowing for better lighting and natural ventilation, as well as a reduction of the floor plate's depth.

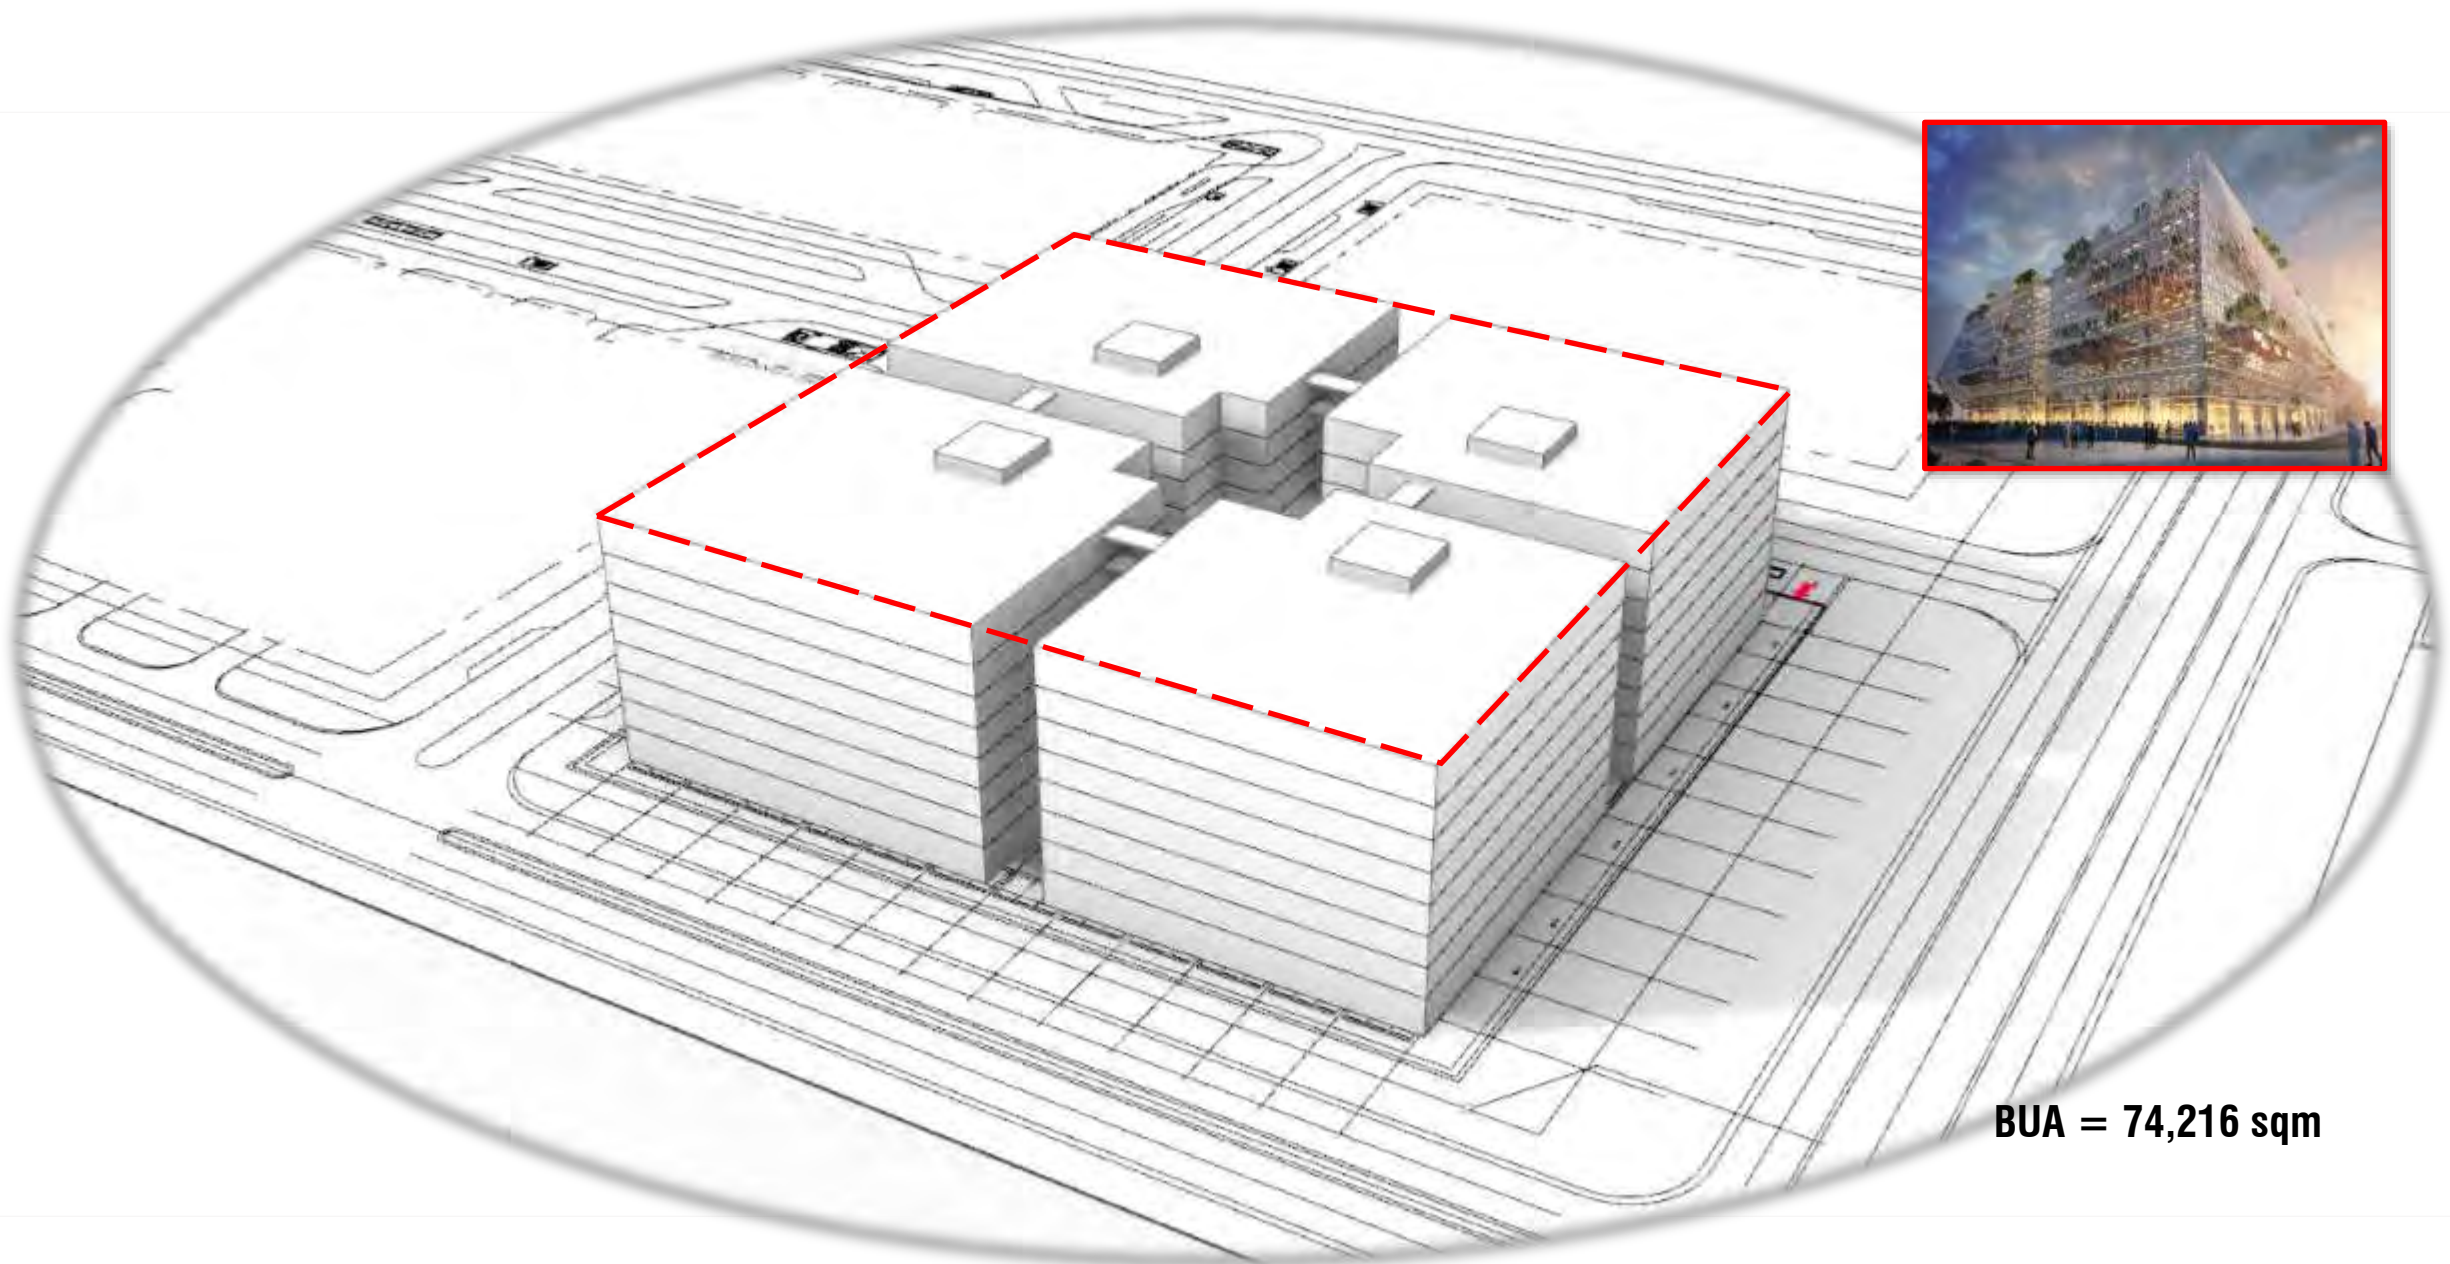

BUA = 74,216 sqm

VOLUME DEVELOPMENT

