Design Criteria

Parking Practicality

Due to **security constraints**, underground parking beneath the convention centre is not recommended. While the Hotel, Exhibition Centre, and Mall will have their own parking to reduce walking distance , **a separate building will serve as extra parking bloc serving mainly the Convention Centre located strategically as it requires extra demand .** this will allow each structure to be **built in phases or by different contractors.**

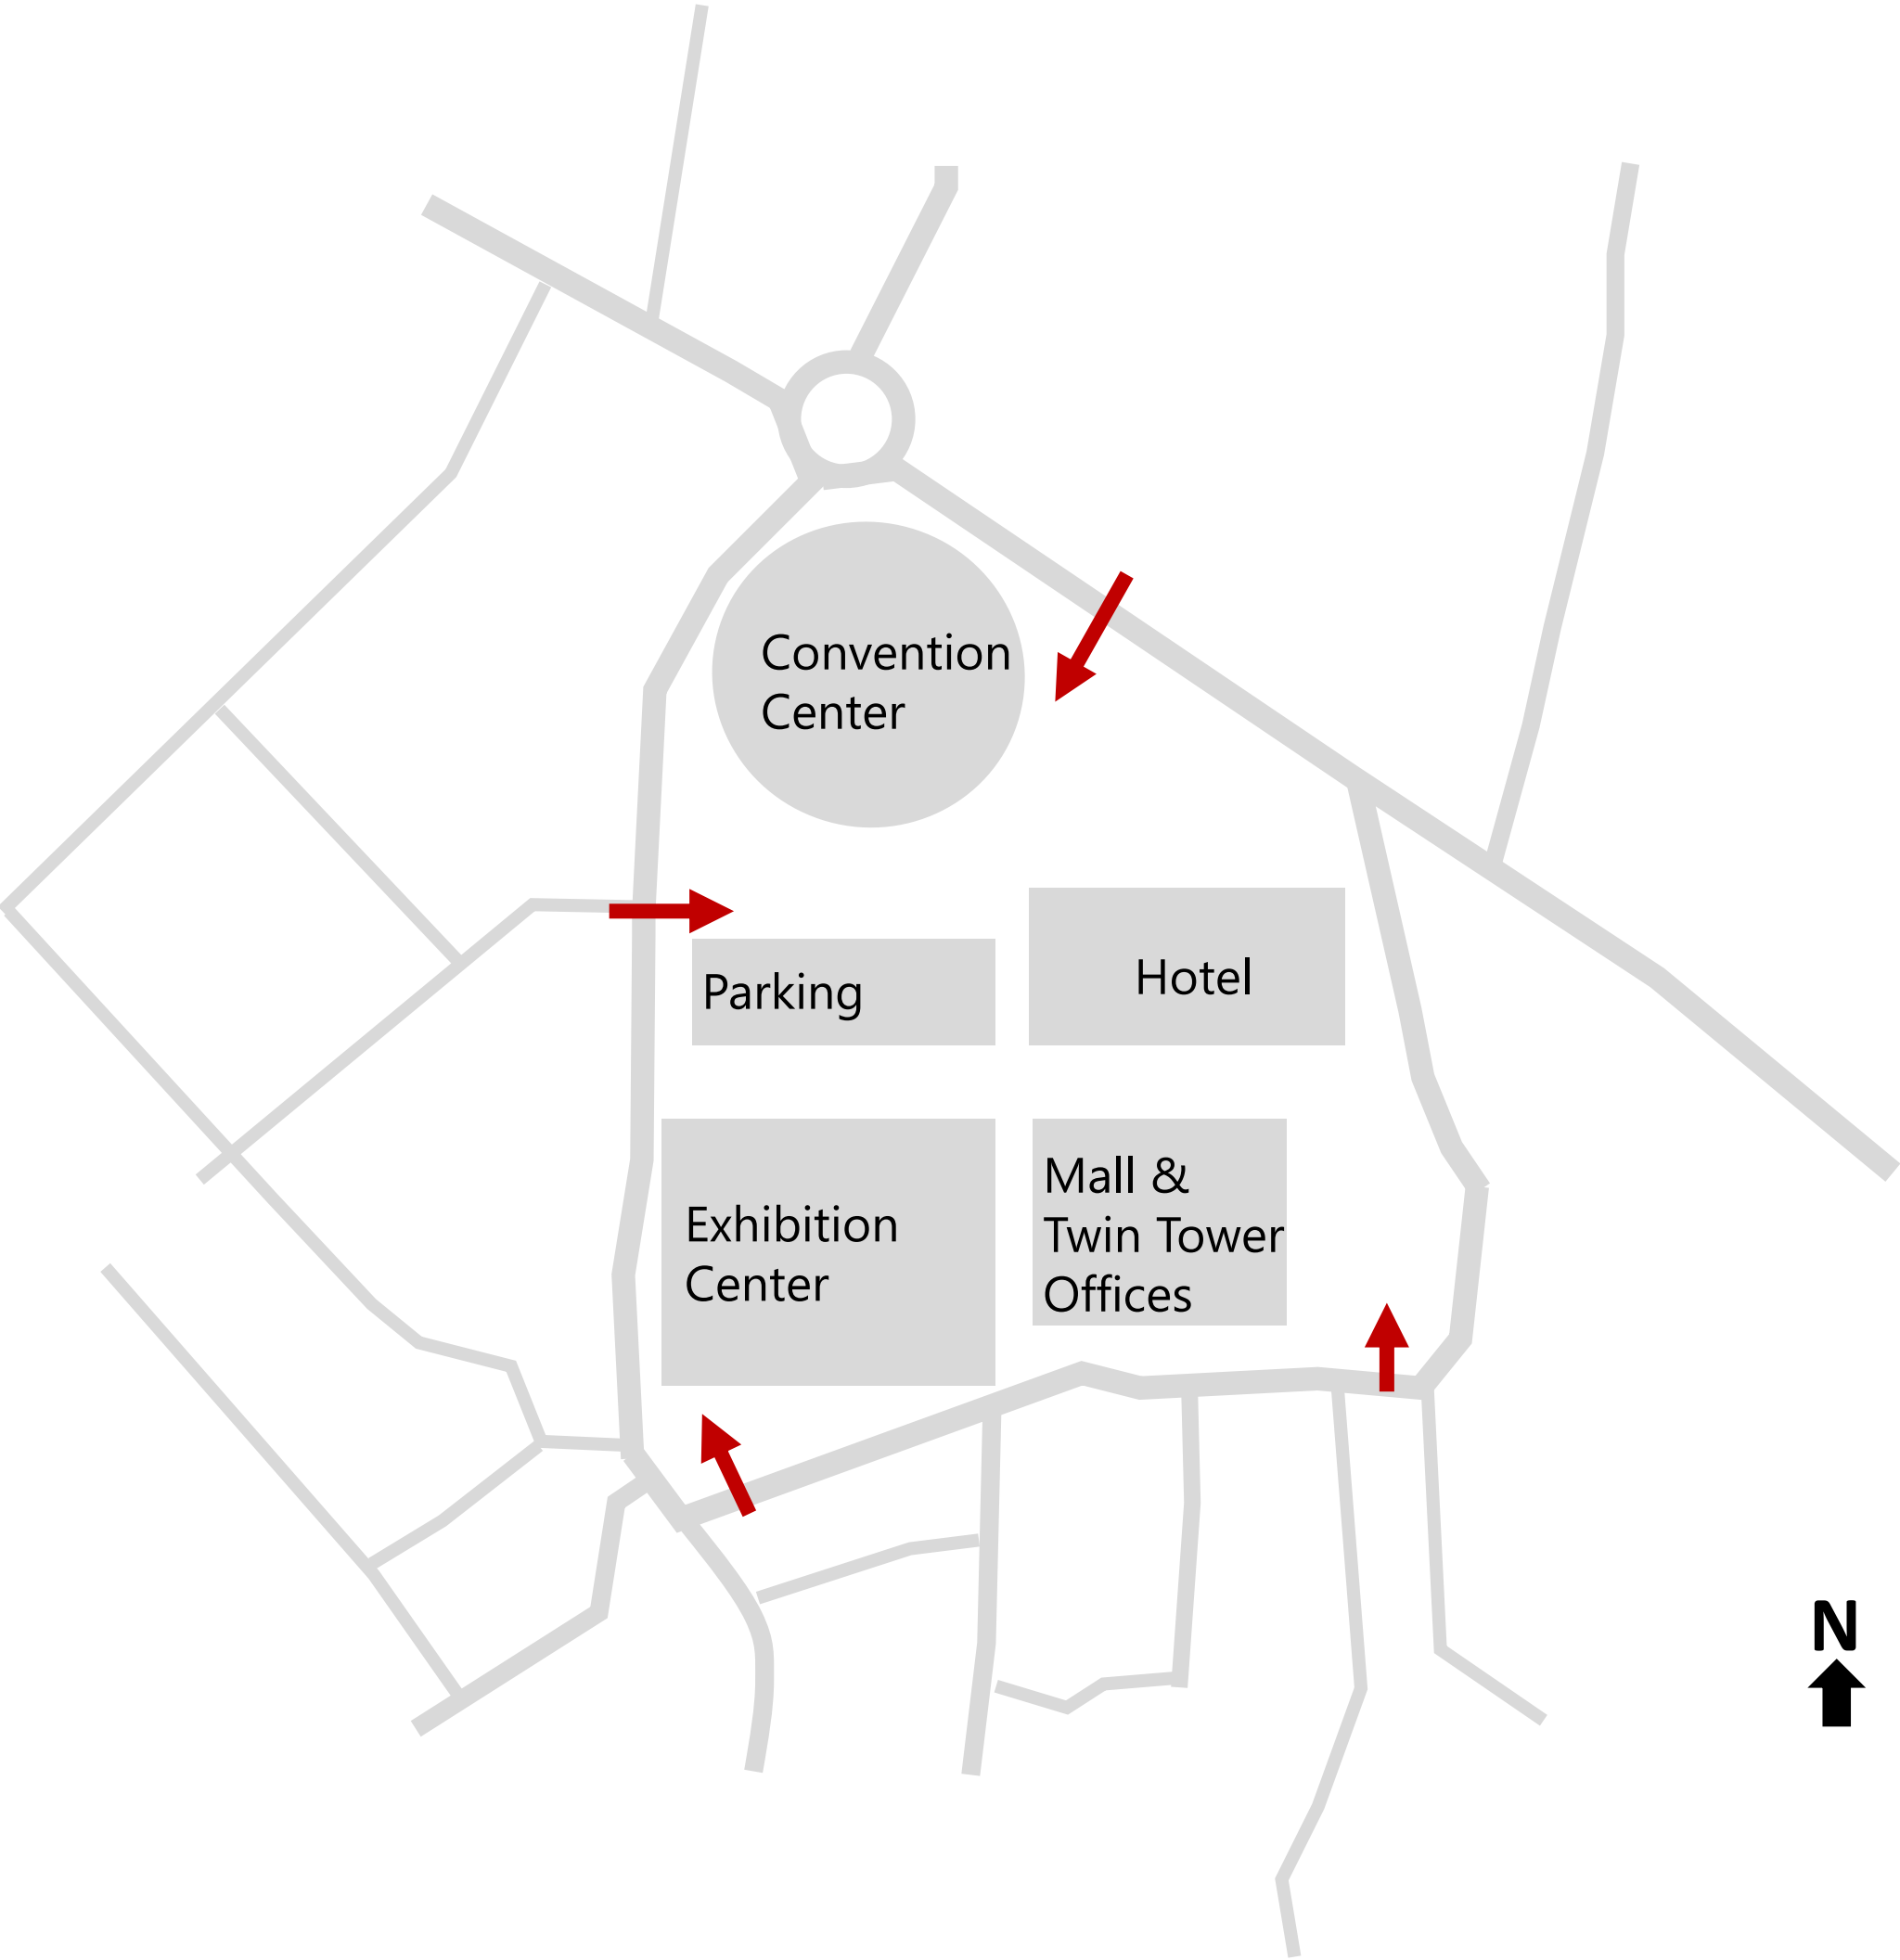

BUILDING	NUMBER OF CARS
Hotel	445
Mall & Twin Tower Offices	404
Exhibition Centre	533
Parking Building	1100