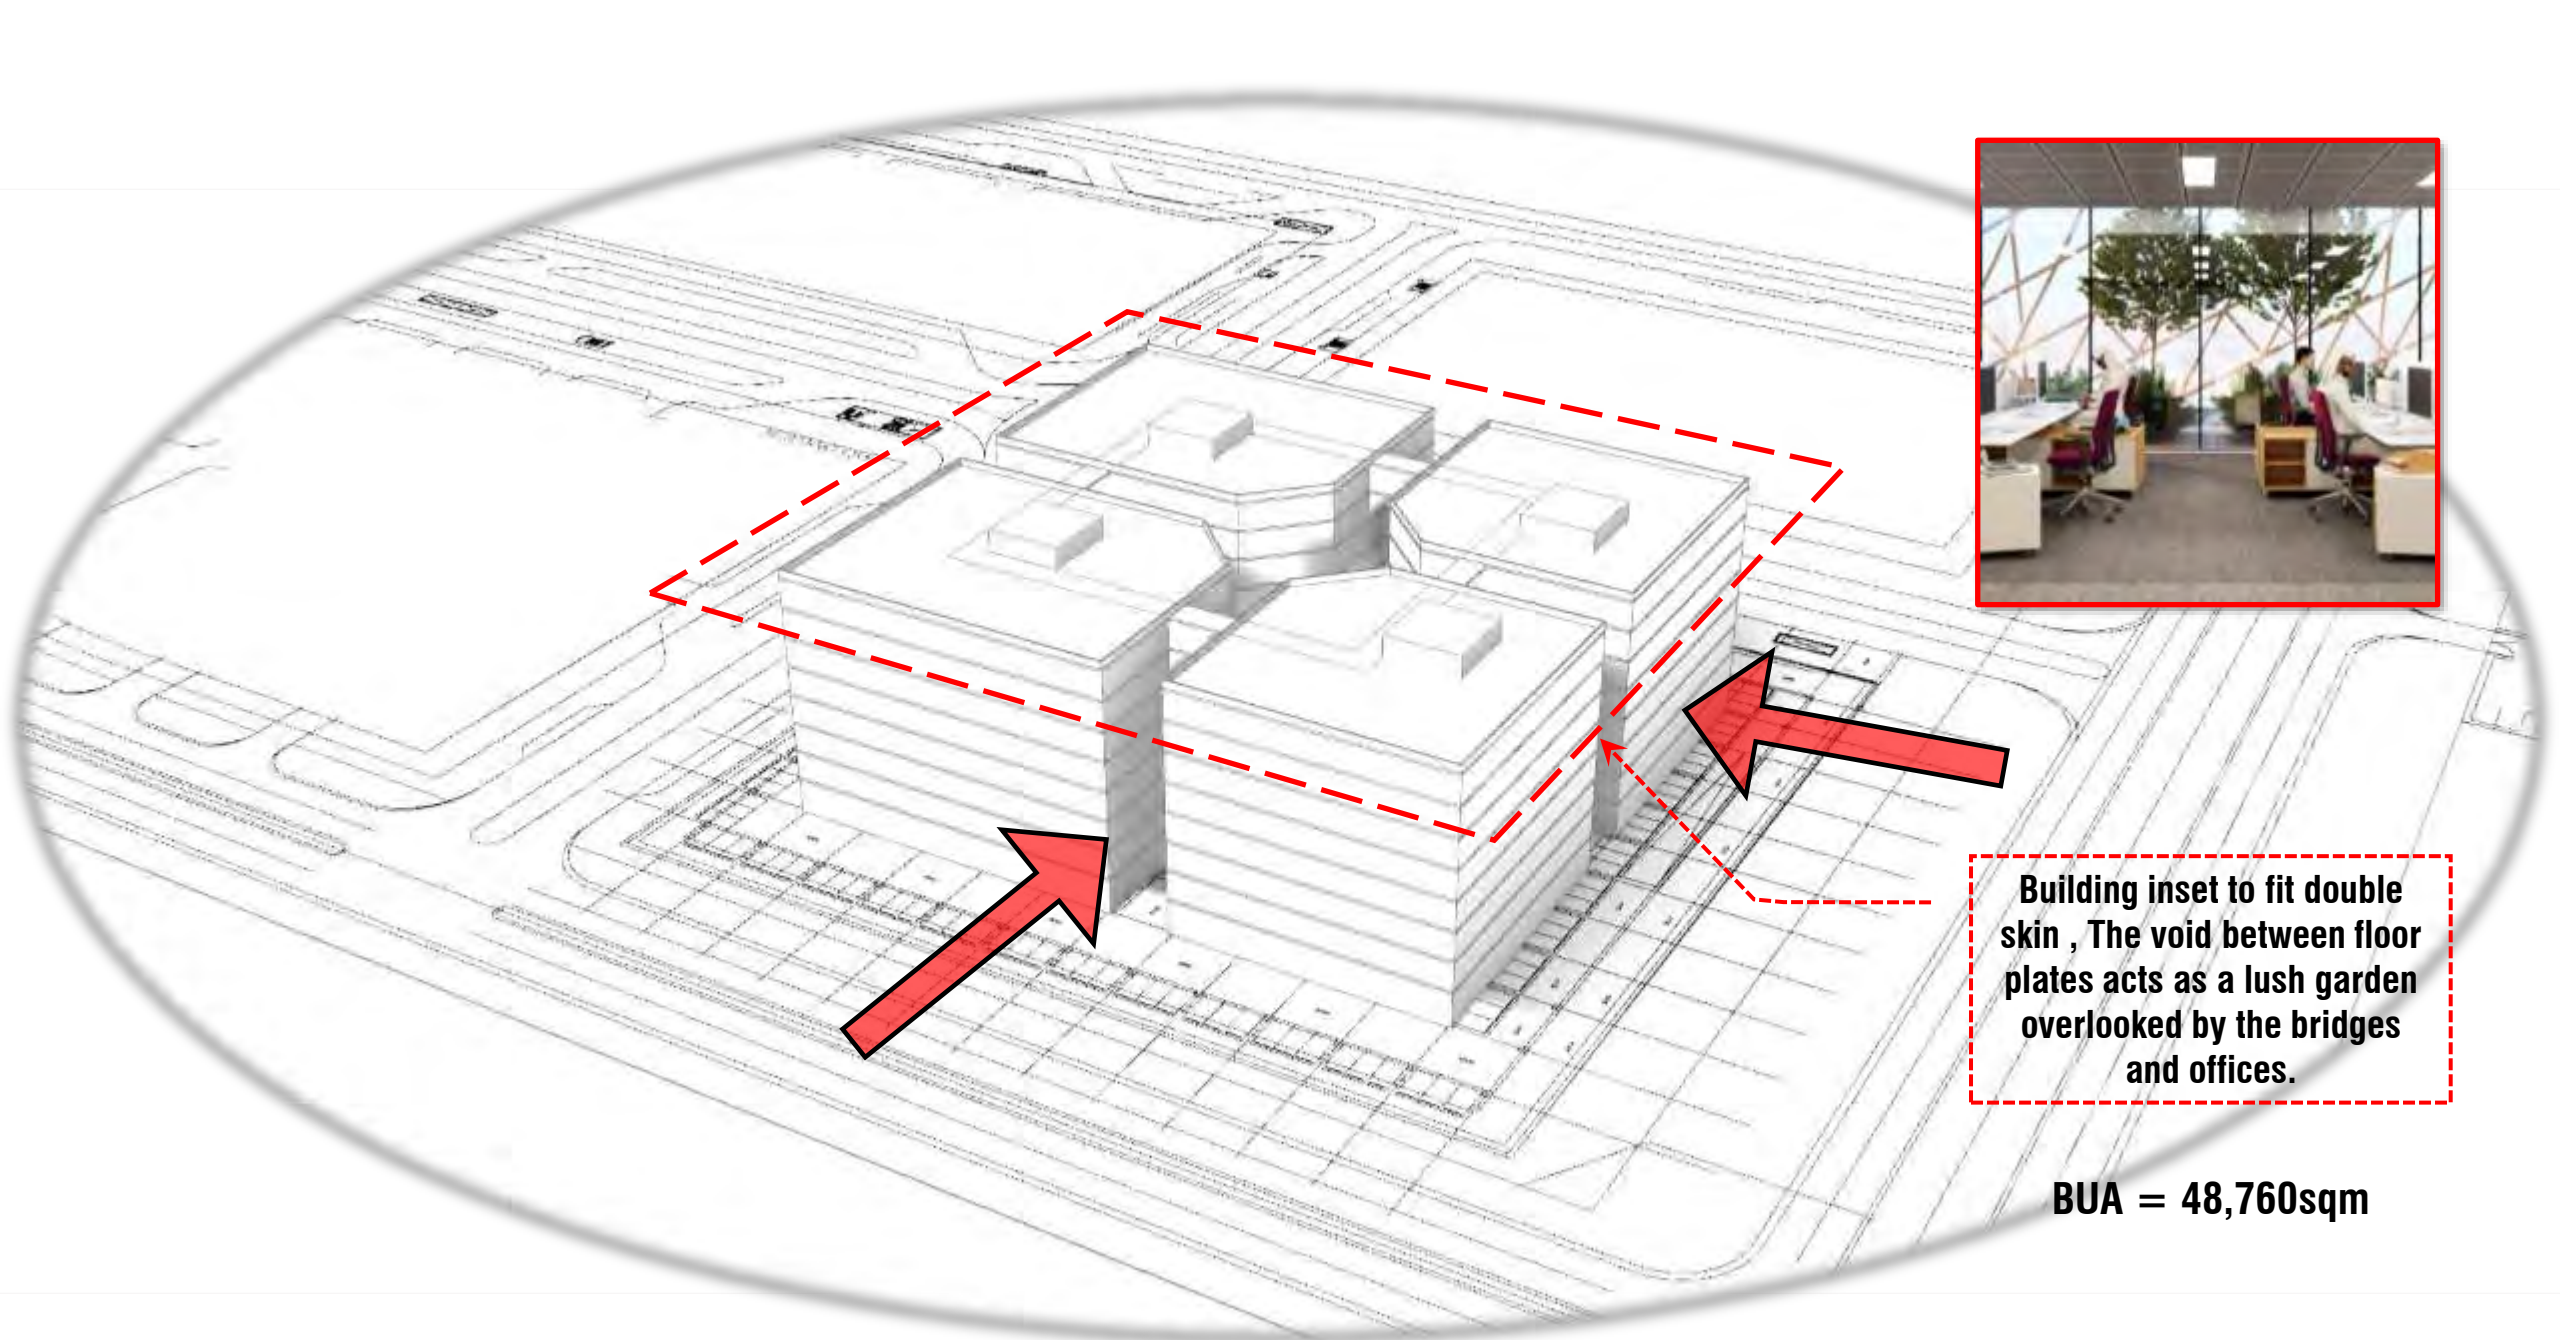

The building is formed by 4 functional and efficient floor plates served by cores and linked together through bridges around the courtyard

VOLUME DEVELOPMENT

BUA = 74,216 sqm

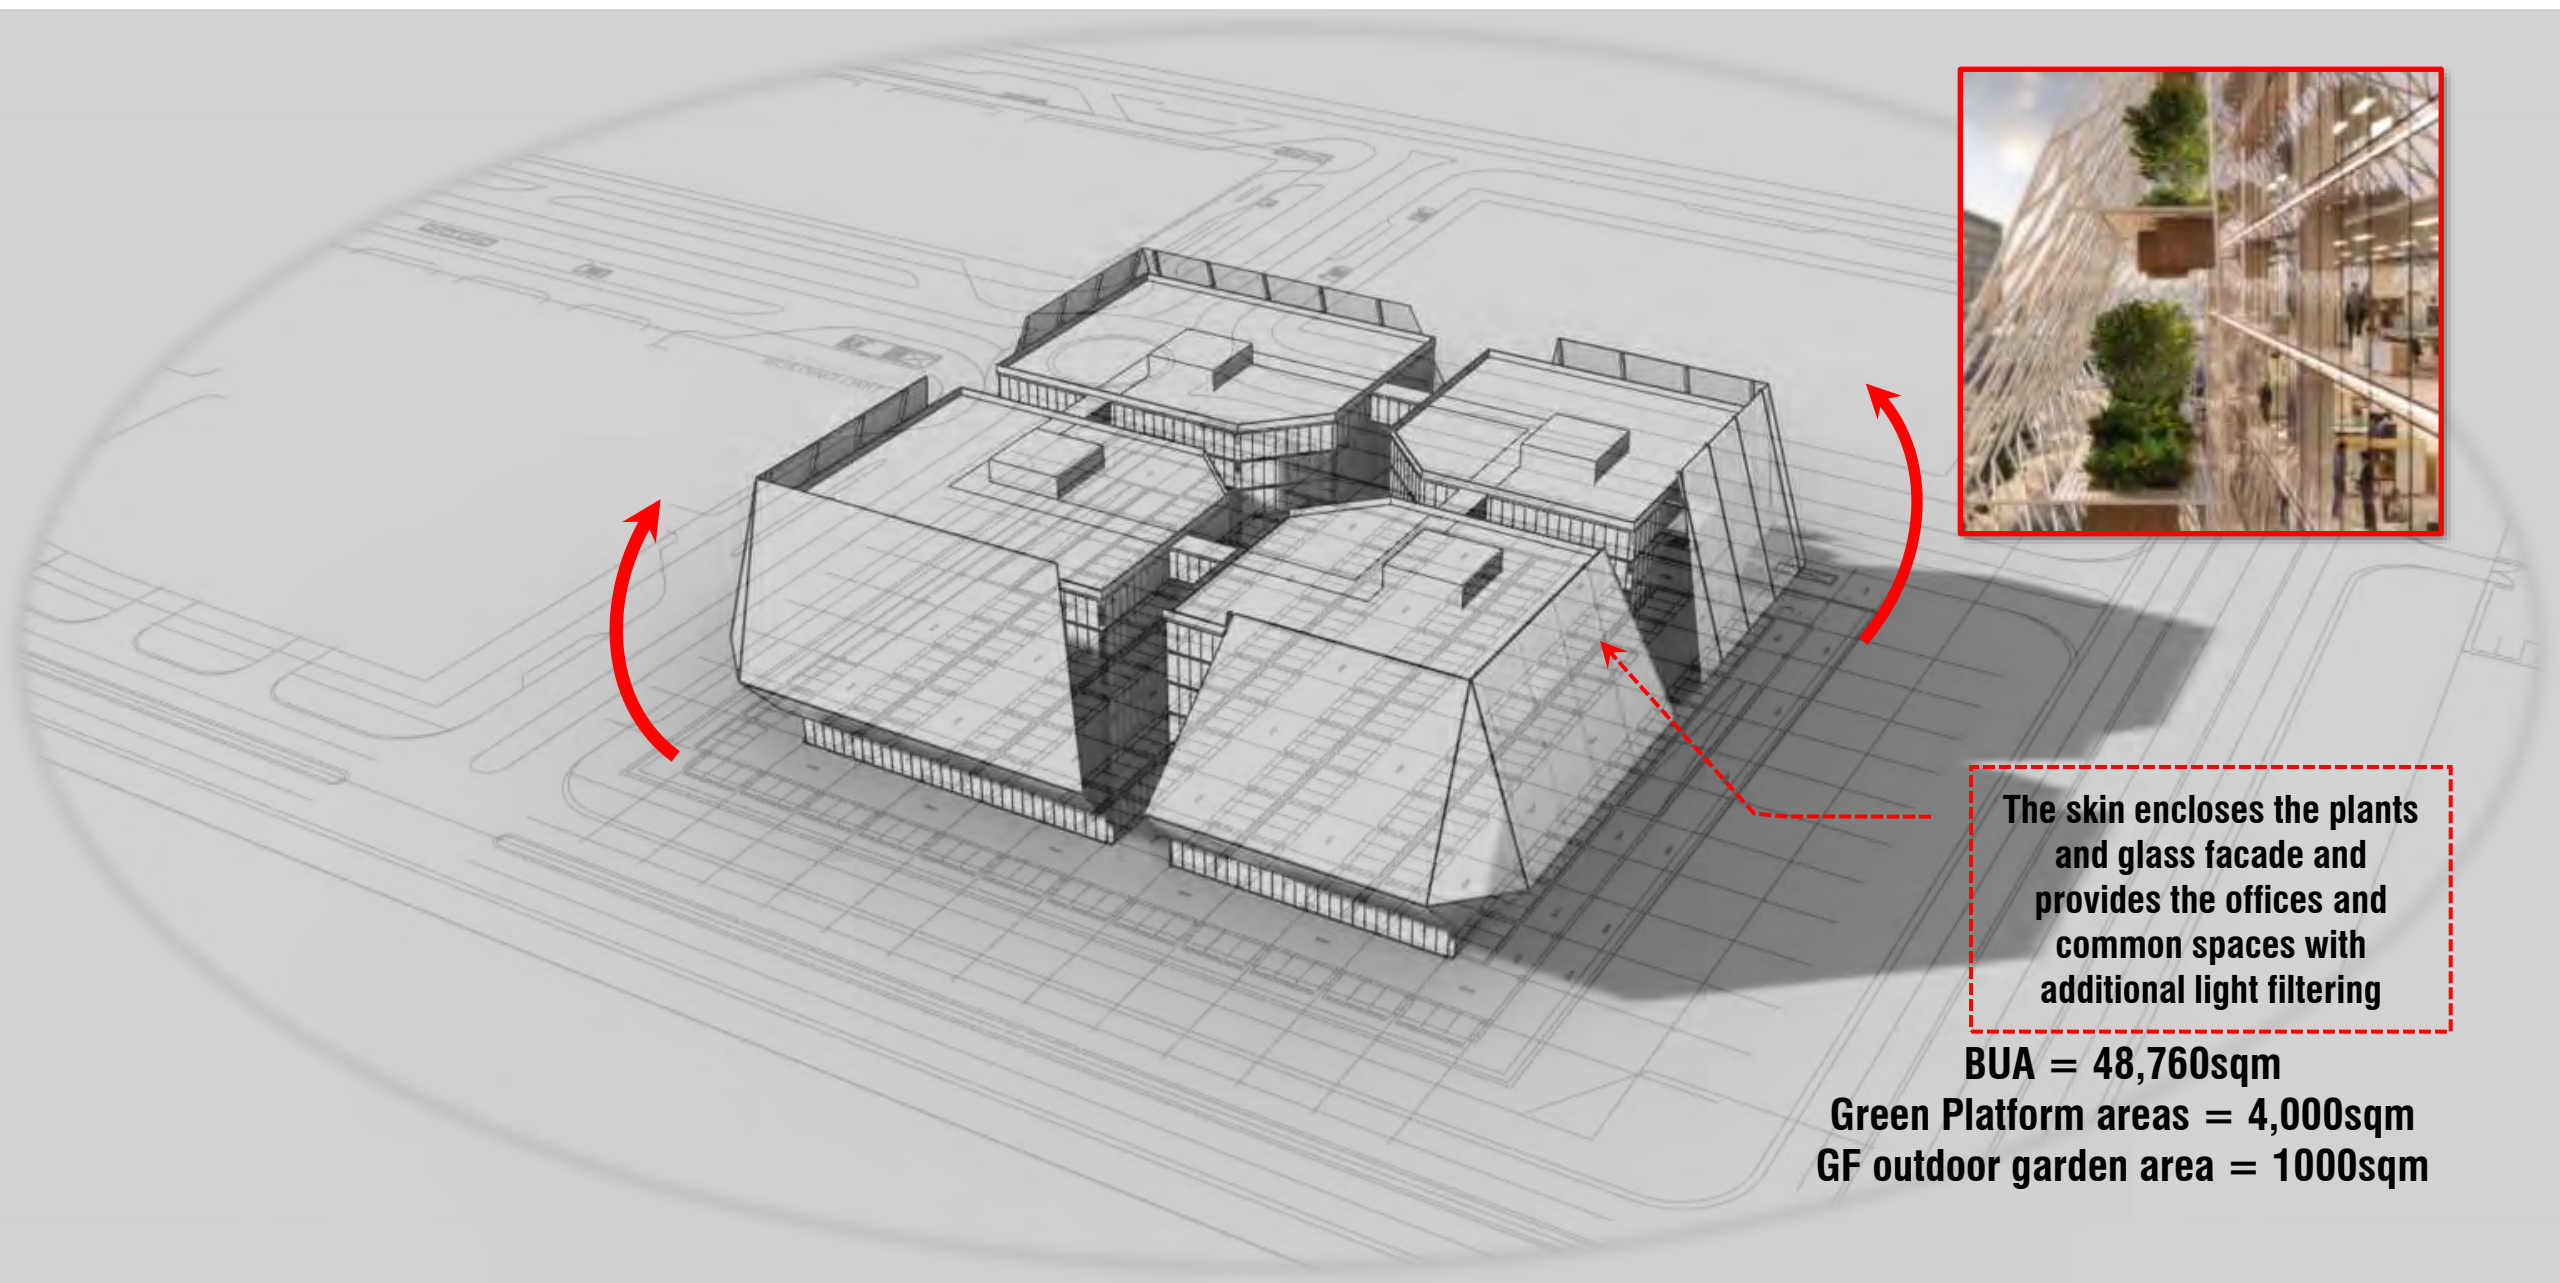

VOLUME DEVELOPMENT

Building inset to fit double skin , The void between floor plates acts as a lush garden overlooked by the bridges and offices.