An aerial photograph of a building complex, possibly a university campus, with a stylized white line drawing overlay. The drawing highlights the building's footprint and internal structure, including a large circular building on the left and several rectangular buildings in the center and right. The background is a dense, textured pattern of green and brown, representing vegetation. In the bottom left corner, there is a white line drawing of a stylized plant or tree.

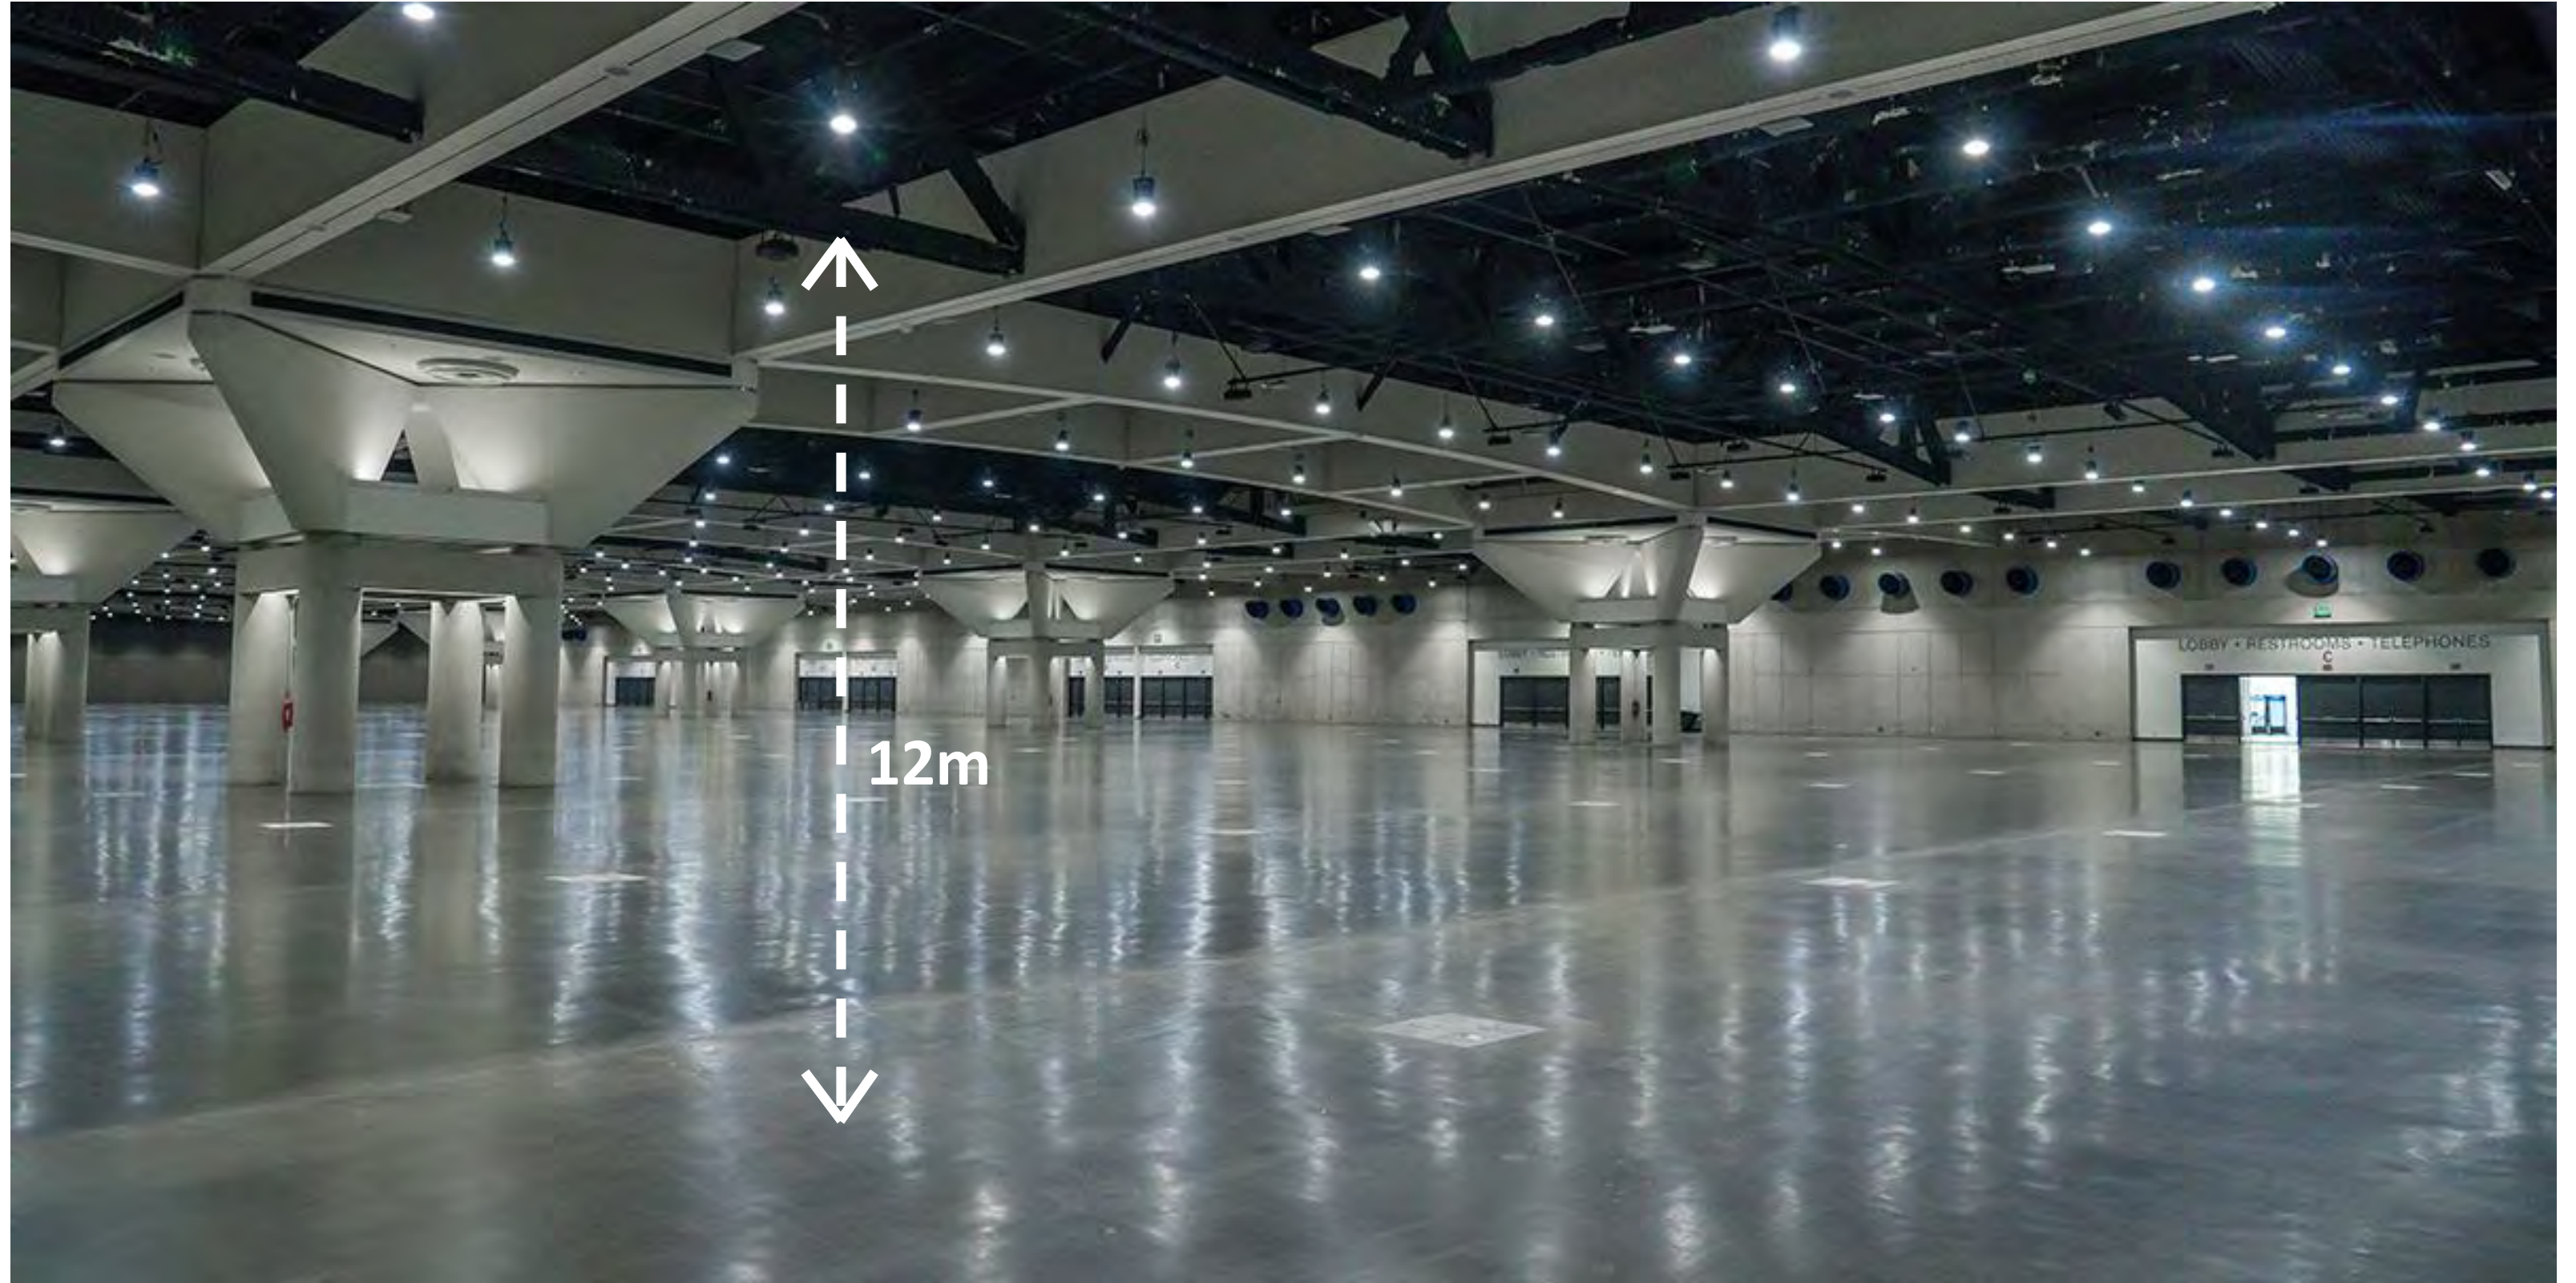

Exhibition Center

Buildings

Exhibition Center

An architectural rendering of a modern office complex. The central focus is a tall, dark, angular tower with a grid-like facade of windows. To its right is another tall, lighter-colored tower with a more traditional rectangular form and a circular feature at the top. The base of the towers is integrated with a multi-level commercial or public space featuring glass-fronted buildings and walkways. The entire development is situated in a landscape with green trees in the foreground and rocky, hilly terrain in the background under a blue sky with scattered clouds.

Mall & Twin Tower Offices

An architectural rendering of a modern office complex. The scene features two prominent towers: one with a stepped, angular design and a glass facade, and another with a more traditional rectangular form. A large, open plaza or mall area is situated in the foreground, surrounded by lush greenery and trees. The sky is dark with some clouds, and the overall lighting suggests a dusk or dawn setting.