BUA = 48,760sqm

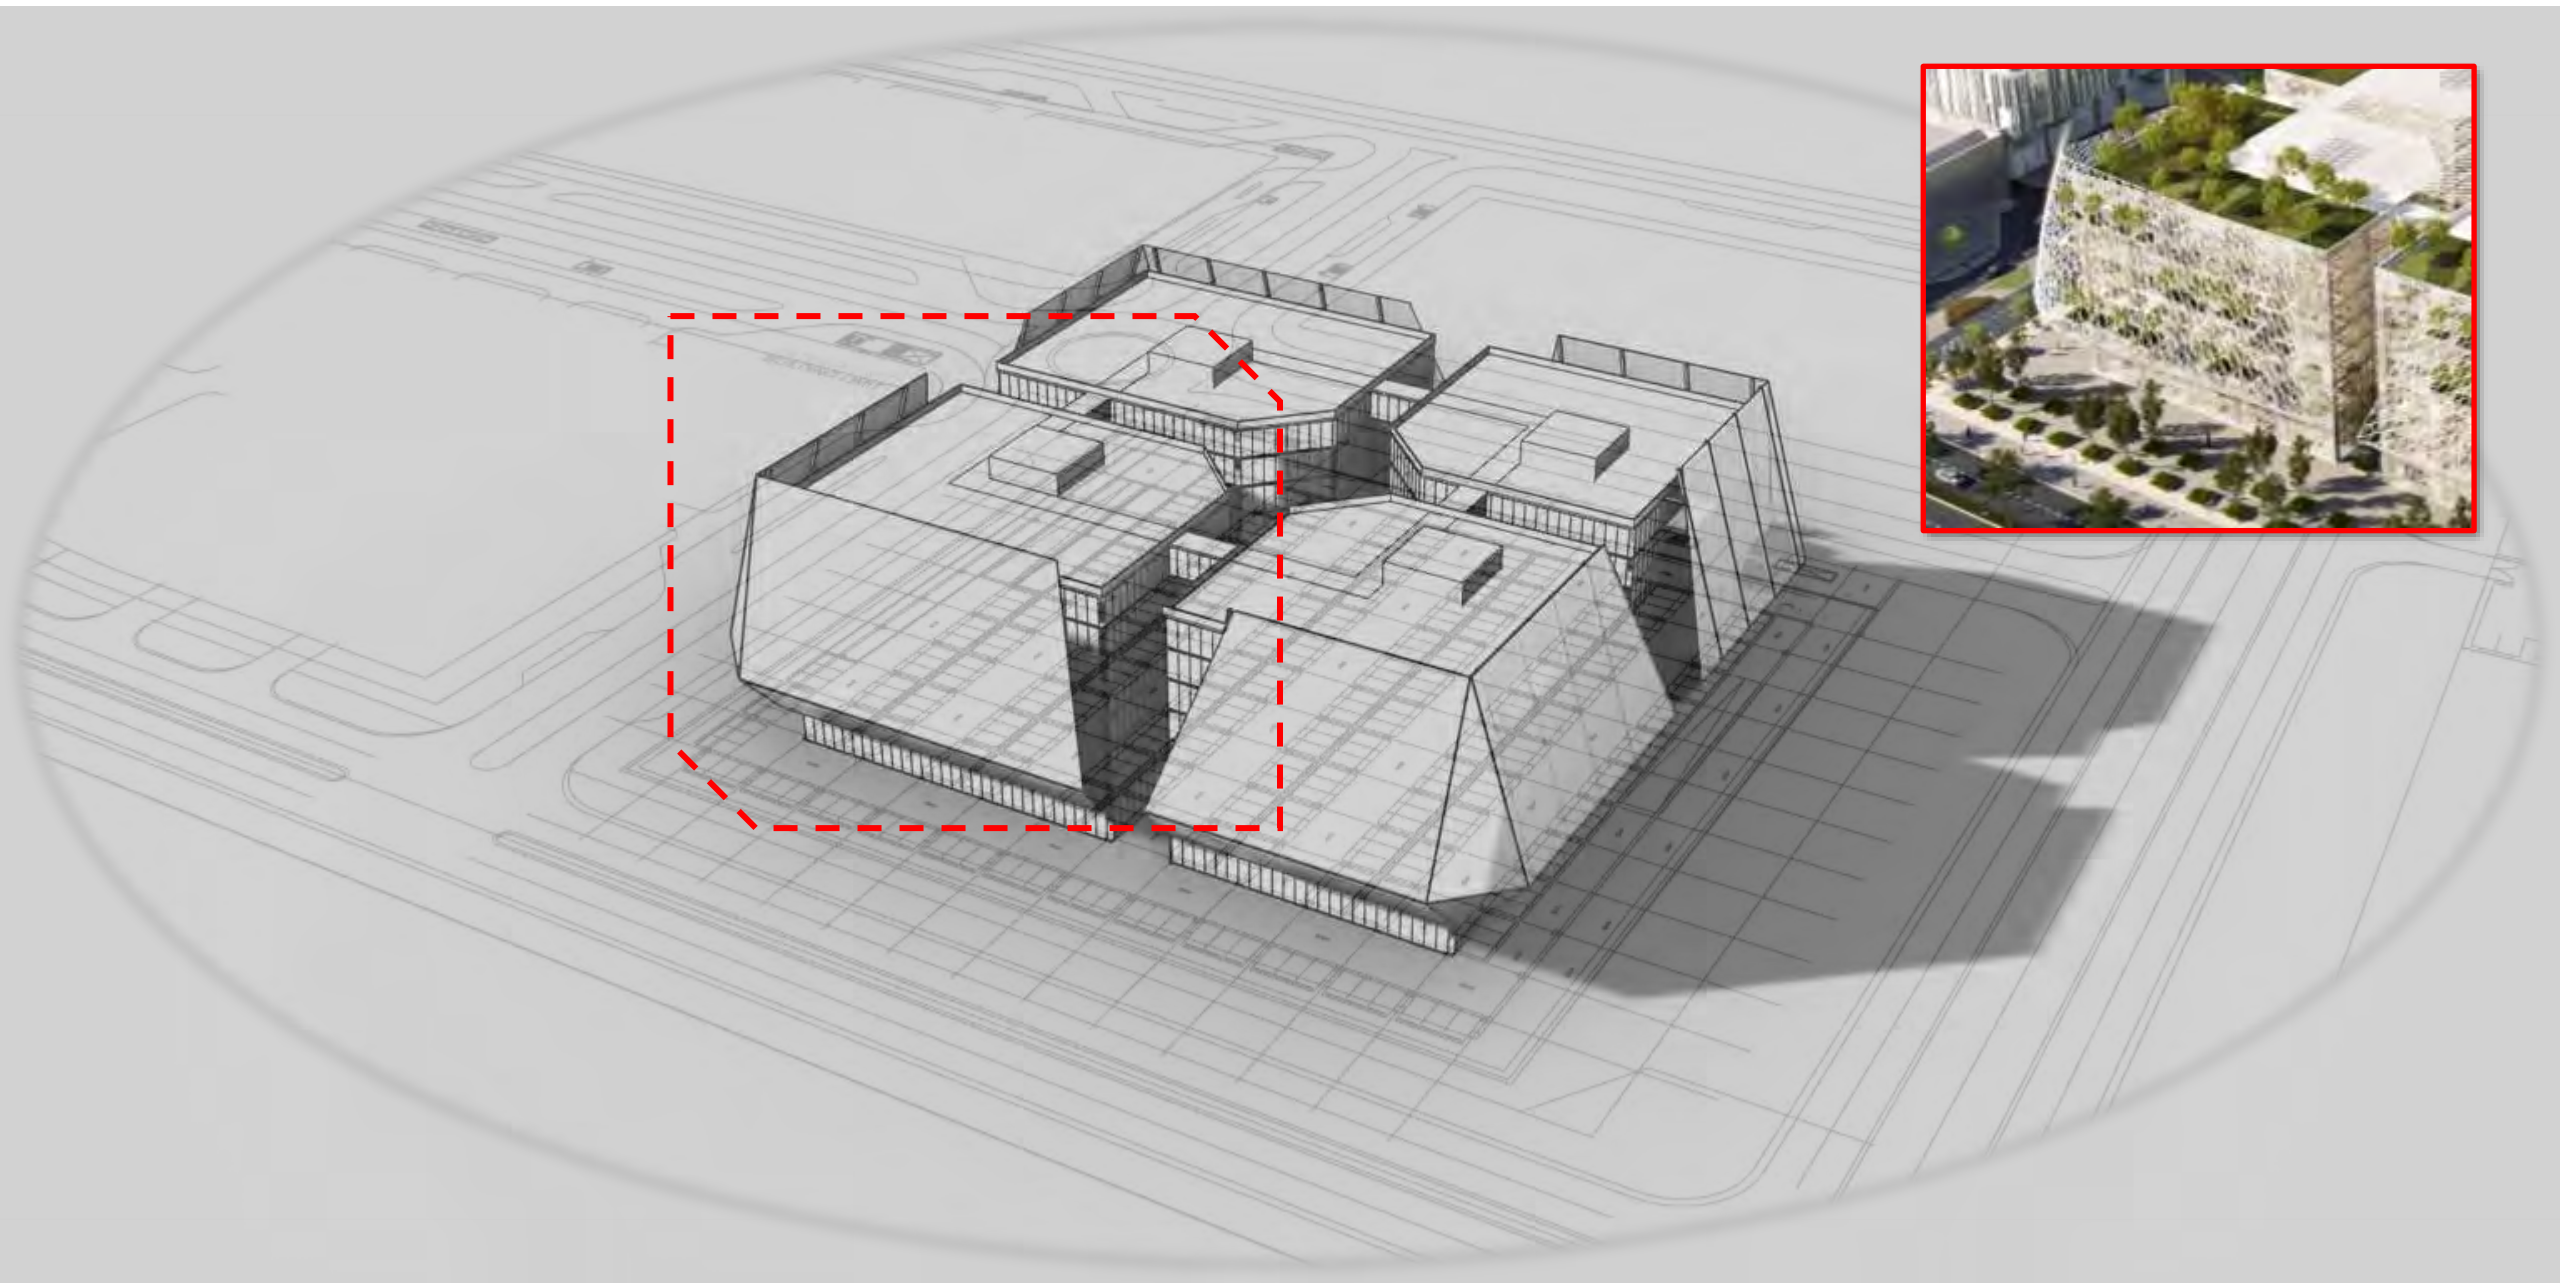

VOLUME DEVELOPMENT

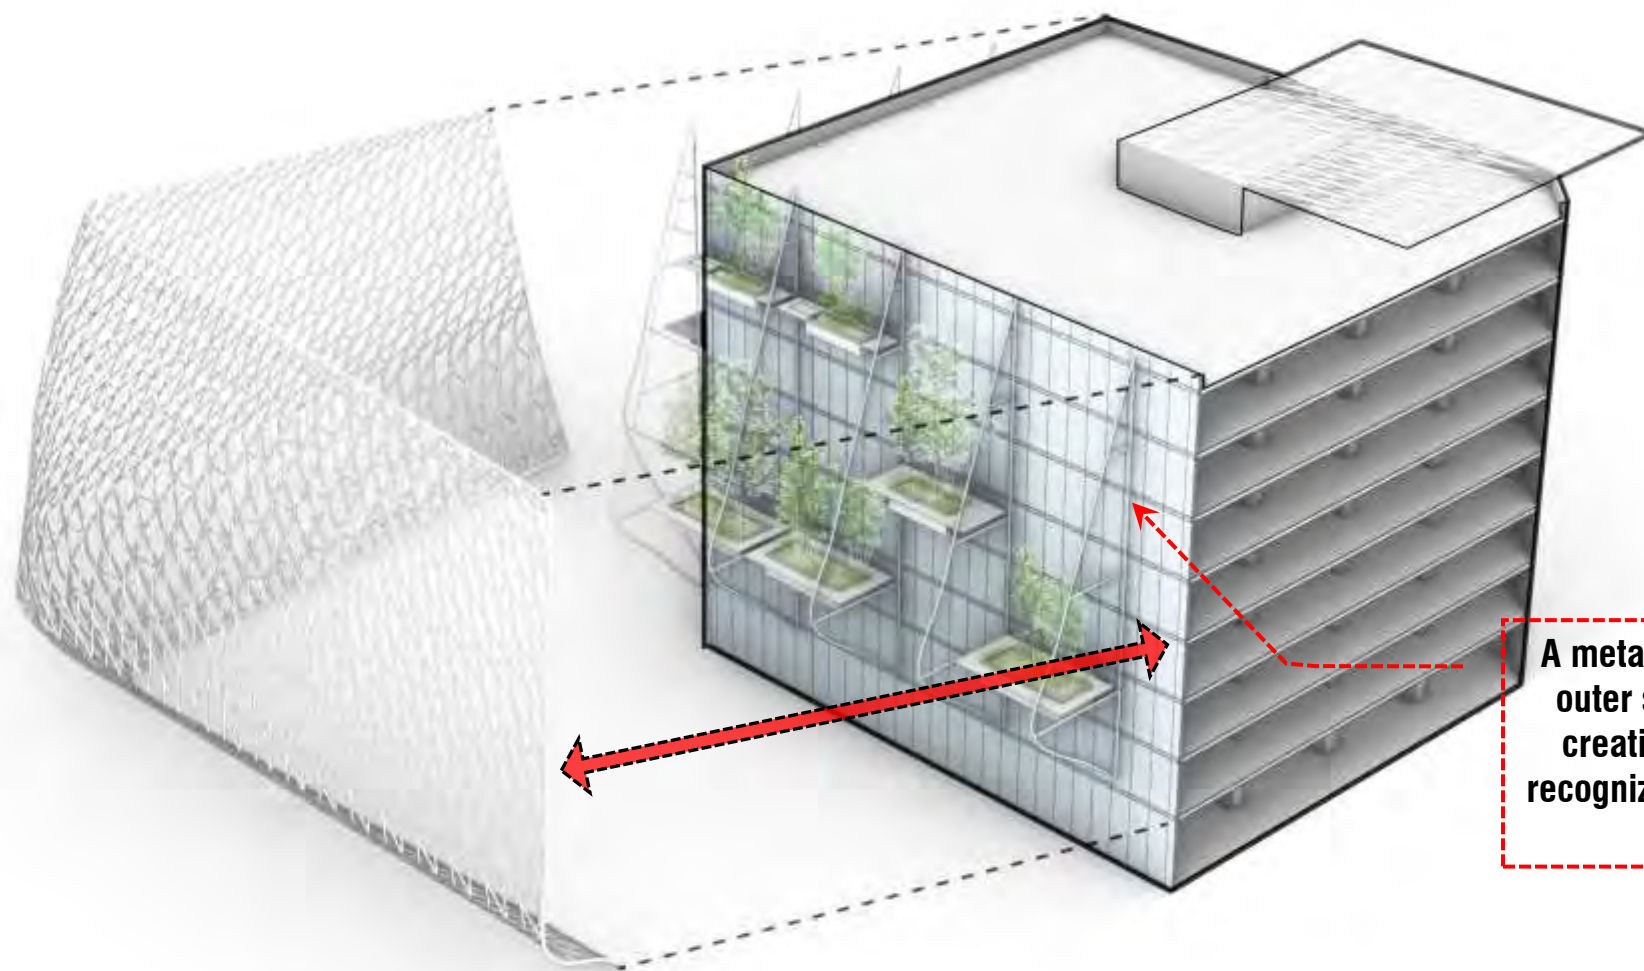

The skin encloses the plants and glass facade and provides the offices and common spaces with additional light filtering

BUA = 48,760sqm
Green Platform areas = 4,000sqm
GF outdoor garden area = 1000sqm

VOLUME DEVELOPMENT

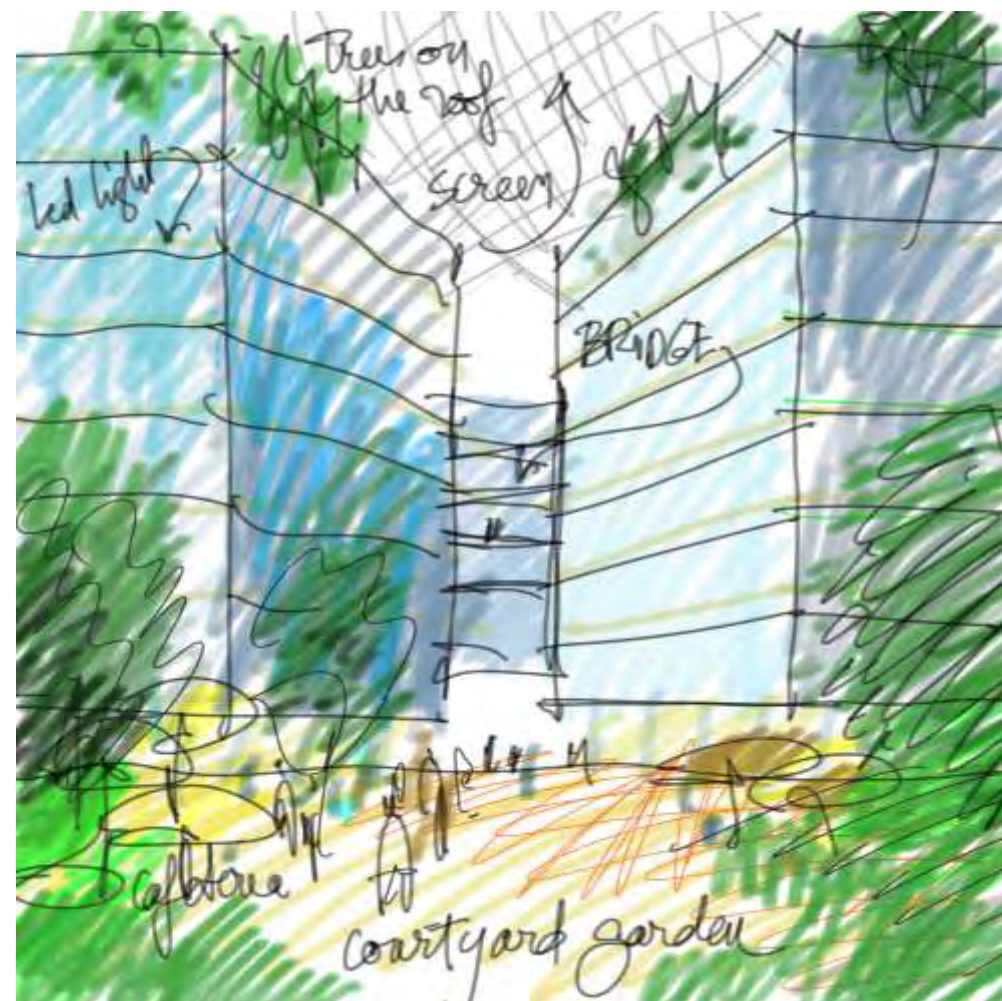

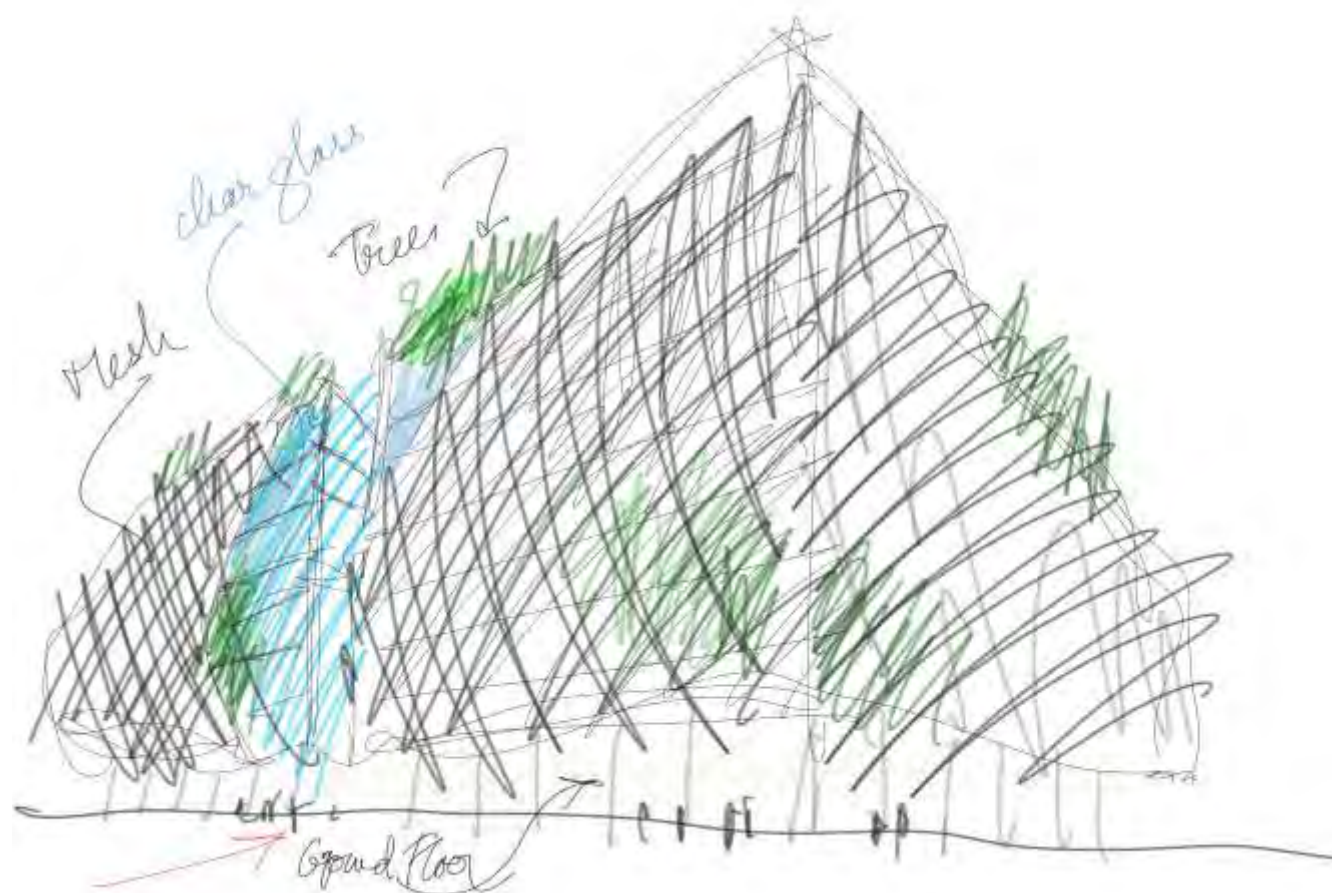

VOLUME DEVELOPMENT

A metal structure forms the outer skin of the building, creating a unique aspect recognizable from the land or the air.

The skin continues as a roof canopy allowing the same taxonomy throughout the building as well as shading the inner spaces

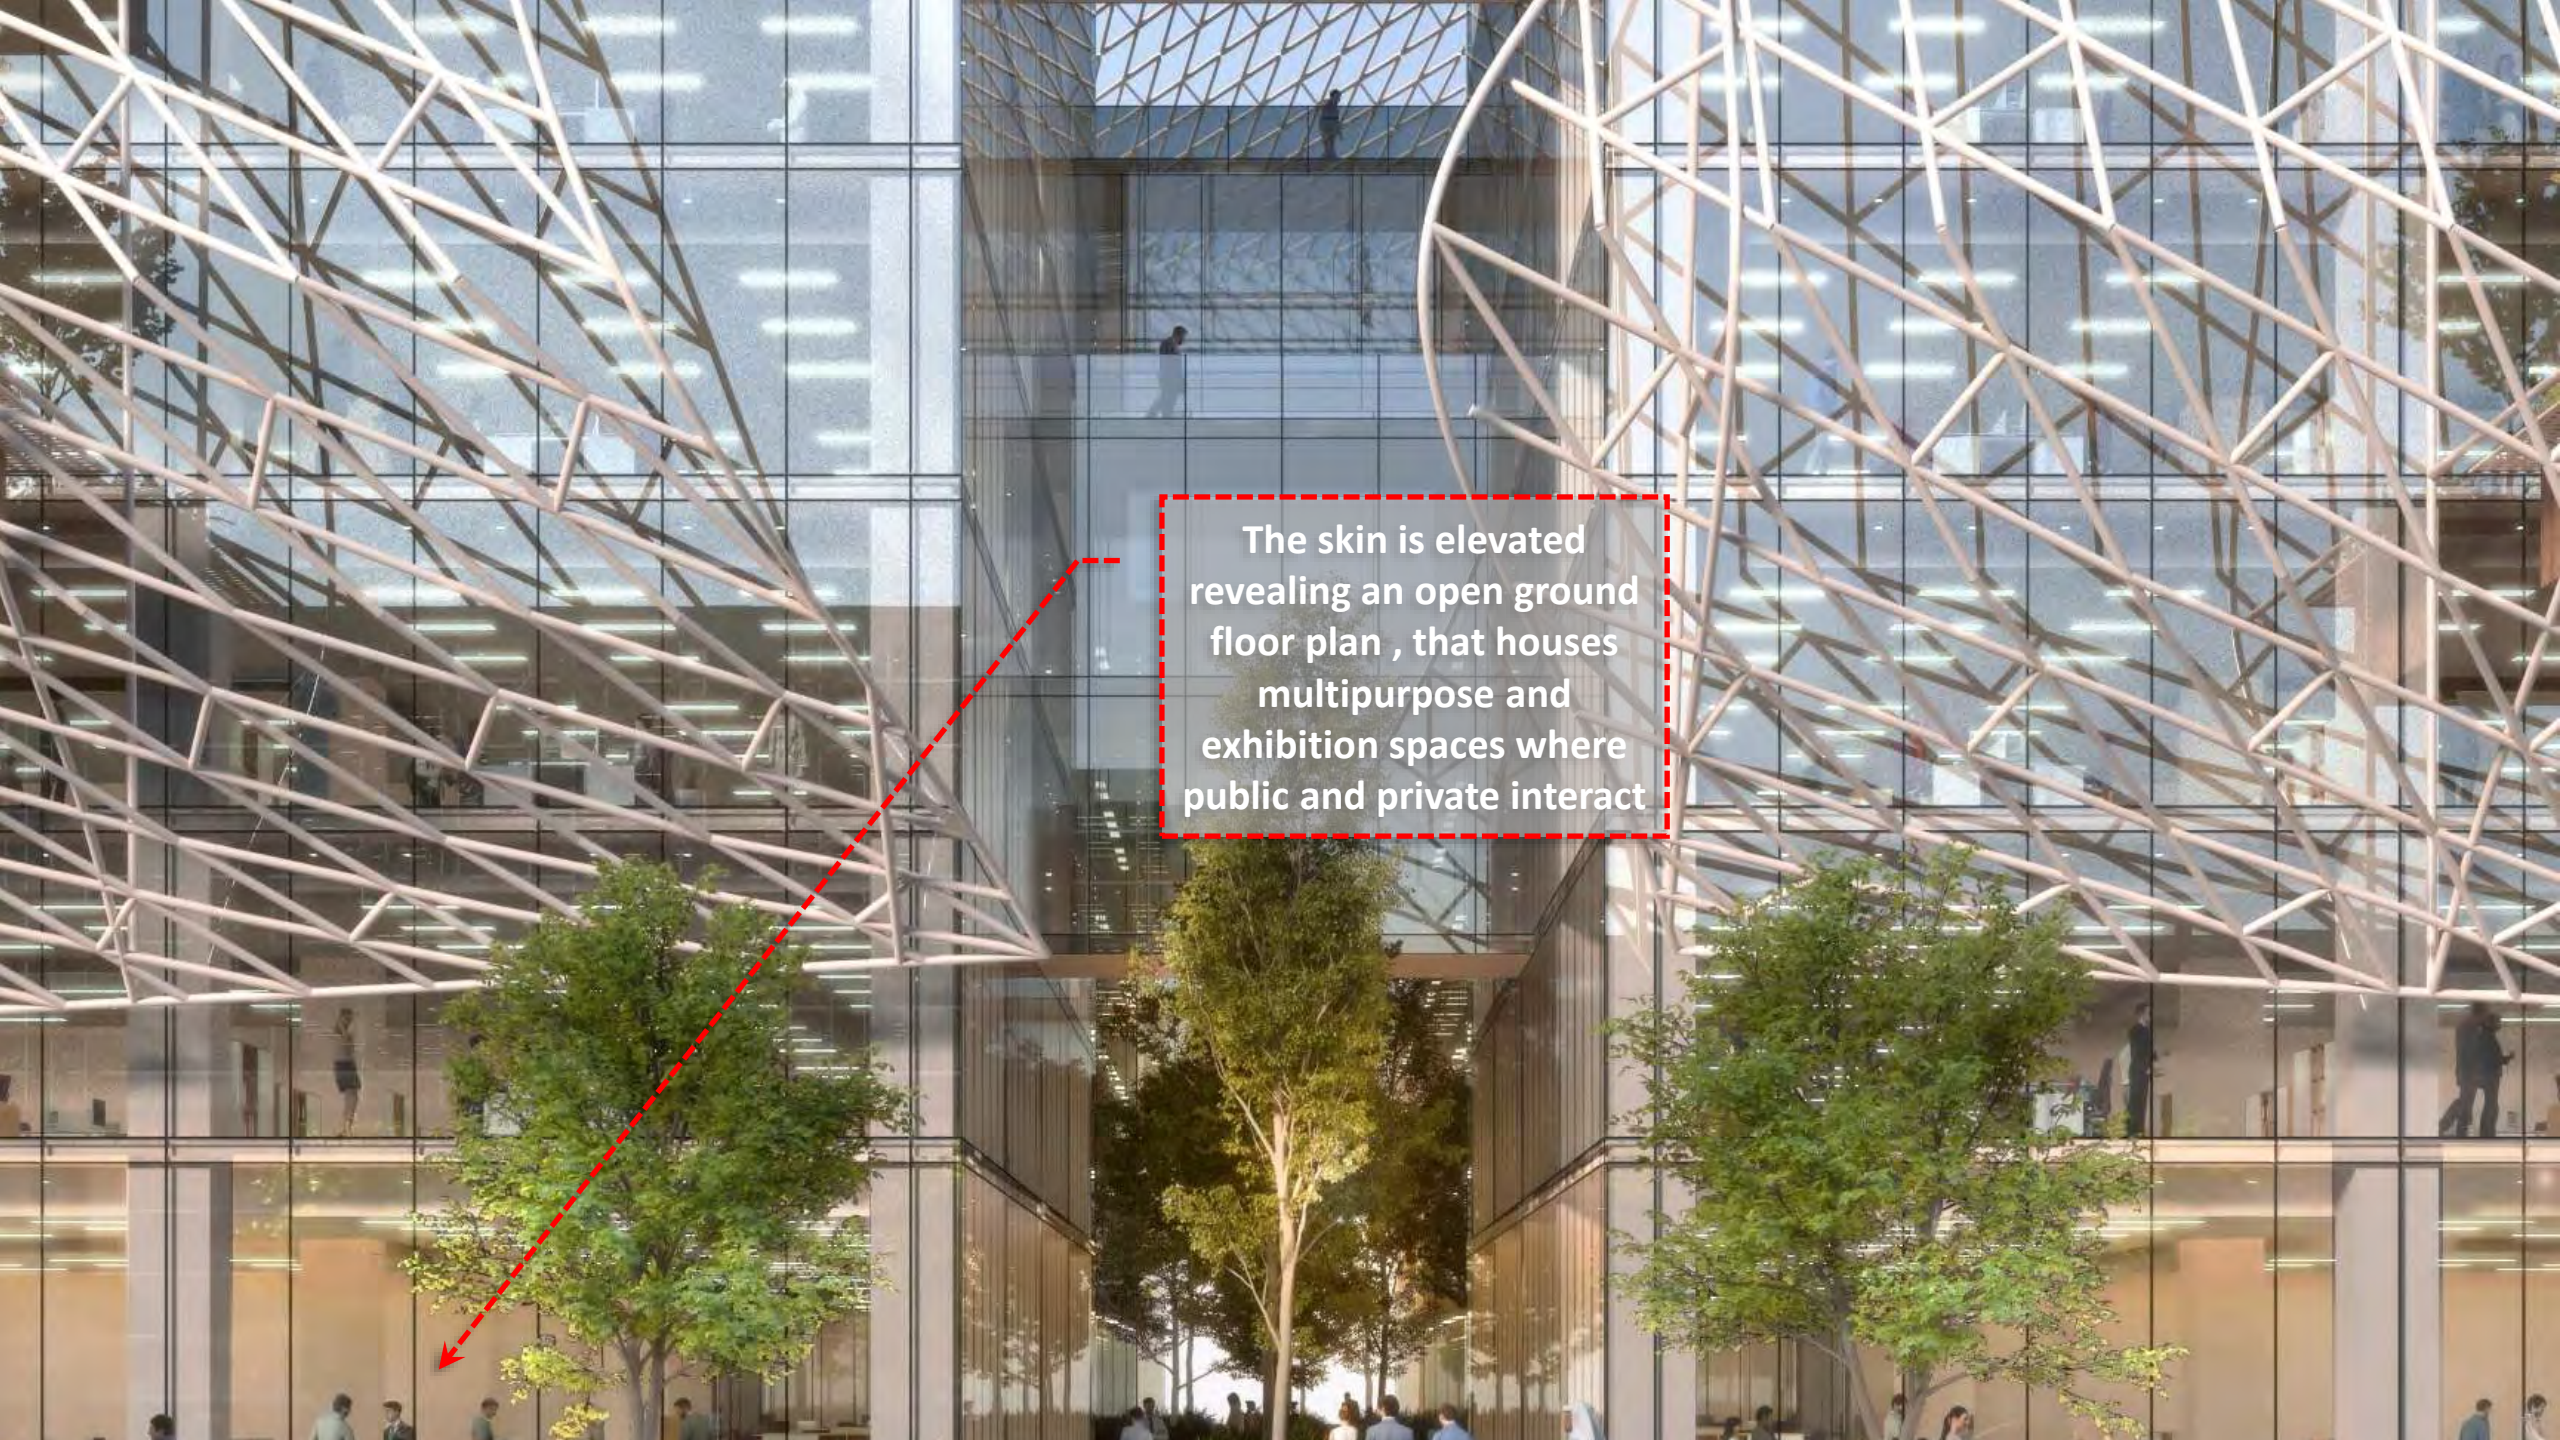

Tree planters wrap around the ground floor, façade and roof

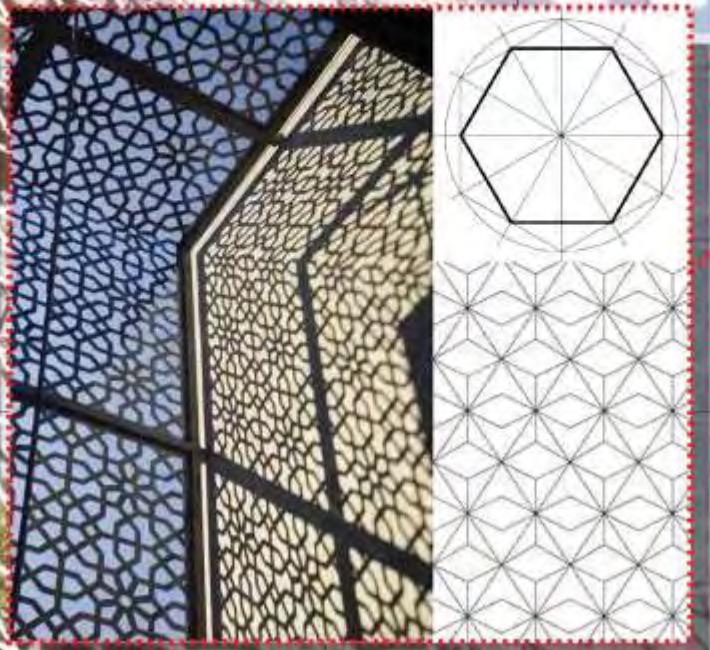

Skin will be further developed through solar studies by tailoring opening sizes and planter placement

The voids invite user
into accessing the
building and the
common garden

The skin is elevated revealing an open ground floor plan , that houses multipurpose and exhibition spaces where public and private interact

Mashrabiya inspired
façade by revisiting
Islamic hexagonal grid
pattern

perforated roof
ventilates the
central garden

Cafeteria seating is placed in the courtyard

Outdoor extension that federates all common social activities

Bridges allow for
circulation
overlooking both
the garden and the
street

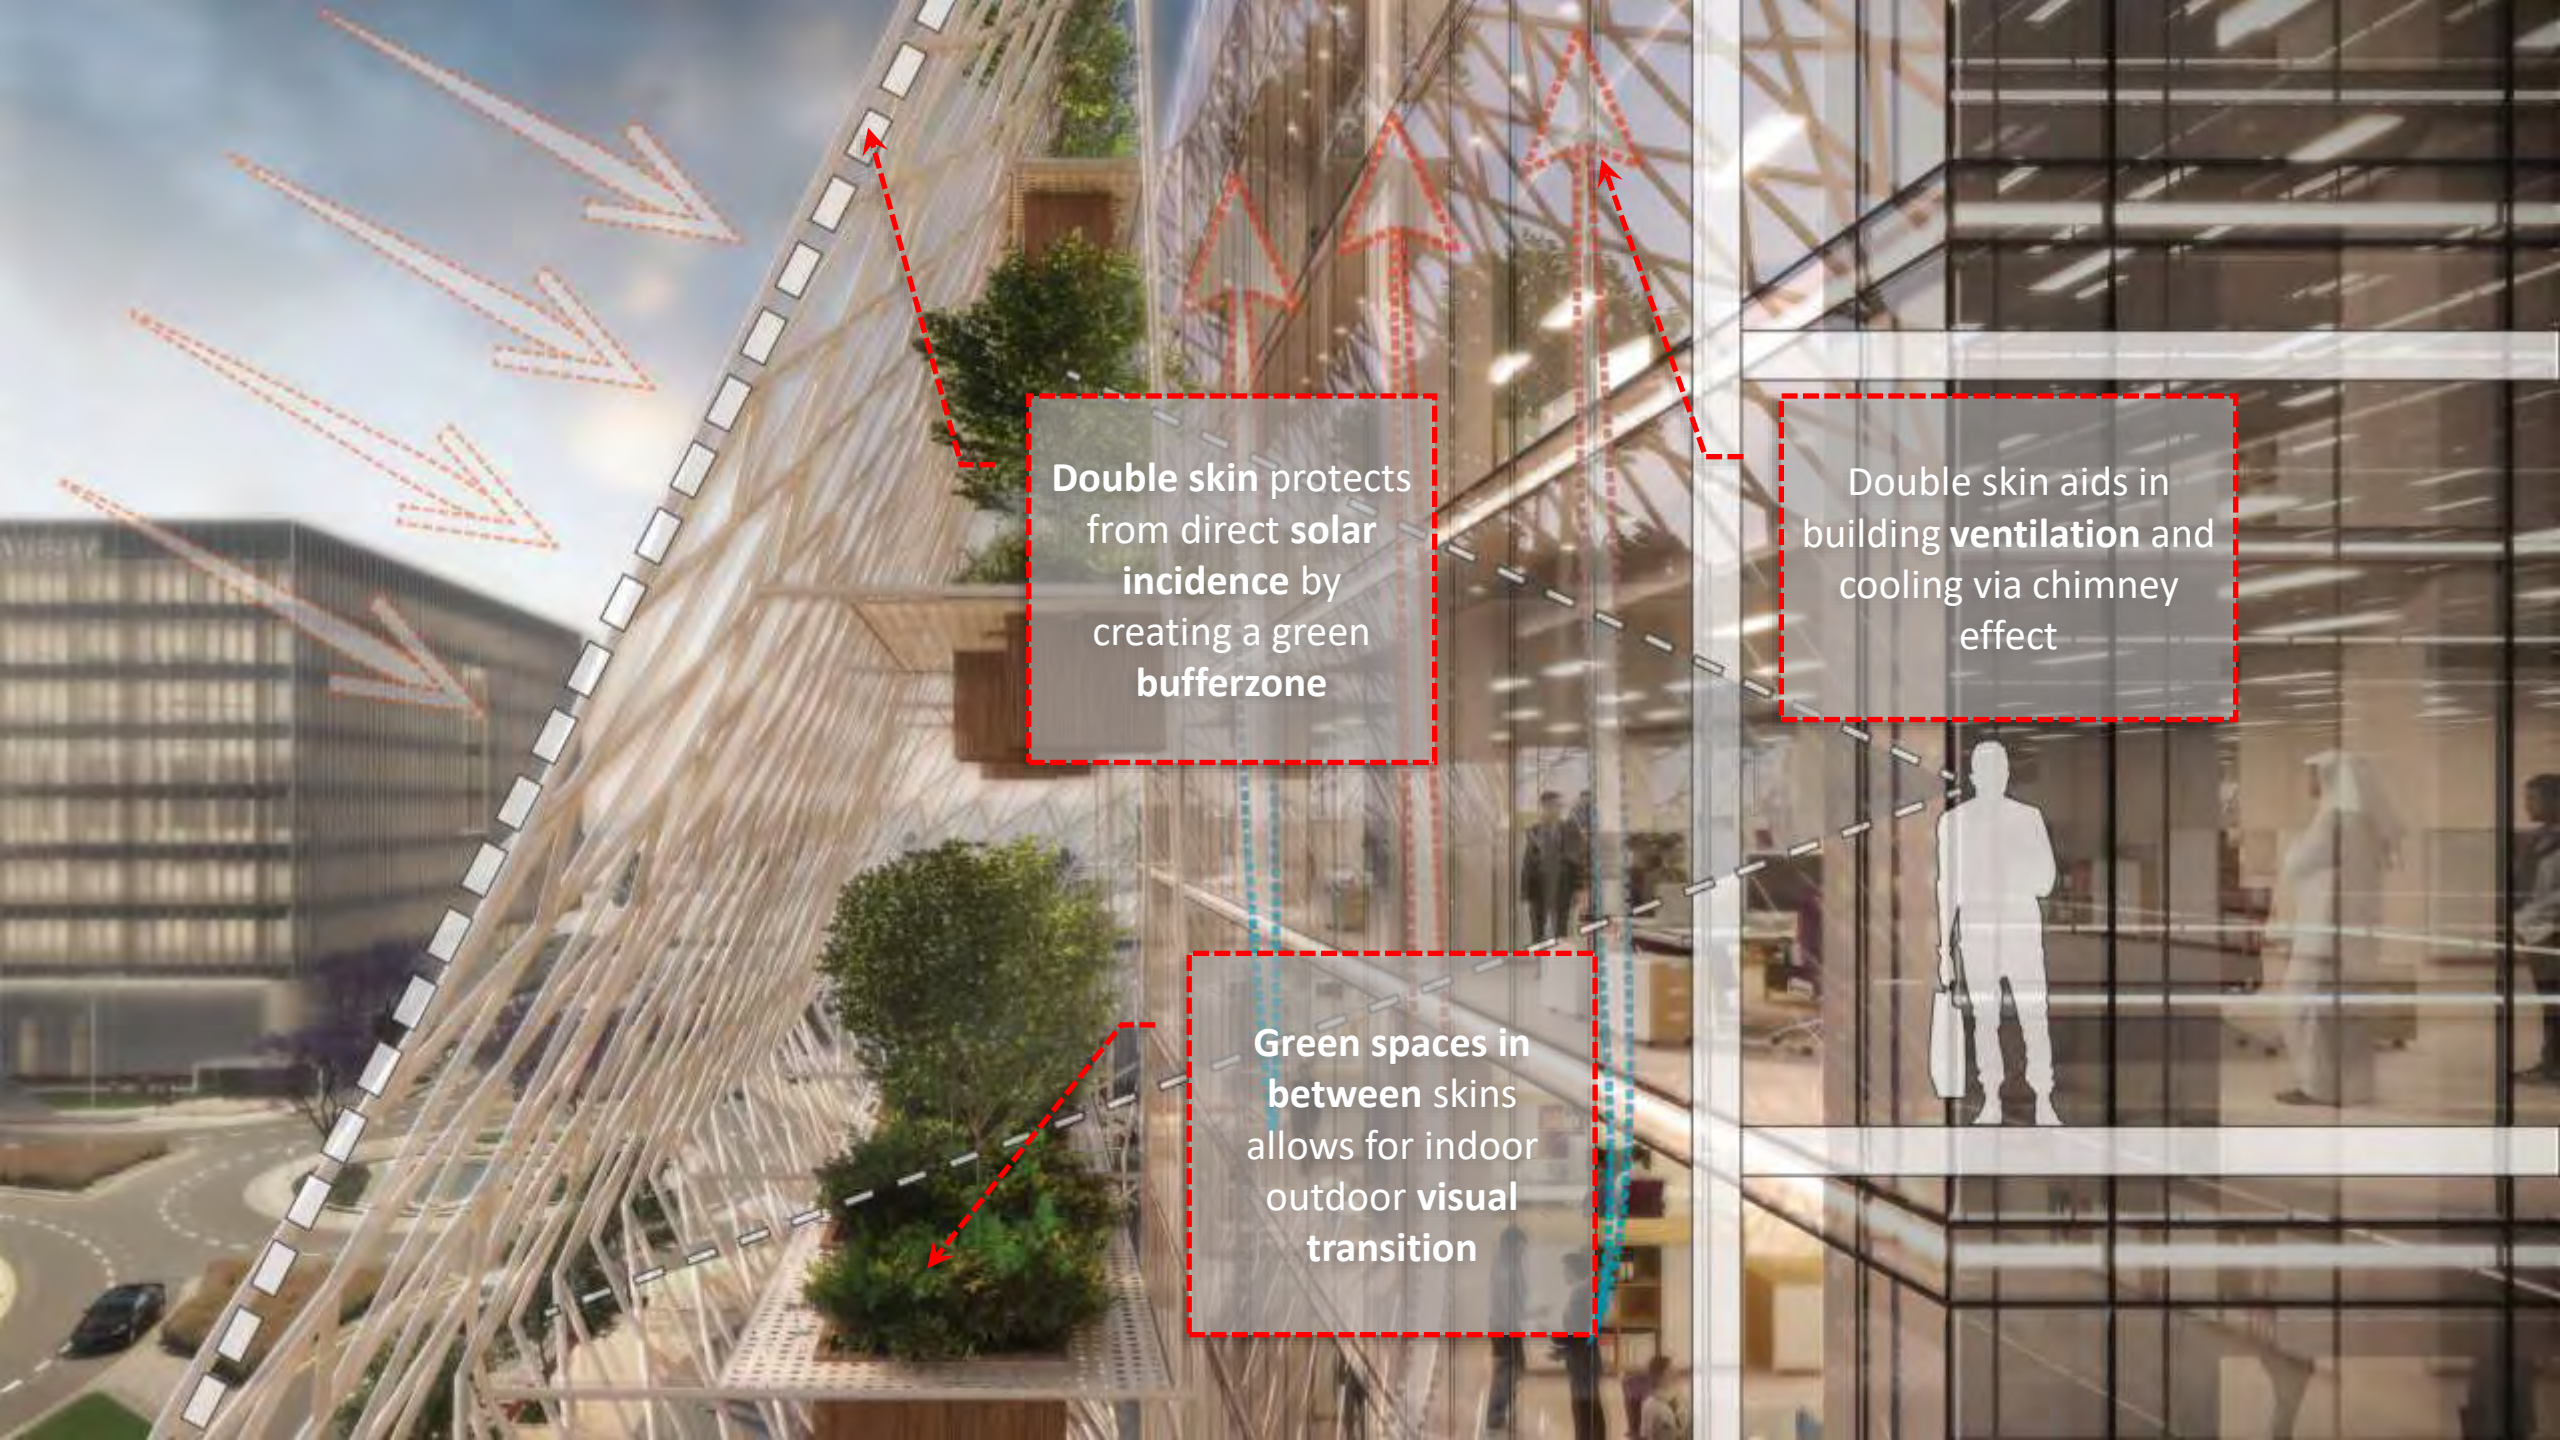

Outdoor extension that
federates all common
social activities

deep planters to
contain tall trees

Perforated steel
decking

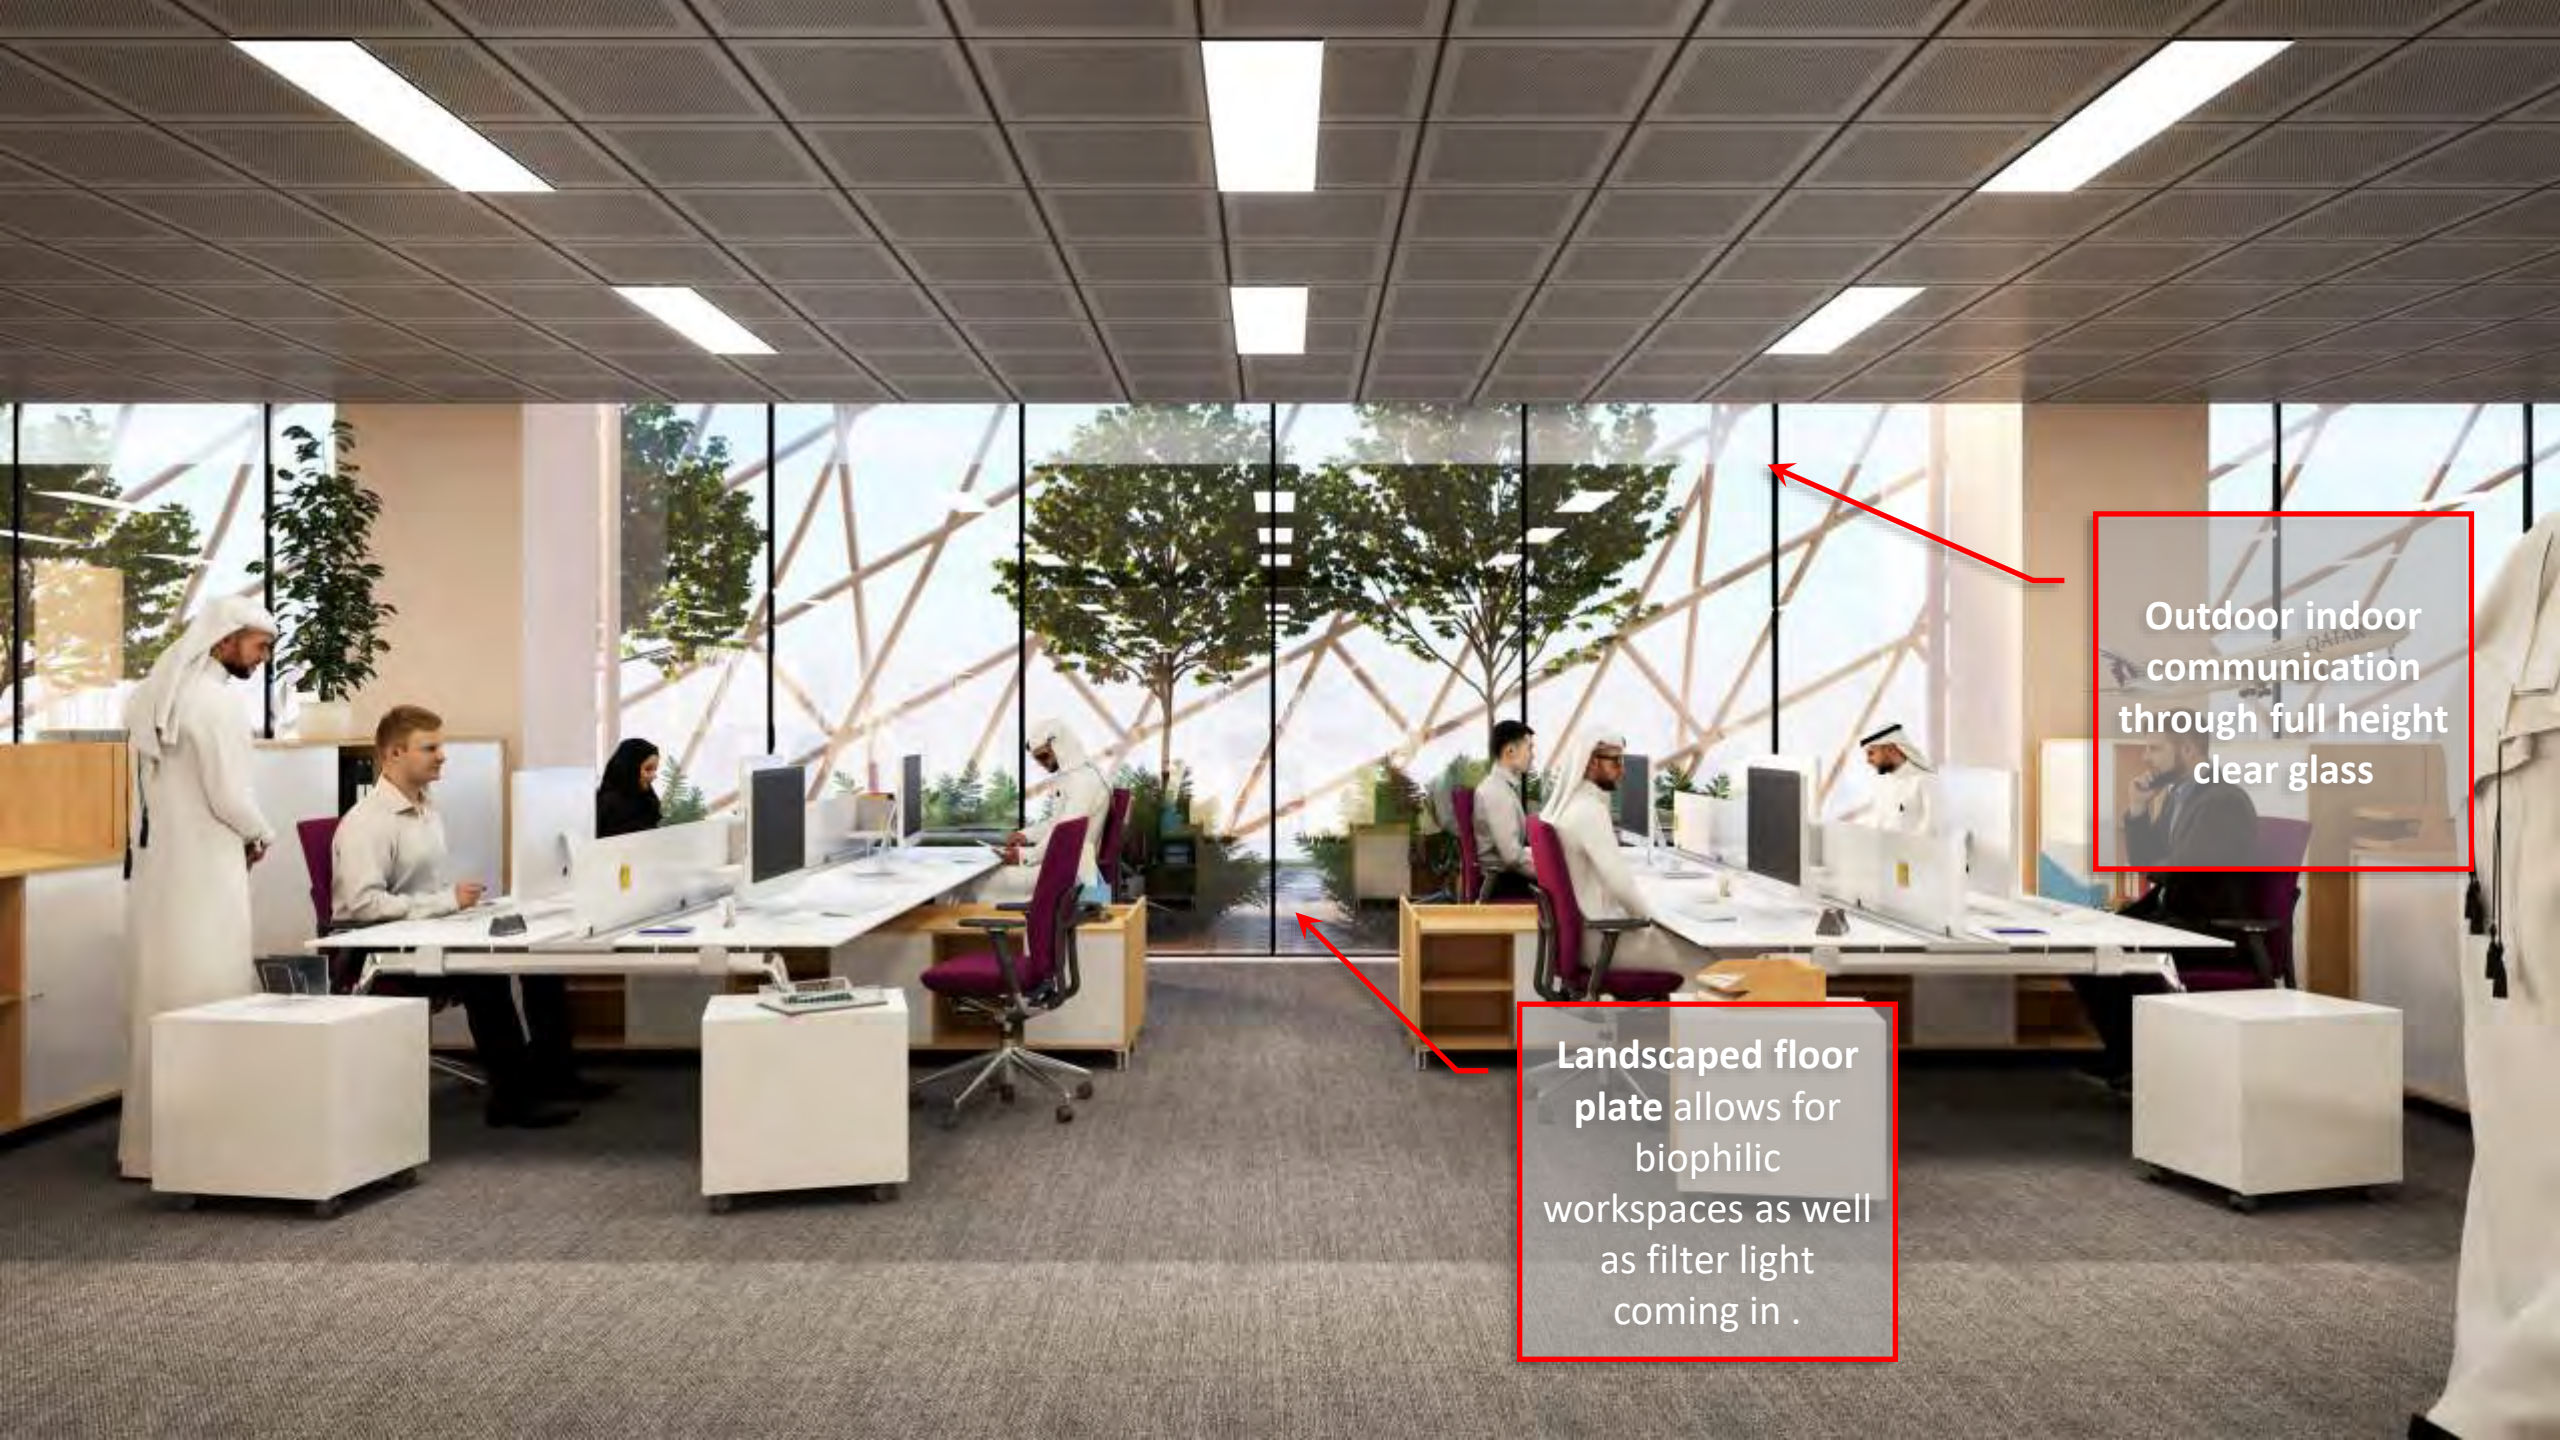

Double skin protects from direct **solar incidence** by creating a green **bufferzone**

Double skin aids in building **ventilation** and cooling via chimney effect

Green spaces in **between** skins allows for indoor outdoor **visual transition**

Bringing the
greenery into the
workspace

Outdoor indoor communication through full height clear glass

Landscaped floor plate allows for biophilic workspaces as well as filter light coming in .
